

ACADEMIC REGULATIONS, COURSE STRUCTURE AND DETAILED SYLLABUS

For

B.Tech

ELECTRICAL AND ELECTRONICS ENGINEERING

(Applicable for batches admitted from 2016-17)

PRAGATI ENGINEERING COLLEGE
(AUTONOMOUS)

Permanently Affiliated to JNTUK, Kakinada, Accredited by NAAC with “A” Grade Recognized
by UGC 2(f) and 12(b) under UGC act, 1956
1-378, ADB Road, Surampalem – 533 437
Near Peddapuram, E.G.Dist, Andhra Pradesh

PRAGATI ENGINEERING COLLEGE : SURAMPALEM **(Autonomous)**

Vision of the Institute:

To emerge as a Premier Institution for Technical Education in the Country through Academic Excellence and to be recognized as a Centre for Excellence in Research & Development, catering to the needs of our Country.

Mission of the Institute:

To realize a strong Institution by consistently maintaining State-of-art-infrastructure and building a cohesive, World Class Team and provide need based Technical Education, Research and Development through enhanced Industry Interaction.

Vision of the Department:

To excel in Engineering Education and Research, inculcating professional and social ethics among the students through academic excellence in the field of Electrical & Electronics Engineering.

Mission of the Department:

M1: To impart quality Technical Education with good infrastructure for students to make them globally competent and technically strong.

M2: To collaborate with industries and academic institutions to enhance creativity and innovation with professional and ethical values.

M3: To motivate faculty and students to do impactful research on societal needs and to build team work among them.

Program Educational Objectives (PEOs):

PEO1

To produce graduates with a strong foundation in the Basic Sciences, Mathematics, Computing and core knowledge in Electrical and Electronics Engineering through high quality Technical Education.

PEO2

To prepare graduates for successful and productive engineering careers, with emphasis on technical competency and with an attention to serve the needs of core and associated sectors by developing novel products and solutions for the real-time problems in a socio-economic way.

PEO3

To inculcate ethical attitude, honing effective communication skills and managerial skills to work in a multidisciplinary environment as a technocrat/administrator/entrepreneur and to acquire the knowledge for pursuing advanced degrees in Engineering, Science, Management, Research and Development.

Program Outcomes (POs):

1. Engineering Knowledge: Apply the knowledge of Mathematics, Science, Engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. Problem Analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of Mathematics, Natural Sciences, and Engineering Sciences.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM (Autonomous)

3. Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs):

Engineering Students will be able to:

PSO1: Apply the concepts of Power Systems, Power Electronics and utilization of Renewable Energy in implementation of interdisciplinary projects.

PSO2: Acquire the knowledge of Electrical and Electronics Engineering to participate in national and international competitive examinations for successful higher studies and employment.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

ACADEMIC REGULATIONS FOR B.TECH (REGULAR)

Applicable for the students of B.Tech (Regular) Admitted from the academic year 2016-2017.

1. AWARD OF B.TECH DEGREE

A Student will be declared eligible for the award of B.Tech Degree if he fulfills the following academic regulations.

A Student shall be declared eligible for the award of the B.Tech Degree, if he pursues a course of study for not less than four and for not more than eight academic years.

The candidate shall register for 180 credits and secure all the 180 credits.

2. COURSES OF STUDY

The following courses of study are offered at present as specializations for the B.Tech course with English as medium of instruction.

<i>S. No.</i>	<i>Branch / Course</i>
01.	Civil Engineering (CE)
02.	Electrical and Electronics Engineering (EEE)
03.	Mechanical Engineering (ME)
04.	Electronics and Communications Engineering (ECE)
05.	Computer Science and Engineering (CSE)
06.	Information Technology (IT)

3. MINIMUM INSTRUCTIONS DAYS.

The minimum instruction days for each semester shall be 90 working days

4. PROGRAMME/ COURSE CREDITS

Each discipline / course of the four year B.Tech programme is designed to have a total of 180 credits. Depending upon the nature of each subject and the number of periods of instruction whether it is theory, laboratory, drawing etc., weightages are given in terms of number of credits. See course structure for details.

5. ATTENDANCE REQUIREMENTS :

A student is eligible to appear for the End semester examinations only if he puts in a minimum of 75% of attendance in aggregate of all the subjects.

Condonation of shortage of attendance in the aggregate upto 10% (65% and above and below 75%) in each semester may be granted by a committee appointed for this purpose, after getting satisfied that the absence is due to genuine reasons.

Shortage of attendance below 65% in aggregate shall not be condoned.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

A student who has shortage of attendance in a semester may seek readmission in to the course when offered next.

A fee stipulated by the college shall be paid along with the application for the condonation of shortage of attendance.

Students whose shortage of attendance is not condoned in any semester are not eligible to take their end examinations and the registration shall stand cancelled.

6. DISTRIBUTION AND WEIGHTAGE OF MARKS

The performance of a student in each semester shall be evaluated subject-wise with a maximum of 100 marks. 40 marks for internal evaluation and 60 marks for the end examination have been earmarked. The Project Work shall be evaluated for 200 marks. The mini project/Term Paper/Seminar has a weightage of 50 marks and evaluated internally.

Depending upon the nature of the subject, the distribution and weightages for internal and external assessment are as detailed below:

Theory Subjects

i. Internal assessment : 40 marks

- a) For the Mid examinations there shall be two tests, one conducted in the middle and the other at the end of each semester. The duration of each test is two hours. The question paper contains **Part-A** and **Part-B**. Part-A consists of three questions. Out of three questions two questions carry seven marks and one question carry six marks. Part-B consists of twenty objective type questions each carry half mark. Answering all questions is compulsory.
- b) Students shall submit assignments at the end of each unit in the syllabus and the marks allotted for the assignments is 10.
- c) The formula for finding the total marks of internal assessment (40 marks) = $0.80 \times \text{higher marks scored between the two internal tests} + 0.20 \times \text{marks scored in the other test} + \text{marks for the assignments}$.

ii. External assessment :

- a) The end semester examination is of 3 hours duration and contains **Part A** and **Part B**. It covers all the topics in all the 6 units and the weightage is 60 marks.
- b) Part A consists of 6 short questions each carrying 2 marks ($6 \times 2 = 12$ marks). These 6 questions are compulsory and cover all the 6 units in the syllabus.
- c) Part B consists of 6 essay type / numerical questions, One question is set from each unit in the syllabus. Some questions may have sub sections. The student has to answer 4 out of 6 questions, each question with a weightage of 12 marks ($4 \times 12 = 48$ marks).

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

Laboratory Courses

i. Internal assessment : 40 marks

There shall be continuous evaluation during the semester for 40 marks as shown below:

Day-to-Day work and laboratory record	-	25 marks
One internal test at the end of the semester	-	15 marks
Total		- 40 Marks

ii. External Assessment :

At the end of the semester an examination for 3 hours duration shall be conducted for 60 marks by the concerned teacher and an external examiner.

Subjects such as Engineering Graphics, Engineering Drawing, Machine Drawing, Design and Drawing of R.C. Structures, Steel structures, Irrigation structures, Estimation cost and valuation, Building Planning and Drawing etc.

i. Internal assessment : 40 marks

a) There shall be continuous evaluation with a weightage of 40 marks as shown below :

Day-to-Day work - 20 marks

b) Internal tests :

There shall be two internal tests One in the middle of the semester and the other at the end. Marks for Internal Tests = $0.8 \times$ higher marks scored between the two tests + $0.2 \times$ marks scored in the other test.

- 20 marks

Total - 40 Marks

ii. External assessment :

Same as for theory subjects given in 6.1.ii.

Mini Project /Term paper

There shall be a Mini Project/Term paper in the III year I / II semester. It has a weightage of 50 marks and evaluated internally at the end of the semester.

Project

Out of a total of 200 marks for the Project work, 60 marks shall be for Internal Evaluation and 140 marks for the End Semester Examination. The End Semester Examination (Viva-voce) shall be conducted by the committee. The committee consists of an external examiner, Head of the Department and Supervisor of the

PRAGATI ENGINEERING COLLEGE : SURAMPALEM (Autonomous)

Project. The Evaluation of project work shall be conducted at the end of the IV year. The Internal Evaluation shall be on the basis of two seminars given by each student on the topic of his project and evaluated by an internal committee.

Seminar

For the Seminar, Each student has to be evaluated based on the presentation of any latest topic with a report of 10-15 pages and a power point presentation of minimum 10 slides. The student shall collect the information on a specialized topic and prepare a technical report, showing his understanding of the topic, and submit to the department, which shall be evaluated by the Departmental committee consisting of Head of the Department, seminar supervisor and a senior faculty member. The seminar report shall be evaluated for 50 marks. There shall be no external examination for seminar.

7. MINIMUM ACADEMIC REQUIREMENTS

The following academic requirements have to be satisfied in addition to the attendance requirements mentioned under rule 5.

A Student is deemed to have satisfied the minimum academic requirements if he has **earned the credits allotted to each theory / practical design / drawing subject by securing not less than 35% of marks in the end semester exam, and minimum 40% of marks in the sum total of the internal marks and end semester examination marks.**

A Student is deemed to have satisfied the minimum academic requirements if he has **earned the credits allotted to each laboratory / project by securing not less than 40% of marks in the end semester exam, and minimum 50% of marks in the sum total of the internal marks and end semester examination marks.**

A student is deemed to have satisfied the minimum academic requirements if he has earned the credits allotted to mini project/term paper and seminar by securing not less than 50% of Marks.

A student shall register and put in minimum attendance in all 180 credits and earn all 180 credits.

8. COURSE PATTERN

The entire course of study is for four academic years, all the years are on semester pattern.

A student eligible to appear for the end semester examination in a subject, but absent or failed in the end semester examination, may write the examination in that subject when conducted next.

When a student is detained due lack of credits / shortage of attendance, he may be re-admitted into the same semester / year in which he has been detained. However, the academic regulations under which he was first admitted shall continue to be applicable to him.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

9. PROMOTION TO NEXT HIGHER CLASS

A Student shall be promoted from 1st year to II year if he fulfills the minimum attendance requirement under rule 5.

A Student shall be promoted from II year to III year, if he fulfills the academic requirement of 50% of the credits upto II year II semester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in II year II semester.

A student shall be promoted from III year to IV year if he fulfills the academic requirements of 50% of the credits upto III year II semester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in III year II semester.

10. CUMULATIVE GRADE POINT AVERAGE (CGPA)

Theory/Design/ Drawing (%)	Laboratory/Mini Project/Term Paper/ Project/ Seminar (%)	Letter Grade	Level	Grade Point
≥ 90	≥ 90	O	Outstanding	10
≥ 80 to < 90	≥ 80 to < 90	S	Excellent	9
≥ 70 to < 80	≥ 70 to < 80	A	Very Good	8
≥ 60 to < 70	≥ 60 to < 70	B	Good	7
≥ 50 to < 60	≥ 50 to < 60	C	Fair	6
≥ 40 to < 50	--	D	Satisfactory	5
<40	<50	F	Fail	0
			Absent	0

Computation of Semester Grade Point Average (SGPA)

The following procedure is to be adapted to compute the Semester Grade Point Average. (SGPA) and Cumulative Grade Point Average (CGPA).

The **SGPA** is the ratio of sum of product of the number of credits with the grade points scored by a student in all the courses taken by a student and the sum of the number of credits of all the courses undergone by a student i.e.

$$\text{SGPA (Si)} = \sum (C_i \times G_i) / \sum C_i$$

Where C_i is the number of credits of the i^{th} course and G_i is the grade point scored by the student in the i^{th} course.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

Computation of CGPA

- The **CGPA** is also calculated in the same manner taking into account all the courses undergone by a student over all the semester of a programme i.e.,

$$\text{CGPA} = \sum (C_i \times S_i) / \sum C_i$$

- Where S_i is the SGPA of the i^{th} semester and C_i is the total number of credits in that semester.
- The SGPA and CGPA shall be rounded off to 2 decimal points and reported in the transcripts.
- Equivalent Percentage = $(\text{CGPA} - 0.75) \times 10$

11. AWARD OF CLASS

After a student has satisfied the requirements prescribed for the completion of the program and is eligible for the award of B.Tech Degree, he shall be placed in one of the following four classes.

Class Awarded	CGPA to be secured	From the CGPA secured from 180 credits
First Class with Distinction	≥ 7.75 (Without any Supplementary Appearance)	
First Class	≥ 6.75 to < 7.75	
Second Class	≥ 5.75 to < 6.75	
Pass Class	≥ 4.75 to < 5.75	

12. WITHHOLDING OF RESULTS :

If the students has not paid the dues, if any, to the college or if any case of indiscipline or malpractice is pending against him, the examination results of the student will be withheld.

13. TRANSITORY REGULATIONS:

For Re-admitted Candidates:

- A student who is following JNTUK curriculum and detained due to shortage of attendance at the end of the first semester of first year shall join the autonomous batch of first year first semester. Such students shall study all the courses prescribed for the batch in which the student joins and considered on par with regular candidates of Autonomous stream and will be governed by the autonomous regulations.
- A student who is following JNTUK curriculum, detained due to lack of credits or shortage of attendance at the end of the second semester of first year or at the subsequent semesters shall join with the autonomous batch in the appropriate semester. Such candidates shall be required to pass in all the courses in the Programme prescribed by the Board of Studies concerned for

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

that batch of students from that semester onwards to be eligible for the award of degree.

- iii) However, exemption will be given in the courses of the semester(s) of the batch which he had passed earlier and substitute subjects will be offered in place of them as decided by the Board of Studies.
- iv) The student has to clear all his backlog subjects up to previous semester by appearing for the supplementary examinations conducted by JNTUK for the award of degree. The total number of credits to be secured for the award of the degree will be sum of the credits up to previous semester under JNTUK regulations and the credits prescribed for the semester in which a candidate seeks readmission and subsequent semesters under the autonomous stream. The class will be awarded based on the academic performance of a student in the autonomous pattern.
- v) In case the students who do not have option of acquiring required credits with the existing courses offered as per the curriculum under autonomy, credit balance can be achieved by clearing the additional courses offered. The additional courses that are offered can be of theory or laboratory courses.

Transfer candidates (from non-autonomous college affiliated to JNTUK):

- i) A student who is following JNTUK curriculum, transferred from other college to this college in second year first semester or subsequent semesters shall join with the autonomous batch in the appropriate semester. Such candidates shall be required to pass in all the courses in the Programme prescribed by the Board of Studies concerned for that batch of students from that semester onwards to be eligible for the award of degree.
- ii) However, exemption will be given in the courses of the semester(s) of the batch which he had passed earlier and substitute subjects are offered in their place as decided by the Board of Studies.
- iii) The student has to clear all his backlog subjects up to previous semester by appearing for the supplementary examinations conducted by JNTUK for the award of degree. The total number of credits to be secured for the award of the degree will be the sum of the credits upto previous semester under JNTUK regulations and the credits prescribed for the semester in which a candidate joined after transfer and subsequent semesters under the autonomous stream. The class will be awarded based on the academic performance of a student in the autonomous pattern.
- iv) In case the students who do not have option of acquiring required credits with the existing courses offered as per the curriculum under autonomy, credit balance can be achieved by clearing the additional courses offered. The additional courses that are offered can be of theory or laboratory courses.

Transfer candidates (from an autonomous college affiliated to JNTUK):

- i) A student who has secured the required credits upto previous semesters as per the regulations of other autonomous institutions shall also be permitted to be transferred to this college.
- ii) A student who is transferred from the other autonomous colleges to this college in second year first semester or subsequent semesters shall join with the autonomous batch in the appropriate semester. Such candidates shall be

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

required to pass in all the courses in the Programme prescribed by the Board of Studies concerned for that batch of students from that semester onwards to be eligible for the award of degree.

- iii) However, exemption will be given in the courses of the semester(s) of the batch which he had passed earlier and substitute subjects are offered in their place as decided by the Board of Studies. The total number of credits to be secured for the award of the degree will be the sum of the credits upto previous semester as per the regulations of the college from which he is transferred and the credits prescribed for the semester in which a candidate joined after transfer and subsequent semesters under the autonomous stream. The class will be awarded based on the academic performance of a student in the autonomous pattern.
- iv) In case the students who do not have option of acquiring required credits with the existing courses offered as per the curriculum under autonomy, credit balance can be achieved by clearing the additional courses offered. The additional courses that are offered can be of theory or laboratory courses.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

ACADEMIC REGULATIONS FOR B.TECH LATERAL ENTRY SCHEME (LES)

Applicable for the students admitted into II year B.Tech I semester from the Academic year 2017-18.

1. AWARD OF B.TECH DEGREE

A Student will be declared eligible for the award of B.Tech Degree if he fulfills the following academic regulations.

A Student shall be declared eligible for the award of the B.Tech Degree, if he pursues a course of study for not less than three academic years and not more than six academic years.

1.2 The candidate shall register for 132 credits and secure all the 132 credits.

2. The attendance regulations of B.Tech (Regular) shall be applicable to B.Tech (LES) students as well.

3 PROMOTION RULES

A Student shall be promoted from II year to III year, if he fulfills the minimum attendance requirement under rule 5 of B.Tech (Regular).

A student shall be promoted from III year to IV year if he fulfills the academic requirements of 50% of the credits upto III year II semester from all the examinations, whether or not the candidate takes the examinations and secures prescribed minimum attendance in III year II semester.

4. AWARD OF CLASS

After a student has satisfied the requirements prescribed for the completion of the program and is eligible for the award of B.Tech Degree, he shall be placed in one of the following four classes.

Class Awarded	CGPA to be secured	From the CGPA secured from 132 credits
First Class with Distinction	≥ 7.75 (Without any Supplementary Appearance)	
First Class	≥ 6.75 to < 7.75	
Second Class	≥ 5.75 to < 6.75	
Pass Class	≥ 4.75 to < 5.75	

5. All the other regulations as applicable to **B.Tech 4-year degree course (Regular)** will hold good for **B.Tech (Lateral Entry Scheme)** also.

GENERAL :

- i) Whenever the words “he”, “him”, “his” secure in the regulations, they include “she”, “her”, “hers”.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

- ii) The academic rules and regulations should be read as a whole for the purpose of interpretation.
- iii) In case of any doubt or ambiguity in the interpretation of rules, the decision of the Principal of the college is final.
- iv) The college may change or amend the academic rules and regulations or syllabi at any time and the changed rules come into effect from the date of issue of such orders.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

MALPRACTICES RULES

The rules laid down in JNTUK R16 regulations will be followed into to.

MALPRACTICES RULES

DISCIPLINARY ACTION FOR / IMPROPER CONDUCT IN EXAMINATIONS

	Nature of Malpractices/Improper Conduct	Punishment
	<i>If the candidate:</i>	
1. (a)	Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, Cell phones, pager, palm computers or any other form of material concerned with or related to the subject of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the candidate which can be used as an aid in the subject of the examination)	Expulsion from the examination hall and cancellation of the performance in that subject only.
(b)	Gives assistance or guidance or receives it from any other candidate orally or by any other body language methods or communicates through cell phones with any candidate or persons in or outside the exam hall in respect of any matter.	Expulsion from the examination hall and cancellation of the performance in that subject only of all the candidates involved. In case of an outsider, he will be handed over to the police and a case is registered against him.
2.	Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to the subject of the examination (theory or practical) in which the candidate is appearing.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted to appear for the remaining examinations of the subjects of that Semester/year. The Hall Ticket of the candidate is to be cancelled and sent to the University.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

3.	Impersonates any other candidate in connection with the examination.	The candidate who has impersonated shall be expelled from examination hall. The candidate is also debarred and forfeits the seat. The performance of the original candidate who has been impersonated, shall be cancelled in all the subjects of the examination (including practicals and project work) already appeared and shall not be allowed to appear for examinations of the remaining subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat. If the imposter is an outsider, he will be handed over to the police and a case is registered against him.
4.	Smuggles in the Answer book or additional sheet or takes out or arranges to send out the question paper during the examination or answer book or additional sheet, during or after the examination.	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
5.	Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners or writes to the examiner requesting him to award pass marks.	Cancellation of the performance in that subject.
6.	Refuses to obey the orders of the Chief Superintendent/Assistant – Superintendent / any officer on duty or misbehaves or creates disturbance of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the officer-in charge or any person on duty in or outside the examination hall of any injury to his person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the officer-in-charge, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which	In case of students of the college, they shall be expelled from examination halls and cancellation of their performance in that subject and all other subjects the candidate(s) has (have) already appeared and shall not be permitted to appear for the remaining examinations of the subjects of that semester/year. The candidates also are debarred and forfeit their seats. In case of outsiders, they will be handed over to the police and a police case is registered against them.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

	result in damage to or destruction of property in the examination hall or any part of the College campus or engages in any other act which in the opinion of the officer on duty amounts to use of unfair means or misconduct or has the tendency to disrupt the orderly conduct of the examination.	
7.	Leaves the exam hall taking away answer script or intentionally tears of the script or any part thereof inside or outside the examination hall.	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
8.	Possess any lethal weapon or firearm in the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat.
9.	If student of the college, who is not a candidate for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in clause 6 to 8.	Student of the colleges expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat. Person(s) who do not belong to the College will be handed over to police and, a police case will be registered against them.
10.	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

11.	Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny.	Cancellation of the performance in that subject and all other subjects the candidate has appeared including practical examinations and project work of that semester/year examinations.
12.	If any malpractice is detected which is not covered in the above clauses 1 to 11 shall be reported to the University for further action to award suitable punishment.	

Malpractices identified by squad or special invigilators

1. Punishments to the candidates as per the above guidelines.
2. Punishment for institutions : (if the squad reports that the college is also involved in encouraging malpractices)
 - (i) A show cause notice shall be issued to the college.
 - (ii) Impose a suitable fine on the college.
 - (iii) Shifting the examination centre from the college to another college for a specific period of not less than one year.

L T P C
3 1 0 3

Subject Code: 16BH1T01

ENGLISH – I

Introduction:

In view of the growing importance of English as a tool for global communication and the consequent emphasis on training the students have to acquire communicative competence, the syllabus has been designed to develop linguistic and communicative competence of the students of Engineering. As far as the detailed Textbooks are concerned, the focus should be on the skills of listening, speaking, reading and writing. The non-detailed Textbooks are meant for extensive reading for pleasure and profit. Thus, the stress in the syllabus is primarily on the development of communicative skills and fostering of ideas.

Course Objectives:

To improve the language proficiency of the students in English with emphasis on LSRW skills.

1. To enable the students to study and comprehend the prescribed lessons and subjects more effectively relating to their theoretical and practical components.
2. To develop the communication skills of the students in both formal and informal situations.

Course Outcomes : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Enables the learners to acquire knowledge in different fields besides the acquisition of Reading and Writing skills to apply in their real life situations.	Applying
CO2	Explains the learners about transport and road safety methods to make use of them in that phenomenon and extends their reading and writing skills.	Understanding
CO3	Creates awareness on importance of mass production in the survival of mankind and strengthens them in reading and writing aspects.	Understanding
CO4	Helps the learners to identify the required sources of energy for rural India and practice their reading and writing skills.	Analyzing
CO5	Creates awareness in the readers on ecological system and supports the learners in improving reading and writing skills.	Creating
CO6	Prepares the learners to have an industrial etiquette and training and promotes their reading and writing skills.	Applying

Mapping of COs with POs and PSOs

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

LISTENING SKILLS:

Objectives:

1. To enable the students to appreciate the role of listening skill and improve their pronunciation.
2. To enable the students to comprehend the speech of people belonging to different backgrounds and regions.
3. To enable the students to listen for general content, to fill up information and for specific information.

SPEAKING SKILLS:

Objectives:

1. To make the students aware of the importance of speaking for their personal and professional communication.
2. To enable the students to express themselves fluently and accurately in social and professional success.
3. To help the students describe objects, situations and people.
4. To make the students participate in group activities like role-plays, discussions and debates.
5. To make the students participate in Just a Minute talks.

READING SKILLS:

Objectives:

1. To enable the students to comprehend a text through silent reading.
2. To enable the students to guess the meanings of words, messages and inferences of texts in given contexts.
3. To enable the students to skim and scan a text.
4. To enable the students to identify the topic sentence.
5. To enable the students to identify discourse features.
6. To enable the students to make intensive and extensive reading.

WRITING SKILLS:

Objectives:

1. To make the students understand that writing is an exact formal skills.
2. To enable the students to write sentences and paragraphs.
3. To make the students identify and use appropriate vocabulary.
4. To enable the students to narrate and describe.
5. To enable the students capable of note-making.
6. To enable the students to write coherently and cohesively.
7. To make the students to write formal and informal letters.
8. To enable the students to describe graphs using expressions of comparison.
9. To enable the students to write technical reports.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

Methodology:

1. The classes are to be learner-centred where the learners are to read the texts to get a comprehensive idea of those texts on their own with the help of the peer group and the teacher.
2. Integrated skill development methodology has to be adopted with focus on individual language skills as per the tasks/exercise.
3. The tasks/exercises at the end of each unit should be completed by the learners only and the teacher intervention is permitted as per the complexity of the task/exercise.
4. The teacher is expected to use supplementary material wherever necessary and also generate activities/tasks as per the requirement.
5. The teacher is permitted to use lecture method when a completely new concept is introduced in the class.

DETAILED TEXTBOOKS:

- *ENGLISH FOR ENGINEERS AND TECHNOLOGISTS*, Published by Orient Blackswan Pvt Ltd
- *THE COP AND THE ANTHEM BY O. HENRY* PUBLISHED BY PERFECTION LEARNING

NON-DETAILED TEXTBOOK:

- *-PANORAMA: A COURSE ON READING*, Published by Oxford University Press India

The course content along with the study material is divided into six units.

UNIT I:

1. 'Human Resources' from *English for Engineers and Technologists*.

Objective:

To develop human resources to serve the society in different ways.

Outcome:

The lesson motivates the readers to develop their knowledge different fields and serve the society accordingly.

2. 'An Ideal Family' from *Panorama: A Course on Reading*

Objective:

To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:

Acquisition of writing skills

UNIT 2:

1. 'Transport: Problems and Solutions' from *English for Engineers and Technologists*.

Objective:

To highlight road safety measures whatever be the mode of transport.

Outcome:

The lesson motivates the public to adopt road safety measures.

2. 'War' from 'Panorama : A Course on Reading'

Objective:

To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:

Acquisition of writing skills

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

3(A):

1. *'Evaluating Technology' from English for Engineers and Technologists.*

Objective:

To highlight the advantages and disadvantages of technology.

Outcome:

The lesson creates an awareness in the readers that mass production is ultimately survival.

2. *'The Verger' from 'Panorama : A Course on Reading'*

Objective:

To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:

Acquisition of writing skills

Unit 3(B)

- 1. *THE COP AND THE ANTHEM BY O.HENRY*

Objective:

To enable students to develop interest in reading and appreciating short stories of different genres.

Outcome:

This lesson motivates students to respond and express the ideas and feelings in the story through oral, written and performative means.

UNIT 4:

1. *'Alternative Sources of Energy' from English for Engineers and Technologists.*

Objective:

To bring into focus different sources of energy as alternatives to the depleting sources.

Outcome:

The lesson helps to choose a source of energy suitable for rural India.

2. *'The Scarecrow' from Panorama : A Course on Reading*

Objective:

To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:

Acquisition of writing skills.

UNIT 5:

1. *'Our Living Environment' from English for Engineers and Technologists.*

Objective:

To highlight the fact that animals must be preserved because animal life is precious. Outcome:

The lesson creates an awareness in the reader as to the usefulness of animals for the human society.

2. *'A Village Host to Nation' from Panorama : A Course on Reading*

Objective:

To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:

Acquisition of writing skills

UNIT 6:

1. *'Safety and Training' from English for Engineers and Technologists.* Objective:

To highlight the possibility of accidents in laboratories, industries and other places and to follow safety measures.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

Outcome:

The lesson helps in identifying safety measures against different varieties of accidents at home and in the workplace.

2. *'Martin Luther King and Africa' from Panorama : A Course on Reading*

Objective:

To develop extensive reading skill and comprehension for pleasure and profit.

Outcome:

Acquisition of writing skills

NOTE:

All the exercises given in the prescribed lessons in both detailed and non-detailed textbooks relating to the theme and language skills must be covered.

(Autonomous)

I Year I Semester

L T P C
3 1 0 3

Subject Code: 16BH1T03

MATHEMATICS – I

Course Objectives:

1. The course is designed to equip the students with the necessary mathematical skills and techniques that are essential for an engineering course.
2. The skills derived from the course will help the student from a necessary base to develop analytic and design concepts.

Course Outcomes : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Solve the linear system of equations by using different methods.	Applying
CO2	Find the Eigen values and Eigen vectors and also finding inverse and power of a matrix by using Cayley - Hamilton theorem.	Applying
CO3	Find rank, index, signature and nature of a Quadratic form.	Applying
CO4	Solve first order differential equations and able to apply physical problems.	Applying
CO5	Solve higher order linear differential equations with constant coefficients.	Analyzing
CO6	Find partial derivative of different orders, maxima, minima of a function of two variables, three variables and functional dependence.	Understanding

Mapping of COs with POs and PSOs														
CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	3	2	-	-	-	-	-	-	-	-	-	-	-
CO2	3	3	2	-	-	-	-	-	-	-	-	-	-	-
CO3	3	3	1	-	-	-	-	-	-	-	-	-	-	-
CO4	3	3	3	-	-	-	-	-	-	-	-	-	-	-
CO5	3	3	3	-	-	-	-	-	-	-	-	-	-	-
CO6	3	3	2	-	-	-	-	-	-	-	-	-	-	-

UNIT I: Linear systems of equations

Rank-Echelon form-Normal form – Solution of linear systems – Gauss elimination – Gauss Jordan- Gauss Jacobi and Gauss Seidel methods.

Applications: Finding the current in electrical circuits.

UNIT II: Eigen values - Eigen vectors

Eigen values - Eigen vectors– Properties – Cayley-Hamilton theorem - Inverse and powers of a matrix by using Cayley-Hamilton theorem- Diagonalization.

Applications: Free vibration of a two-mass system.

UNIT III–Quadratic forms

Quadratic forms Reduction of quadratic form to canonical form – Rank - Positive, negative and semi definite- Index – Signature.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT IV: Differential equations of first order and first degree Linear-Bernoulli-Exact-Reducible to exact.

Applications: Newton's Law of cooling-Law of natural growth and decay-Orthogonal trajectories-Electrical circuits- Chemical reactions.

UNIT V: Linear differential equations of higher order

Non-homogeneous equations of higher order with constant coefficients with RHS term of the type e^{ax} , $\sin ax$, $\cos ax$, polynomials in x , $(x^2 + 1)^{-1}$ – Method of Variation of parameters. **Applications:** LCR circuit, Simple Harmonic motion.

UNIT VI: Partial differentiation

Introduction- Homogeneous function-Euler's theorem-Total derivative-Chain rule Generalized Mean value theorem for single variable (without proof)-Taylor's and McLaurin's series expansion of functions of two Variables – Jacobian – Functional dependence.

Applications: Maxima and Minima of functions of two variables without constraints and Lagrange's method (with constraints).

Text Books:

I year - I semester

Subject Code: 16BH1T12

APPLIED CHEMISTRY

Course Objectives:

1. Plastics are nowadays used in household appliances; they are also used as composites (FRP) in aerospace and automotive industries.
2. Fuels as a source of energy are a basic need of any industry, particularly industries like thermal power stations, steel industry, fertilizer industry etc., and hence are introduced to create awareness on the topics.
3. The basics for the construction of galvanic cells are introduced to have understanding on the concepts. Understanding on the concept of Corrosion and Mechanism of Corrosion with Theories like Electrochemical theory.
4. With the increase in demand for power and also with depleting sources of fossil fuels, the demand for alternative sources of fuels is increasing. Some of the prospective fuel sources are introduced and the study can create a better understanding on the Non –Conventional Energy Sources and Storage Devices.
5. Understanding of crystal structures will help to understand the conductivity, semiconductors and superconductors. Magnetic properties are also studied to have better Understanding.
6. With the increase in demand for power and also with depleting sources of fossil fuels, the demand for alternative sources of fuels is increasing. Some of the prospective fuel sources are introduced and the study can create a better understanding on the Non –Conventional Energy Sources and Storage Devices.

Course Outcomes : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	To have an understanding on the plastic materials and their suitable design for engineering applications.	Applying
CO2	To learn about various fuels and their calorific values for use in various industrial applications.	Analyzing
CO3	Create awareness on corrosion and its impacts and the causes and control of corrosion.	Creating
CO4	To create knowledge on nano materials, liquid crystals and super conductors and their applications to learn green chemistry and to identify the green technologies to be implemented in industry.	Understanding
CO5	To acquire knowledge on crystal structure, semiconductors, insulators for their effective applications.	Applying
CO6	To create awareness on non- conventional energy sources for effective utilization to minimize in the national wealth and environmental impacts.	Understanding

CO6	3	-	-	-	-	-	3	-	-	-	-	-	-	-

UNIT I: HIGH POLYMERS AND PLASTICS

Polymerisation:- Definition- Types of Polymers - Mechanism of polymerization- Stereo regular polymers- Methods of polymerization(emulsion and suspension)-Physical and Mechanical properties. Plastics as engineering materials: advantages and limitations- Thermoplastics and Thermosetting plastics Compounding and fabrication (Compression, Injection, Extrusion and Blown Techniques)- Preparation, properties and applications of polyethene, PVC, Bakelite Teflon, Poly methyl Methacrylate(PMMA) and polycarbonates

Elastomers :- Natural rubber- Disadvantages- Mastication - compounding and vulcanization -

Synthetic rubbers : Buna S, Buna N, Thiokol and polyurethanes - Applications of elastomers.

Composite materials & Fiber reinforced plastics - Biodegradable polymers - Conducting polymers.

UNIT II: FUEL TECHNOLOGY

Fuels – Definition –Classification - Characteristics of a good fuel - Calorific value - HCV and LCV - Dulong's formula - Bomb calorimeter – Numerical problems - Coal -- Proximate and Ultimate analysis and their Significance - Liquid fuels - Petroleum- Origin and Refining - Cracking - Synthetic petrol - Petrol knocking - Diesel knocking - Octane and Cetane ratings - Anti-knock agents - Power alcohol – Bio diesel, Gaseous fuels: - Natural gas, LPG and CNG, Combustion - Calculation of air for the combustion of a fuel, Flue gas analysis – Orsat's apparatus - Numerical problems on combustion Explosives:- Rocket fuels

UNIT III: ELECTROCHEMICAL CELLS AND CORROSION

Galvanic cells - Reversible and irreversible cells - Single electrode potential - Electro chemical series and uses of this series- Standard electrodes (Hydrogen ,Calomel and Glass electrode) - Concentration Cells - Batteries: Dry Cell - Ni-Cd cells - Ni-Metal hydride cells - Li cells - Zinc - air cells.

Fuel cells:- Introduction - cell representation, H₂-O₂ fuel cell: Design and working, advantages and limitations. Types of fuel cells: Alkaline fuel cell - methanol-oxygen - phosphoric acid fuel cells - molten carbonate fuel cells.

Corrosion :- Definition - Theories of Corrosion (chemical & electrochemical) - Formation of galvanic cells by different metals, by concentration cells, by differential aeration and waterline corrosion - Passivity of metals -Pitting corrosion - Corrosion under insulation -Galvanic series - Factors which influence the rate of corrosion –Protection from corrosion -Design and material selection - Cathodic protection - Protective coatings: - Surface preparation - Metallic (galvanizing and tinning) coatings - Methods of application on metals (Electroplating, Electroless plating),

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT IV: CHEMISTRY OF ADVANCED MATERIALS

Nano materials:- Introduction - Sol-gel method & chemical reduction method of preparation- Characterization by Brauner Emmett Teller(BET) method, Transmission Electron Microscope (TEM) and Scanning Electron Microscope (SEM) methods - Carbon nano tubes : Types, preparation(Laser ablation and Chemical vapour deposition method), properties and applications, Fullerenes.

Liquid crystals:- Introduction - Types - Applications

Super conductors:-Type -I, Type II - Characteristics and applications

Green synthesis :- Principles of Green Chemistry - Methods of synthesis (Aqueous Phase Method, Super Critical Fluid Extraction and Phase Transfer Catalysis) with examples - R₄M₄ principles

UNIT V: SOLID STATE CHEMISTRY

Types of solids - close packing of atoms and ions - BCC , CC, structures of rock salt cesium chloride-spinel - normal and inverse spinels, Non-elemental semiconducting Materials:- Stoichiometric, controlled valency & Chalcogen photo/semiconductors, Preparation of semiconductors - Semiconductor Devices:- p-n junction diode as rectifier - junction transistor. Insulators (electrical and electronic applications) Magnetic materials:- Ferro and ferri magnetism. Hall effect and its applications.

UNIT VI: NON CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES

Solar Energy: - Introduction, application of solar energy, conversion of solar energy (Thermal conversion & photo conversion) - photovoltaic cell: design, working and its importance Non-conventional energy sources

(i)Hydropower include setup a hydropower plant (schematic diagram)

(ii) Geothermal energy: Introduction-schematic diagram of a geothermal power plant

(iii) Tidal and wave power: Introduction- Design and working-movement of tides and their effect on sea level.

(iv) Ocean thermal energy: Introduction, closed-cycle, ocean thermal energy conversion (OTEC), open cycle OTEC, hybrid OTEC, schematic diagram and explanation.

(v) Biomass and biofuels

Text Books:

1. Engineering Chemistry by Jain and Jain; Dhanpat Rai Publishing Co.
2. Engineering Chemistry by Shikha Agarwal; Cambridge University Press, 2015 edition.

Reference Books:

- 1.Engineering Chemistry of Wiley India Pvt. Ltd., Vairam and others, 2014 edition (second).
- 2.Engineering Chemistry by Prasanth Rath, Cengage Learning, 2015 edition.
- 3.A text book of engineering Chemistry by S. S. Dara; S. Chand & Co Ltd., Latest Edition
- 4.Applied Chemistry by H.D. Gesser, Springer Publishers
- 5.Text book of Nano-science and nanotechnology by B.S. Murthy, P.Shankar and others, University Press, IIM

COMPUTER PROGRAMMING USING C

Course objectives:

Formulating algorithmic solutions to problems and implementing algorithms in C.

1. Notion of Operation of a CPU, Notion of an algorithm and computational procedure, editing and executing programs in Linux.
2. Understanding branching, iteration and data representation using arrays.
3. Modular programming and recursive solution formulation.
4. Understanding pointers and dynamic memory allocation.
5. Understanding miscellaneous aspects of C.
6. Comprehension of file operations.

Course Outcomes : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Understand the fundamentals of Computers, Procedural and Object-oriented languages, and development of algorithms	Understanding
CO2	Use different data types, learn programming styles, and assignment variations in a C program.	Applying
CO3	Choose the loops and decision making statements to solve the problem.	Applying
CO4	Demonstrate the use of functions to solve the given problem.	Understanding
CO5	Implement different operations on arrays and use string functions.	Applying
CO6	Understand pointers, structures and unions and also implement file operations in C programming for a given application.	Understanding

UNIT-I:

History and Hardware - Computer Hardware, Bits and Bytes, Components, Programming Languages - Machine Language, Assembly Language, Low- and High-Level Languages, Procedural and Object-Oriented Languages, Application and System Software, The Development of C Algorithms The Software Development Process.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-II:

Introduction to C Programming- Identifiers, The main () Function, The printf () Function
Programming Style - Indentation, Comments, Data Types, Arithmetic Operations, Expression Types, Variables and Declarations, Negation, Operator Precedence and Associativity, Declaration Statements, Initialization.

Assignment - Implicit Type Conversions, Explicit Type Conversions (Casts), Assignment Variations, Mathematical Library Functions, Interactive Input, Formatted Output, Format Modifiers.

UNIT -III:

Control Flow-Relational Expressions - Logical Operators:

Selection: if-else Statement, nested if, examples, Multi-way selection: switch, else-if, examples.

Repetition: Basic Loop Structures, Pretest and Posttest Loops, Counter-Controlled and Condition-Controlled Loops, while Statement, for Statement, Nested Loops, do-while Statement.

UNIT-IV

Modular Programming: Function and Parameter Declarations, Returning a Value, Functions with Empty Parameter Lists, Variable Scope, Variable Storage Class, Local Variable Storage Classes, Global Variable Storage Classes, Pass by Reference, Passing Addresses to a Function, Storing Addresses, Using Addresses, Declaring and Using Pointers, Passing Addresses to a Function.

Case Study: Swapping Values, Recursion - Mathematical Recursion, Recursion versus Iteration.

UNIT-V:

Arrays & Strings

Arrays: One-Dimensional Arrays, Input and Output of Array Values, Array Initialization, Arrays as Function Arguments, Two-Dimensional Arrays, Larger Dimensional Arrays- Matrices.

Strings: String Fundamentals, String Input and Output, String Processing, Library Functions

UNIT-VI:

Pointers, Structures, Files

Pointers: Concept of a Pointer, Initialization of pointer variables, pointers as function arguments, passing by address, Dangling memory, address arithmetic, character pointers and functions, pointers to pointers, Dynamic memory management functions, command line arguments.

Structures: Derived types, Structures declaration, Initialization of structures, accessing structures, nested structures, arrays of structures, structures and functions, pointers to structures, self-referential structures, unions, typedef, bit-fields.

Data Files: Declaring, Opening, and Closing File Streams, Reading from and Writing to Text Files, Random File Access

Text Books:

1. ANSI C Programming, Gary J. Bronson, Cengage Learning.
2. Programming in C, B. L. Juneja, Anita Seth, Cengage Delmar Learning India Pvt.
3. The C programming Language, Dennis Richie and Brian Kernighan, Pearson Education.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

ENVIRONMENTAL STUDIES

Course Objectives:

1. Basic understanding of the environment, global problems and ecosystems.
2. Overall understanding of the natural resources
3. Basic understanding of Biodiversity.
4. Course Learning Objectives: Acquaintance on various environmental challenges induced due to unplanned anthropogenic activities
5. Course Learning Objectives: Awareness on the social issues, environmental legislation and global treaties
6. Course Learning Objectives: An understanding of the environmental impact of developmental activities

Course Outcomes : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	It can create awareness on Global environmental problems including the eco system and its protection and the challenges.	Creating
CO2	To learn the importance of natural resources and their conservation for sustenance.	Remembering
CO3	To identify the threats to biodiversity and its conservation for different strategies.	Applying
CO4	Focus on the origins, pathways and consequences of anthropogenic activities in the environment as well as the approaches to control pollution and its remediation.	Remembering
CO5	To understand the important environmental problems and environmental legislation for sustainable development.	Understanding
CO6	Application of Environmental Management System (EMS) to an industry for sustenance.	Applying

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – I

Multidisciplinary nature of Environment and Ecology: Definition, Scope and Importance, Introduction to Brief works of noted Environmentalists & Naturalists (Wangari Mathai, Salim Ali and Sunderlal Bahuguna), Sustainability: Stockholm and Rio Summit–Global Environmental Challenges: Global warming and climate change, Carbon Credits, acid rains, ozone layer depletion, population growth and explosion, effects. Role of information Technology in Environment and human health.

Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem. - Producers, consumers and decomposers. - Energy flow in the ecosystem - Ecological succession. - Food chains, food webs and ecological pyramids. Classification of ecosystems- characteristic features, structure and function of Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems: Estuaries and Mangroves

-

UNIT – II

Natural Resources: Natural resources and associated problems

Forest resources – Use and over – exploitation, deforestation – Timber extraction – Mining, dams and other effects on forest and tribal people

Water resources – Use and over utilization of surface and ground water – Floods, drought, conflicts over water, dams – benefits and problems

Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, Sustainable mining of Granite, Laterite, Coal, Sea and River sands.

Food resources: World food problems, changes caused by non-agriculture activities-effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity

Energy resources: Growing energy needs, renewable and non-renewable energy sources use of alternate energy sources Vs Oil and Natural Gas Extraction.

Land resources: Land as a resource, land degradation, Wasteland reclamation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

UNIT – III

Biodiversity and its conservation: Definition: genetic, species and ecosystem diversity-classification - Value of biodiversity: consumptive use, productive use, social-Biodiversity at national and local levels. India as a mega-diversity nation - Hot-spots of biodiversity - Threats to biodiversity: habitat loss, man-wildlife conflicts - Endangered and endemic species of India – Conservation of biodiversity.

UNIT – IV

Environmental Pollution: Definition, Cause, effects and control measures of Air pollution, Water pollution, Heavy Metal pollution, Soil pollution, Noise pollution, Radioactive pollution: Sources and risks. Role of an individual in prevention of pollution. - Pollution case studies, Sustainable Life Style, Impact of Fire Crackers on Man and his well being.

Solid Waste Management: Sources, Classification, effects and control measures of urban and industrial solid wastes. Consumerism and waste products, Biomedical, Hazardous and e - waste management.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – V

Social Issues and the Environment: Urban problems related to energy -Water conservation- Coastal Regulatory zone management, rain water harvesting-Resettlement and rehabilitation of people; its problems and concerns. Environmental ethics: Issues and possible solutions. Environmental Protection Act -Air(Prevention and Control of Pollution) Act. Water (Prevention and control of Pollution) Act - Wildlife Protection Act -Forest Conservation Act-Issues involved in enforcement of environmental legislation. -Public awareness.

UNIT – VI

Environmental Management: Impact Assessment and its significance various stages of EIA, preparation of EMP and EIS, Environmental audit. Environmental Modeling: Definition (Box Model and Gaussian Plume Modeling), Ecotourism, Green Campus – Green business, Green politics and Green Building. The student should Visit an Industry / Ecosystem and submit a report individually on any issues related to Environmental Studies course and make a power point presentation.

TEXT BOOKS:

1. Environmental Studies, K. V. S. G. Murali Krishna, VGS Publishers, Vijayawada
2. Environmental Studies, R. Rajagopalan, 2nd Edition, 2011, Oxford University Press.
3. Environmental Studies, P.N. Palanisamy, P. Manikandan, A. Geetha, and K.Manjula Rani; Pearson Education, Chennai

REFERENCE:

1. Text Book of Environmental Studies, Deeshita Dave & P. Udaya Bhaskar, Cengage Learning.
2. A Textbook of Environmental Studies, Shaashi Chawla, TMH, New Delhi
3. Environmental Studies, Benny Joseph, Tata McGraw Hill Co, New Delhi
4. Perspectives in Environment Studies, Anubha Kaushik, C P Kaushik, New Age International Publishers, 2014
5. Environmental pollution, Monitoring and Control by Khopkar.S.M, New Age Publishers.
6. A Text Book of Fundamentals of Ecology, E.P.Odam, Philadelphia: W.B. Saunders Company.

1. Introduction to chemistry laboratory – Molarity, Normality, Primary, Secondary standard solutions, Volumetric titrations, Quantitative analysis, Quantitative analysis etc.,
2. Trial experiment – Estimation of HCl using standard Na₂CO₃ solutions
3. Estimation of KMnO₄ using standard Oxalic acid solution.
4. Estimation of Ferric iron using standard K₂Cr₂O₇ solution
5. Estimation of Copper using standard K₂Cr₂O₇ solution.
6. Estimation of Total Hardness water using standard EDTA solution.
7. Estimation of Copper using standard EDTA solution.
8. Estimation of Copper using Colorimeter
9. Estimation of pH of the given sample solution using pH meter.
10. Conductometric Titrations between strong acid and strong base
11. Conductometric Titrations between strong acid and Weak base
12. Potentiometric Titrations between strong acid and strong base
13. Potentiometric Titrations between strong acid and Weak base
14. Estimation of Zinc using standard potassium ferrocyanide solution
15. Estimation of Vitamin – C

C PROGRAMMING LAB

OBJECTIVES:

1. Understand the basic concept of C Programming, and its different modules that includes conditional and looping expressions, Arrays, Strings, Functions, Pointers, Structures a File programming.
2. Acquire knowledge about the basic concept of writing a program.
3. Role of constants, variables, identifiers, operators, type conversion and other building blocks of C Language.
4. Use of conditional expressions and looping statements to solve problems associated with conditions and repetitions.
5. Role of Functions involving the idea of modularity.

Course Outcomes : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Development of conditional and iterative statements	Applying
CO2	Design of programs with homogeneous sequences and code reusability features	Creating
CO3	Implement programs with heterogeneous sequences, static & dynamic memory management and file handling	Applying

Mapping of COs with POs and PSOs

Programming

Exercise - 1 Basics

- a) What is an OS Command, Familiarization of Editors - vi, Emacs
- b) Using commands like mkdir, ls, cp, mv, cat, pwd, and man
- c) Write a C Program to perform Adding, Subtraction, Multiplication and Division of two numbers from Command line

Exercise - 2 Basic Math

- a) Write a C Program to Simulate 3 Laws at Motion
- b) Write a C Program to convert Celsius to Fahrenheit and vice versa

Exercise - 3 Control Flow - I

- a) Write a C Program to Find Whether the Given Year is a Leap Year or not.
- b) Write a C Program to Add Digits & Multiplication of a number

Exercise – 4 Control Flow - II

- a) Write a C Program to Find Whether the Given Number is
 - i. Prime Number
 - ii. Armstrong Number
- b) Write a C program to print Floyd Triangle
- c) Write a C Program to print Pascal Triangle

Exercise – 5 Functions

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

- a) Write a C Program demonstrating of parameter passing in Functions and returning values.
- b) Write a C Program illustrating Fibonacci, Factorial with Recursion without Recursion

Exercise – 6 Control Flow - III

- a) Write a C Program to make a simple Calculator to Add, Subtract, Multiply or Divide Using switch...case
- b) Write a C Program to convert decimal to binary and hex (using switch call function the function)

Exercise – 7 Functions – Continued

Write a C Program to compute the values of $\sin x$ and $\cos x$ and e^x values using Series expansion. (use factorial function)

Exercise – 8 Arrays

Demonstration of arrays

- a) Search-Linear.
- b) Sorting-Bubble, Selection.
- c) Operations on Matrix.

Exercises - 9 Structures

- a) Write a C Program to Store Information of a Movie Using Structure
- b) Write a C Program to Store Information Using Structures with Dynamically Memory Allocation
- c) Write a C Program to Add Two Complex Numbers by Passing Structure to a Function

Exercise - 10 Arrays and Pointers

- a) Write a C Program to Access Elements of an Array Using Pointer
- b) Write a C Program to find the sum of numbers with arrays and pointers.

Exercise – 11 Dynamic Memory Allocations

- a) Write a C program to find sum of n elements entered by user. To perform this program, allocate memory dynamically using malloc () function.
- b) Write a C program to find sum of n elements entered by user. To perform this program, allocate memory dynamically using calloc () function.

Understand the difference between the above two programs.

Exercise – 12 Strings

- a) Implementation of string manipulation operations **with** library function.
 - i) copy
 - ii) concatenate
 - iii) length
 - iv) compare
- b) Implementation of string manipulation operations **without** library function.
 - i) copy
 - ii) concatenate
 - iii) length
 - iv) compare

Exercise -13 Files

- a) Write a C programming code to open a file and to print its contents on screen.
- b) Write a C program to copy files

Exercise - 14 Files Continue

- a) Write a C program merges two files and stores their contents in another file.
- b) Write a C program to delete a file.

Note:

- a) All the Programs must be executed in the Linux Environment. (Mandatory)
- b) The Lab record must be a print of the LATEX (.tex) Format.

Subject Code: 16BH2T02

ENGLISH-II

Introduction:

In view of the growing importance of English as a tool for global communication and the consequent emphasis on training the students have to acquire communicative competence, the syllabus has been designed to develop linguistic and communicative competence of the students of Engineering.

As far as the detailed Textbooks are concerned, the focus should be on the skills of listening, speaking, reading and writing. The non-detailed Textbooks are meant for extensive reading for pleasure and profit. Thus the stress in the syllabus is primarily on the development of communicative skills and fostering of ideas.

Course Objectives:

1. To improve the language proficiency of the students in English with emphasis on LSRW skills.
2. To enable the students to study and comprehend the prescribed lessons and subjects more effectively relating to their theoretical and practical components.
3. To develop the communication skills of the students in both formal and informal situations.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Emphasizes that the ultimate aim of education is to enhance wisdom and inspires the readers to serve their nation with their self enrichment.	Understanding
CO2	Enables the learners to promote peaceful co-existence and universal harmony in the society and empowers the learners to have initiation in innovation.	Understanding
CO3	Imparts the students to manage different cultural shock due to globalization and to develop multiculturalism to appreciate diverse cultures and also motivates the learners to contribute to their nation.	Analyzing
CO4	Projects the needs of society to examine its outdated traditions and motivates the readers to strengthen their nation with their contribution to science and technology.	Analyzing
CO5	Outlines the necessity to protect environment for the sustainability of the future generation and influences the readers to face challenges in the extensive services to the society.	Understanding
CO6	Inspires the learners at the advancement of software by the eminent personalities and motivates the readers to think and tap their innate talents.	Understanding

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

LISTENING SKILLS

Objectives:

1. To enable the students to appreciate the role of listening skill and improve their pronunciation.
2. To enable the students to comprehend the speech of people belonging to different backgrounds and regions.
3. To enable the students to listen for general content, to fill up information and for specific information.

SPEAKING SKILLS

Objectives:

1. To make the students aware of the importance of speaking for their personal and professional communication.
2. To enable the students to express themselves fluently and accurately in social and professional success.
3. To help the students describe objects, situations and people.
4. To make the students participate in group activities like role-plays, discussions and debates.
5. To make the students participate in Just a Minute talks.

READING SKILLS

Objectives:

1. To enable the students to comprehend a text through silent reading.
2. To enable the students to guess the meanings of words, messages and inferences of texts in given contexts.
3. To enable the students to skim and scan a text.
4. To enable the students to identify the topic sentence.
5. To enable the students to identify discourse features.
6. To enable the students to make intensive and extensive reading.

WRITING SKILLS

Objectives:

1. To make the students understand that writing is an exact formal skills.
2. To enable the students to write sentences and paragraphs.
3. To make the students identify and use appropriate vocabulary.
4. To enable the students to narrate and describe.
5. To enable the students capable of note-making.
6. To enable the students to write coherently and cohesively.
7. To make the students to write formal and informal letters.
8. To enable the students to describe graphs using expressions of comparison.
9. To enable the students to write technical reports.

Methodology:

1. The classes are to be learner-centred where the learners are to read the texts to get a comprehensive idea of those texts on their own with the help of the peer group and the teacher.
2. Integrated skill development methodology has to be adopted with focus on individual language skills as per the tasks/exercise.
3. The tasks/exercises at the end of each unit should be completed by the learners only and the teacher intervention is permitted as per the complexity of the task/exercise.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

4. The teacher is expected to use supplementary material wherever necessary and also generate activities/tasks as per the requirement.
5. The teacher is permitted to use lecture method when a completely new concept is introduced in the class.

The following text books are recommended for study in I B.Tech II Semester (Common for all branches) of Pragati Engineering College, Surampalem from the academic year 2016-17 (R-16 Regulations)

DETAILED TEXTBOOK:

- *ENGLISH ENCOUNTERS* Published by Maruthi Publishers.
- A BETTER INDIA, A BETTER WORLD by N.R. Narayana Murthy, Published by: Penguin Books India Pvt. Ltd.

DETAILED NON-DETAIL:

- *THE GREAT INDIAN SCIENTISTS*, Published by Cengage learning

The course content along with the study material is divided into six units.

UNIT 1:

1. 'The Greatest Resource- Education' from *English*

Encounters Objective:

Schumacher describes the education system by saying that it was mere training, something more than mere knowledge of facts.

Outcome:

The lesson underscores that the ultimate aim of Education is to enhance wisdom.

2. 'A P J Abdul Kalam' from *The Great Indian*

Scientists. Objective:

The lesson highlights Abdul Kalam's contributions to Indian science and the awards he received. Outcome:

Abdul Kalam's simple life and service to the nation inspires the readers to follow in his footsteps.

1. 'A Dilemma' from *English*

Encounters Objective:

The lesson centres on the pros and cons of the development of science and technology. Outcome:

The lesson enables the students to promote peaceful co-existence and universal harmony among people and society.

2. 'C V Raman' from *The Great Indian Scientists*.

Objective:

The lesson highlights the dedicated research work of C V Raman and his achievements in Physics.

Outcome:

The Achievements of C V Raman are inspiring and exemplary to the readers and all scientists.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT 3:

Unit 3 has two sections: Unit 3(A) and 3(B)

3 (A)

1. '*Cultural Shock*': *Adjustments to new Cultural Environments from English*

Encounters. Objective:

The lesson depicts of the symptoms of Cultural Shock and the aftermath consequences Outcome:

The lesson imparts the students to manage different cultural shocks due to globalization.

2. '*Homi Jehangir Bhabha*' from *The Great Indian Scientists*.

Objective:

The lesson highlights Homi Jehangir Bhabha's contributions to Indian nuclear program as architect.

Outcome:

The seminal contributions of Homi Jehangir Bhabha to Indian nuclear program provide an aspiration to the readers to serve the nation and strengthen it.

Unit 3 (B)

1. 'What can we learn from West?' from *A Better India, A Better*

World Objective:

To enable students to appreciate the differences in cultural perspectives.

Outcome:

This lesson motivates students to develop a multicultural outlook and appreciate the diverse cultures.

UNIT 4:

1. '*The Lottery*' from *English*

Encounters. Objective:

The lesson highlights insightful commentary on cultural traditions. Outcome:

The theme projects society's need to re examine its traditions when they are outdated.

2. '*Jagadish Chandra Bose*' from *The Great Indian Scientists*.

Objective:

The lesson gives an account of the unique discoveries and inventions of Jagadish Chandra Bose in Science.

Outcome:

The Scientific discoveries and inventions of Jagadish Chandra Bose provide inspiration to the readers to make their own contributions to science and technology, and strengthen the nation.

UNIT 5:

1. '*The Health Threats of Climate Change*' from *English*

Encounters. Objective:

The essay presents several health disorders that spring out due to environmental changes Outcome:

The lesson offers several inputs to protect environment for the sustainability of the future generations.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

2. '*Prafulla Chandra Ray*' from *The Great Indian Scientists*.

Objective:

The lesson given is an account of the experiments and discoveries in Pharmaceuticals of Prafulla Chandra Ray.

Outcome:

Prafulla Chandra Ray's scientific achievements and patriotic fervour provide inspiration to the reader.

UNIT 6:

1. '*The Chief Software Architect*' from *English Encounters*

Objective:

The lesson supports the developments of technology for the betterment of human life. Outcome:

Pupil gets inspired by eminent personalities who toiled for the present day advancement of software development.

2. '*Srinivasa Ramanujan*' from *The Great Indian Scientists*.

Objective:

The lesson highlights the extraordinary achievements of Srinivasa Ramanujan, a great mathematician and the most romantic figure in mathematics.

Outcome: The lesson provides inspiration to the readers to think and tap their innate talents

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

I year - II semester

Subject Code: 16BH2T04

MATHEMATICS – II
(Mathematical Methods)

Course Objectives:

1. The course is designed to equip the students with the necessary mathematical skills and techniques that are essential for an engineering course.
2. The skills derived from the course will help the student from a necessary base to develop analytic and design concepts.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Solve the algebraic and transcendental Equation by using numerical method.	Applying
CO2	Finding the required functional volume using interpolation formulae with equal and unequal intervals.	Understanding
CO3	Evaluate the given integral using numerical methods by different formulae	Applying
CO4	Express the given function into Fourier series in the given interval. Find range of sine and cosine series in the given interval.	Applying
CO5	Find the Fourier integral and transforms of a given function and Fourier sine and cosine transform of a given function.	Applying
CO6	Find the P.D.E. by elimination of arbitrary function and arbitrary constant. Solve the liner and non-liner PDEs.	Applying

CO6	3	3	2	-	-	-	-	-	-	-	-	2	-	-

UNIT I: Solution of Algebraic and Transcendental Equations

Introduction- Bisection method – Method of false position – Iteration method – Newton-Raphson method (Onevariable and simultaneous Equations).

UNITII: Interpolation

Introduction- Errors in polynomial interpolation – Finite differences- Forward differences- Backward differences –Central differences – Symbolic relations and separation of symbols - Differences of a polynomial-Newton's formulae for interpolation – Interpolation with unequal intervals - Lagrange's interpolation formula.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT III: Numerical Integration and solution of Ordinary Differential equations

Trapezoidal rule- Simpson's 1/3rd and 3/8th rule-Solution of ordinary differential equations by Taylor's series Picard's method of successive approximations-Euler's method - Runge-Kutta method (second and fourth order).

UNIT IV: Fourier Series

Introduction- Periodic functions – Fourier series of -periodic function - Dirichlet's conditions – Even and odd functions –Change of interval– Half-range sine and cosine series.

UNIT V: Fourier Transforms

Fourier integral theorem (without proof) – Fourier sine and cosine integrals - sine and cosine transforms – properties – inverse transforms – Finite Fourier transforms.

UNIT VI: Partial Differential Equations

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions –solutions of first order linear (Lagrange) equation and nonlinear (standard types) equations. Classification of second order partial differential equations.

Applications: Method of separation of Variables- Solution of One dimensional Wave, Heat and two dimensional Laplace equations.

MATHEMATICS – III

Course Objectives:

1. The course is designed to equip the students with the necessary mathematical skills and techniques that are essential for an engineering course.
2. The skills derived from the course will help the student from a necessary base to develop analytic and design concepts.
3. Understand the most basic numerical methods to solve simultaneous linear equations.

Course Outcomes : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Find the Laplace transform of functions and evaluation of integrals.	Understanding
CO2	Find the inverse Laplace transform of different functions and solve the differential equations using Laplace transform	Applying
CO3	Tracing the curve for the given equation evaluate the double and triple integrals by direct method change of order of integration and change of variables	Applying
CO4	Evaluate the given integrals by using Beta and Gamma functions.	Applying
CO5	Find the gradient of a scalar field, divergence and curl of vector field and vector identities	Understanding
CO6	Evaluate the line, surface and volume integrals. Solve the problems using vector integral theorems.	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	3	2	-	-	-	-	-	-	-	-	2	-	2

CO6	3	3	3	-	-	-	-	-	-	-	-	2	-	2

UNIT I: Laplace transforms

Laplace transforms of standard functions-Shifting theorems - Transforms of derivatives and integrals – Unit step function –Dirac's delta function.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT II: Inverse Laplace transforms

Inverse Laplace transforms – Shifting Theorems - Transforms of derivatives and integrals - Convolution theorem (without proof).

Applications: Solving ordinary differential equations (initial value problems) using Laplace transforms.

UNIT III: Multiple integrals

Curve tracing: Cartesian, Polar and Parametric forms.

Multiple integrals: Double and triple integrals – Change of variables – Change of order of integration.

Applications: Finding Areas and Volumes.

UNIT IV: Special functions

Beta and Gamma functions- Properties - Relation between Beta and Gamma functions -Evaluation of improper integrals.

Applications: Evaluation of integrals.

UNIT V: Vector Differentiation

Gradient- Divergence- Curl - Laplacian and second order operators -Vector identities. **Applications:** Equation of continuity, potential surfaces

UNIT VI: Vector Integration

Line integral – Work done – Potential function – Area- Surface and volume integrals Vector integral theorems: Greens, Stokes and Gauss Divergence theorems (without proof) and related problems.

Applications: Work done, Force.

APPLIED PHYSICS

Course Objectives: Physics curriculum which is re-oriented to the needs of Circuital branches of graduate engineering courses. That serves as a transit to understand the branch specific advanced topics. The courses are designed to:

1. Impart Knowledge of Physical Optics phenomena like Interference, Diffraction and Polarization involving required to design instruments with higher resolution.
2. Teach Concepts of coherent sources, its realization and utility optical instrumentation.
3. Study the concepts regarding the bulk response of materials to the EM fields and their analytically study in the back-drop of basic quantum mechanics.
4. Understand the physics of Semiconductors and their working mechanism for their utility in sensors.

Course Outcomes : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Apply the concepts of interference and its contribution to engineering applications.	Understanding
CO2	Examine the concepts of the diffraction pattern of light for analysis of the materials and their characteristics.	Analyzing
CO3	Understand concepts of polarization phenomenon, Lasers and their engineering applications	Understanding
CO4	Examine the propagation of EM waves of Light and utilize in the analysis of the materials and to analyze the applications of the Optical fibers in the field of communication.	Analyzing
CO5	Analyze the phenomenon of electrical & thermal conductivities to sub-microscopic particles and to propose practical applications.	Analyzing
CO6	Interpret and apply the engineering applications of electronics in engineering applications.	Applying

CO6	3	2	2	-	-	-	-	-	-	-	-	2	1	-

UNIT-I

INTERFERENCE: Introduction-Principle of Superposition – Coherent Sources – Interference in thin films (reflection geometry)- Interference in wedge shaped films – Newton's rings –working principle of Interferometer, applications

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-II

DIFFRACTION: Introduction -Fraunhofer diffraction at single slit - Cases of double slit, N-slits & Circular Aperture (Qualitative treatment only)-Grating equation - Resolving power of a grating, Telescope and Microscopes- applications.

UNIT-III

POLARIZATION: Introduction -Types of Polarization – Methods of production – double refraction- Nicol Prism -Quarter wave plate and Half Wave plate – Working principle of Polarimeter (Sacharimeter)- applications.

LASERS: Introduction- Characteristics– Stimulated emission – Einstein's Transition Probabilities- Pumping schemes - Ruby laser – Helium Neon laser-applications of lasers

UNIT-IV

ELECTROMAGNETIC FIELDS: Introduction-Scalar and Vector Fields – Electric Potential- Gradient, Divergence of fields – Gauss and Stokes theorems-Propagation of EM waves through dielectric medium- Applications.

FIBER OPTICS: Introduction, Principle of Optical Fiber – Total Internal Reflection, Working principle of an Optical fiber, Numerical Aperture and Acceptance Angle-classification of Optical fibres- Applications.

UNIT-V

QUANTUM MECHANICS: Introduction - Matter waves – Schrödinger Time Independent and Time Dependent wave equations – Particle in a box.

FREE ELECTRON THEORY: Introduction-Defects of Classical free electron theory –resistance of Conductor-Quantum Free electron theory - concept of Fermi Energy-Fermi Energy level of Conductors- Density of States.

UNIT-VI

BAND THEORY OF SOLIDS: Introduction -Bloch's theorem (qualitative) – Kronig – Penney model – energy bands in crystalline solids – classification of crystalline solids– effective mass of electron & concept of hole.

SEMICONDUCTOR PHYSICS: Introduction-Conduction – Density of carriers in Intrinsic and Extrinsic semiconductors- Conductivity and Carrier concentration – Drift & Diffusion – relevance of Einstein's equation- Hall effect and its applications.

COURSE OUTCOME: Construction and working details of instruments, ie., Interferometer, Diffractometer and Polarimeter are learnt. Study EM-fields and semiconductors under the concepts of Quantum mechanics paves way for their optimal utility.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

UNIT-I Introduction to Electrical Circuits

Passive components and their V-I relations. Sources (dependent and independent) -Kirchoff's laws, Network reduction techniques(series, parallel, series - parallel, star-to-delta and delta- to-star transformation). source transformation technique, nodal analysis and mesh analysis.

UNIT-II Network topology

Definitions of Graph and Tree, Basic cut set and ties et matrices for planar networks, Loop and nodal methods of analysis of networks with dependent and independent voltage and current sources, Duality and Dual networks.

UNIT-III Magnetic Circuit

Basic definition of MMF, flux and reluctance. Analogy between electrical and magnetic circuits. Faraday's laws of electromagnetic induction Concept of self and mutual inductance. Dot convention - coefficient of coupling and composite magnetic circuit. Analysis of series and parallel magnetic circuits.

UNIT-IV Single Phase A.C Systems

Periodic waveforms (determination of rms, average value and form factor). Concept of phase angle and phase difference – Waveforms and phasor diagrams for lagging, leading networks. Complex and polar forms of representations, steady state analysis of R, L and C circuits. Power Factor and its significance real, reactive power and apparent power, waveform of instantaneous power triangle and complex power.

UNIT-V Analysis of AC Networks and Components of Electrical Wiring

Extension of node and mesh analysis to AC networks, Numerical problems on sinusoidal steady state analysis, Series and parallel resonance, Selectivity, band width and Quasi factor, Introduction to locus diagram. Basic components in electrical wiring, Types of wiring, Connection diagrams of SPST, Staircase, Gowdon, ceiling fan and Tube light connection, Purpose of earthing

UNIT-VI Network theorems (DC & AC Excitations)

Superposition theorem, Thevenin's theorem, Norton's theorem, Maximum Power Transfer theorem, Reciprocity theorem, Millman's theorem and compensation theorem.

ENGINEERING DRAWING

Course Objectives: Engineering drawing being the principle method of communication for engineers, the objective is to introduce the students, the techniques of constructing the various types of polygons, curves and scales. The objective is also to visualize and represent the 3D objects in 2D planes with proper dimensioning, scaling etc.

1. To introduce the students to use drawing instruments and to draw polygons, Engineering Curves.
2. To introduce the students to use scales and orthographic projections, projections of points.
3. To make the students draw the projections of simple lines inclined to one or both the planes.
4. To make the students draw the projections of the plane inclined to both the planes.
5. To make the students draw the projections of the various types of solids in different positions inclined to one of the planes.
6. To represent the object in 3D view through isometric views.

Course Outcomes : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Construct polygons and curves	Applying
CO2	Construct scales and Identify the position of points and lines	Applying
CO3	Identify the position of lines inclined to both the planes	Applying
CO4	Analyze the location and position of plane figures	Analyzing
CO5	Analyze the location of solid bodies	Analyzing
CO6	Develop an isometric view and orthographic view	Creating

Mapping of COs with POs and PSOs

CO6	3	2	2	1	2	-	-	-	-	-	-	-	2	2

Unit I

Polygons: Constructing regular polygons by general methods, inscribing and describing polygons on circles.

Curves: Parabola, Ellipse and Hyperbola by general methods, cycloids, involutes, tangents & normals for the curves.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

Unit II

Scales: Plain scales, diagonal scales and vernier scales

Orthographic Projections: Horizontal plane, vertical plane, profile plane, importance of reference lines, projections of points in various quadrants. Projections of lines, lines parallel either to the reference planes (HP, VP or PP)

Unit III

Projections of lines inclined to both the planes, determination of true lengths, angle of inclination and traces- HT, VT.

Unit IV

Projections of planes: regular planes perpendicular/parallel to one plane and inclined to the other reference plane; inclined to both the reference planes.

Unit V

Projections of Solids – Prisms, Pyramids, Cones and Cylinders with the axis inclined to one of the planes.

Unit VI

Conversion of isometric views to orthographic views, Conversion of orthographic views to isometric views.

ENGLISH - COMMUNICATION SKILLS LAB- II

PRESCRIBED LAB MANUAL FOR SEMESTER II:

'INTERACT: English Lab Manual for Undergraduate Students' Published by Orient Blackswan Pvt Ltd.

OBJECTIVES: To enable the students to learn demonstratively the communication skills of listening, speaking, reading and writing.

OUTCOME: A study of the communicative items in the laboratory will help the students become successful in the competitive world.

The course content along with the study material is divided into six units.

Course Outcomes: By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Make use of argumentative and critical thinking skills by elaborating ideas relevantly and improve team working skills.	Analyzing
CO2	Select and adopt appropriate non-verbal communication and other presentation required skills to deliver effective presentation with clarity and impact. And to develop fluency in communication and present themselves in interviews confidently.	Evaluating
CO3	Analyze and compose the unique qualities of professional writing styles to meet the needs and demands in both academics and professions to demonstrate the harmony of language and avoiding mistakes.	Applying

IT WORKSHOP

Course Objectives:

1. Understand the basic components and peripherals of a computer.
2. To become familiar in configuring a system.
3. Learn the usage of productivity tools.
4. Acquire knowledge about the netiquette and cyber hygiene.
5. Get hands on experience in trouble shooting a system

Course Outcomes: By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Understand the fundamentals of Computers its architectures and system software executing on it.	Understanding
CO2	Gain knowledge about working of internet other relevant information exchange mechanisms as well as tools for data analysis and data interpretations.	Analyzing

1. **System Assembling, Disassembling and identification of Parts / Peripherals**
2. **Operating System Installation**-Install Operating Systems like Windows, Linux along with necessary Device Drivers.
3. **MS-Office / Open Office**
 - a. **Word** - Formatting, Page Borders, Reviewing, Equations, symbols.
 - b. **Spread Sheet** - organize data, usage of formula, graphs, charts.
 - c. **Power point** - features of power point, guidelines for preparing an effective presentation.
 - d. **Access**- creation of database, validate data.
4. **Network Configuration & Software Installation**-Configuring TCP/IP, proxy and firewall settings. Installing application software, system software & tools.
5. **Internet and World Wide Web**-Search Engines, Types of search engines, netiquette, cyber hygiene.
6. **Trouble Shooting**-Hardware trouble shooting, Software trouble shooting.
7. **MATLAB**- basic commands, subroutines, graph plotting.
8. **LATEX**-basic formatting, handling equations and images.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

- PC Hardware introduces the students to a personal computer and its basic peripherals, the process of assembling a personal computer, installation of system software like MS Windows, Linux and the required device drivers.
- Internet & World Wide Web introduces the different ways of hooking the PC on to the internet from home and workplace and effectively usage of the internet.
- Usage of web browsers, email, newsgroups and discussion forums, awareness of cyber hygiene, i.e., protecting the personal computer from getting infected with the viruses, worms and other cyber attacks will be introduced.
- Productivity tools will enable the students in crafting professional word documents, excel spread sheets and power point presentations using the Microsoft suite of office tools and LaTeX.
- Basic usage of MATLAB toolboxes will be introduced.

Text Books:

1. Computer Hardware, Installation, Interfacing, Troubleshooting and Maintenance, K.L.James, Eastern Economy Edition.

8. Introduction to Information Technology, ITL Education Solutions limited, Pearson Education.

L	T	P	C
3	1	0	3

Preamble:

To enrich the students to acquire knowledge about the three phase systems, transient analysis, two port networks, network synthesis, Fourier series & Transforms and evaluating circuit performance by using SPICE.

This course enables the students to

1. Understand the three phase balanced circuits to get more power than single phase circuits.
2. Understand the three phase unbalanced circuits to measure the power in different loading conditions.
3. Study the transient behavior of electrical networks having dynamic elements with comprehension based on energy redistribution.
4. Formulate two port networks, particularly in transmission lines and estimate the performance using other parameters.
5. Study the design of circuit for the given excitation – response function..
6. Understand the frequency domain behavior with periodic and aperiodic excitations by using Fourier series, Fourier transforms

Course Outcomes: By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Analyze the three phase balanced circuits to measure the power in power systems.	Analyzing
CO2	Analyze the behavior of three phase unbalanced circuits.	Analyzing
CO3	Analyze the transient response of electrical networks applied to power systems with different types of excitations.	Analyzing
CO4	Formulate the parameters of different types of two port networks and interpret the relation among network parameters.	Applying
CO5	Analyze the various electrical networks by using elementary synthesis procedure.	Analyzing
CO6	Employ different harmonics components from the response of an electrical network using Fourier series and Fourier transforms.	Applying

Mapping of COs with POs and PSOs

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-I : Steady State analysis of Balanced Three phase circuits

Phase sequence- star and delta connection - relation between line and phase voltages and currents in balanced systems - analysis of balanced three phase circuits - measurement of active and reactive power in balanced three phase systems. Analysis with PSPICE simulation.

UNIT-II : Steady State analysis of Unbalanced Three phase circuits

Analysis of three phase unbalanced circuits: Millman's method, Loop method – Star-Delta transformation technique, Two wattmeter method for measurement of three phase power. Analysis with PSPICE simulation.

UNIT-III : Transient Analysis in DC and AC circuits

Transient response of R-L, R-C, R-L-C circuits for DC and AC excitations, Solution using differential equations and Laplace transforms. Analysis with PSPICE simulation.

UNIT-IV : Two Port Networks

Two port network parameters – Z, Y, ABCD and hybrid parameters and their relations, Cascaded networks - poles and zeros of network functions. Network functions for the Two-Port bridged – T, Pie and Lattice networks. Analysis with PSPICE simulation.

UNIT-V : Network synthesis

Positive real function, Testing of driving point functions, even and odd functions - basic synthesis procedure - LC immittance functions - RC impedance functions and RL admittance function - RL impedance function and RC admittance function - Foster and Cauer methods. Analysis with PSPICE simulation.

UNIT-VI : Fourier analysis, Fourier Transforms

Fourier theorem- Trigonometric form and exponential form of Fourier series, Conditions of symmetry- line spectra and phase angle spectra, Analysis of electrical circuits to non sinusoidal periodic waveforms. Fourier integrals and Fourier transforms – properties of Fourier transforms physical significance of the Fourier Transform and its application to electrical circuits. Analysis with PSPICE simulation.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-I : Single-phase Transformers -I

Types and constructional details - principle of operation - emf equation - operation on no load and on load – lagging, leading and unity power factors loads - phasor diagrams of transformers – equivalent circuit – regulation – losses and efficiency – effect of variation of frequency and supply voltage on losses – All day efficiency.

UNIT-II : Single-phase Transformers-II

Tests on single phase transformers – open circuit and short circuit tests – Sumpner's test – separation of losses – parallel operation with equal voltage ratios – auto transformer - equivalent circuit – comparison with two winding transformers.

UNIT- III : Three - Phase Transformers

Polyphase connections - Y/Y, Y/ Δ , Δ /Y, Δ / Δ and open Δ - Third harmonics in phase voltages - three winding transformers: determination of Z_p , Z_s and Z_t - transients in switching - off load and on load tap changers - Scott connection.

UNIT-IV: DC Generators

Construction and principle of operation of DC machine –EMF equation for generator – Classification of DC generators based on excitation – Characteristics of DC generators.

UNIT-V: D.C. Motors

Torque and back-emf equations of dc motors– Armature reaction and commutation – characteristics of shunt, series and compound motors - losses and efficiency- applications of dc motors.

UNIT-VI : Starting, Speed Control and Testing of D.C. Machines

Necessity of starter – Starting by 3 point starter, Speed control by armature voltage and field control

testing of DC machines - brake test, Swinburne's method – retardation test - principle of regenerative or Hopkinson's method–Field's test- separation of losses.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – I : Electrostatics:

Orthogonal Coordinate Systems & Review of Vector Calculus: Rectangular, Cylindrical, Spherical coordinate systems. differential length, area and volume. Electrostatic Fields – Coulomb's Law – Electric Field Intensity (EFI) – EFI due to a line and a surface charge – Work done in moving a point charge in an electrostatic field – Electric Potential, Potential gradient – Gauss's law in terms of (integral form and point form) Maxwell's first law, $\text{div}(\mathbf{D}) = \rho_v$ Laplace's and Poisson's equations and Solution of Laplace's equation in one variable.

UNIT – II : Electrostatic Field in Materials:(Conductors – Dielectrics and Capacitance)

Electric dipole – Dipole moment – potential and EFI due to an electric dipole Torque on an Electric dipole in an electric field –Behaviour of conductors in an electric field – Conductors and Insulators Polarization – Boundary conditions between conduction to Dielectric and dielectric to dielectrics capacitance – capacitance of parallel plates, spherical and coaxial cables with composite dielectrics– Energy stored and energy density in a static electric field – Current density – conduction and Convection current densities–Ohm's law in point form – Equation of continuity-

UNIT – III : Magneto statics and Ampere's Law:

Static magnetic fields – Biot-Savart's law – Oersted's experiment –Magnetic field intensity (MFI) – MFI due to a straight current carrying filament – MFI due to circular, square and solenoid current – Carrying wire – Relation between magnetic flux, magnetic flux density and MFI –Maxwell's second Equation, $\text{div}(\mathbf{B})=0$ –Ampere's circuital law and its applications comparison of electrostatics and Magnetostatics, MFI due to an infinite sheet of current and a long filament carrying conductor – Point form of Ampere's circuital law –Field due to a circular loop, rectangular and square loops, Maxwell's third equation, $\text{Curl}(\mathbf{H})=\mathbf{J}$.

UNIT – IV : Force in Magnetic fields:

Magnetic force - Moving charges in a Magnetic field – Lorentz force equation – force on a current element in a magnetic field – Force on a straight and a long current carrying conductor in a magnetic field – Force between two straight long and parallel current carrying conductors – a differential current loop as a magnetic dipole – Torque on a current loop placed in a magnetic field.

UNIT – V : Self and Mutual inductance :

Scalar and vector magnetic potentials. Inductance and energy stored and density in a magnetic field. Self and Mutual inductance determination of self-inductance of a solenoid and toroid and mutual inductance between a straight long wire and a square loop wire in the same plane.

UNIT – VI : Time Varying Fields:

Time varying fields – Faraday's laws of electromagnetic induction – Its integral and point forms, - Displacement current – Maxwell's fourth equation, $\text{Curl}(\mathbf{E})=-\partial\mathbf{B}/\partial t$ – Statically and Dynamically induced EMFs – Simple problems, Modification of Maxwell's equations for time varying fields– Poynting Theorem and Poynting vector.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

UNIT-I Review of Semi Conductor Physics: Insulators, Semi conductors, and Metals classification using Energy Band Diagrams, Mobility and Conductivity, Electrons and holes in Intrinsic Semi conductors, Extrinsic Semi Conductor, (P and N Type semiconductor) Hall effect, Generation and Recombination of Charges, Diffusion, Continuity Equation, Injected Minority Carriers, Law of Junction, Introduction to fermi level in Intrinsic, Extrinsic semi conductors with necessary mathematics characteristic, Temperature dependence on V-I characteristics, Transition and Diffusion capacitances.

UNIT-II Junction Diode Characteristics

Operation and characteristics of p-n junction diode. Current components in p- n diode, diode equation. Temperature dependence on V-I characteristic, diffusion capacitance and diode resistance (static and dynamic), energy band diagram of p-n diode. Special Diodes: Avalanche and Zener break down, Zener characteristics, tunnel diode, characteristics with the help of energy band diagrams, Varactor diode, LED, Photo diode.

UNIT-III Rectifiers and Regulators

Half wave rectifier, ripple factor, full wave rectifier (with and without (transformer), harmonic components in a rectifier circuit, inductor filter, capacitor filter, L-section filter, Π - section filter, and comparison of various filter circuits in terms of ripple factors. Simple circuit of a regulator using Zener diode. Types of regulators-series and shunt voltage regulators, over load voltage protection. Compensation techniques.

UNIT-IV : Transistors

Junction transistor, transistor current components, transistor as an amplifier and switch. Characteristics of transistor (CE, CB and CC configurations). Transistor biasing and thermal stabilization (to fixed bias, collector to base bias, self bias). Compensation against variation in base emitter voltage and collector current. Thermal runaway. Hybrid model of transistor. Analysis of transistor amplifier using h-parameters- FET: JFET Characteristics, Low frequency model of FET, FET as an amplifier.

UNIT-V Power semiconductor devices

Principle of operation and characteristics of Thyristors, Silicon control rectifiers, power IGBT and power MOSFET their ratings. Comparison of power devices.

MOFET Characteristics–static and Transfer (enhancement and depletion mode). Characteristics of UJT.

UNIT-VI Amplifiers and oscillators:

Feedback Amplifiers -classification, feedback concept, transfer gain and general characteristics of negative feedback amplifiers, effect of feedback on input and output resistances. Methods of analysis of feedback amplifiers. Power Amplifiers – Classification, push-pull amplifiers, Introduction to harmonics (distortion factor).

Oscillators – Condition for oscillation, RC-phase shift oscillator. Wien bridge oscillator, Crystal oscillator. Frequency and amplitude stability of oscillators.

THERMAL AND HYDRO PRIMEMOVERS (16ME3T09)

Course Objectives:

The objectives of the course are to make the students understand the various types of prime movers which can be connected to generators for power production, to impart the knowledge of various types of pumps.

Course Outcomes: By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	classify IC engine systems and their working	Understanding
CO2	Relate the correlations on basics of thermodynamics, steam properties, vapour power cycles and steam turbines.	Understanding
CO3	Illustrate the gas turbines and evaluate their performance.	Understanding
CO4	Define different fluid properties and analyze hydro dynamic forces on different vanes.	Understanding
CO5	Categorize various turbines and evaluate the performance.	Understanding
CO6	Categorize various pumps and evaluate the performance.	Understanding

Mapping of COs with POs and PSOs														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	3	-	3	2	-	-	-	-	3	3	3	2	2
CO2	3	3	-	3	2	-	-	-	-	3	3	3	2	2
CO3	3	3	-	3	2	-	-	-	-	3	3	3	2	2
CO4	3	3	-	3	2	-	-	-	-	3	3	3	2	2
CO5	3	3	-	3	2	-	-	-	-	3	3	3	2	2
CO6	3	3	-	3	2	-	-	-	-	3	3	3	2	2

PART-A: THERMAL PRIMEMOVERS

UNIT – I

Learning Objective: To impart the knowledge on I.C. Engines which can be connected to generators for power production and obtain the skills of performing the necessary calculations with respect to the functioning of the I.C. Engines.

IC ENGINES: Classification, working principles valve and port timing diagrams - air standard –cycles
Engine systems: fuel injection, carburetion, ignition, cooling and lubrication – Engine performance evaluation.

UNIT – II

Learning Objective: The students learn the basics of thermodynamics and to train the student in the aspects of steam formation and its utilities through the standard steam data tables and charts. To make the student correlate between the air-standard cycles and the actual cycles that governs the steam turbines. To train the student to calculate the performance of steam turbines using velocity diagrams.

BASICS OF THERMODYNAMICS: Thermodynamic Systems and State, Process, and Cycle. Laws of thermodynamics(statements only)- First Law of Thermodynamics and Analysis of Various Thermodynamic Processes; study state energy balance equation.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM (Autonomous)

STEAM PROPERTIES: Properties of steam use of steam tables by using temperature to entropy and enthalpy- entropy diagrams.

VAPOR POWER CYCLES: Carnot Cycle-Rankine Cycle- Thermodynamic Variables Effecting Efficiency and Output Of Rankine Cycle Analysis Of Simple Rankine Cycle And Re-Heat Cycle.

STEAM TURBINES: Schematic Layout Of Steam Power Plant Classification Of Steam Turbines-Impulse Turbine And Reaction Turbine- Compounding In Turbines- Velocity Diagrams For Simple Impulse. Work Done & Efficiency.(Taken from JNTU.K R13)

UNIT – III

Learning Objective: To impart the knowledge of gas turbine fundamentals, the governing cycles and the methods to improve the efficiency of gas turbines.

GAS TURBINES: Simple gas turbine plant-ideal cycle, closed cycle -open cycle-Efficiency, Work ratio and optimum pressure ratio for simple gas turbine cycle. Actual cycle, analysis of simple cycles & cycles with inter cooling, reheating and Regeneration.

PART-B: HYDRO PRIMEMOVERS

UNIT – IV

Learning Objective: To teach the student about the fundamental of hydraulics and properties of fluids, fluid dynamic and equations. Also to impart the knowledge on impact of jets.

PROPERTIES OF FLUIDS: Density, Specific Weight, Specific Volume, Specific Gravity, Viscosity, Surface Tension and Capillarity. Simple problems

IMPACT OF JETS AND PUMPS: Impulse momentum equation, Impact of Jet on stationary vanes (flat and curved), And Impact of Jet on moving vanes (flat and curved).

UNIT – V

Learning Objective: To make the student learn about the constructional features, operational details of various types of hydraulic turbines and governing of turbines. Also learn site selection for hydraulic power plant.

HYDRAULIC TURBINES: Classification of turbines; Working principle, Efficiency calculation and Design principles for Pelton Wheel, Francis and for Kaplan turbines; Performance equations of turbine; Governing of turbines; site selection and layout of Hydro- electric power plant; Components of Hydro- electric power plant.

UNIT – VI

Learning Objective: To impart the knowledge of various types of pumps, their constructional features, working and performance.

HYDRAULIC PUMPS

Centrifugal pumps: Types of pumps, Main components, working principle, Multi stage pumps, Performance and characteristic curves.

Reciprocating pumps: Types of pumps, main components working principle, performance single acting double acting reciprocating pumps, Performance and characteristic curves.

MANAGERIAL ECONOMICS AND FINANCIAL ANALYSIS (16BH3T14)

Course Outcomes: By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Make use of the concepts of managerial economics and demand in managerial decision making and predicting demand for goods and services.	Applying
CO2	Assess the functional relation among production, cost of production, cost concepts and Break even analysis.	Evaluating
CO3	Classify market structures as perfect and imperfect markets for price and output decisions.	Analyzing
CO4	Appraise the forms of business organizations and trade cycles in economic growth.	Evaluating
CO5	Apply accounting principles in recording transactions for the purpose of preparing financial statements.	Applying
CO6	Adapt capital budgeting techniques to take capital budgeting decisions.	Evaluating

Mapping of COs with POs and PSOs

Unit – I

Introduction to Managerial Economics and demand Analysis:

Definition of Managerial Economics and Scope-Managerial Economics and its relation with other subjects-Basic Economic Tools used in Managerial Economics-Concepts of Demand-Types-Determinants-Law of Demand its Exception-Elasticity of Demand-Types and Measurement- Law of Supply -Demand forecasting and it's Methods.

Unit – II

Production and Cost Analysis:

Production function – Isoquants and Isocosts-Law of Variable proportions- Laws of Returns to Scale-Cobb-Douglas Production function-Economies of Scale-Cost Concepts- Fixed vs Variable Costs-Out of Pocket Costs vs Imputed Costs-Cost Volume Profit analysis- Determination of Break-Even Point (Simple Problems)

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

Unit – III

Introduction to Markets, Theories of the Firm & Pricing Policies:

Market Structures: Perfect Competition, Monopoly and Monopolistic and Oligopoly – Features – Price, Output Determination – Managerial Theories of firm: Marris and Williamson's models – Methods of Pricing: Limit Pricing, Market Skimming Pricing, Internet Pricing: Flat Rate Pricing, Usage sensitive, Transaction based pricing, Priority Pricing.

Unit – IV

Types of Business Organization and Business Cycles:

Features and Evaluation of Sole Trader – Partnership – Joint Stock Company – State/Public Enterprises and their forms – Business Cycles – Meaning and Features – Phases of Business Cycle.

Unit – V

Introduction to Accounting:

Introduction to Double Entry Systems-Journal-Ledger- Trail Balance - Preparation of Financial Statements - Analysis and Interpretation of Financial Statements-Ratio Analysis – liquidity ratios, profitability ratios, solvency ratios, turnover ratios – Preparation of the Funds flow Statement (Simple Problems)

Unit – VI

Capital and Capital Budgeting: Capital Budgeting: Meaning of Capital- Capitalization- Sources of Finance (with special reference to Shares and Debentures)- Meaning of Capital Budgeting-Need for Capital Budgeting – Techniques of Capital Budgeting- Traditional and Modern Methods.

NETWORKS LAB (16EE3L01)

Course Objectives:

To verify and demonstrate various theorems, locus diagrams, resonance and two port networks. To determine MMF, Reluctance, self and mutual inductance of a magnetic circuit, time constant of RL and RC circuits, measurement of 3- phase power.

Course Outcomes: By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Employ various theorems applied to electrical circuits	Applying
CO2	Determination of MMF, Reluctance, Self and Mutual inductances, two port parameters of a given electric circuits, time constant of RL and RC Circuits and series and parallel resonance for RLC Circuit.	Applying
CO3	Simulate AC & DC circuits	Applying

SECTION-A:

THERMAL ENGINEERING LAB

1. I.C. Engines valve / port timing diagrams.
2. Engines performance test on 4 -stroke Diesel engine.
3. I.C. Engines performance test on 2-stroke petrol engine.
4. Evaluation of engine friction by .conducting Morse test on 4-stroke multi cylinder petrol engine.
5. Determination of PHP by retardation and motoring test on IC engine
6. I.C. Engines heat balance on petrol / Diesel engines.
7. Economical speed test of an IC engine
8. Study of boilers

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

SECTION- B :

HYDRAULIC MACHINES LAB

1. Impact of jets on Vanes.
2. Performance Test on Pelton Wheel.
3. Performance Test on Francis Turbine.
4. Performance Test on Single Stage Centrifugal Pump.
5. Performance Test on Reciprocating Pump.
6. Calibration of Venturi meter.
7. Calibration of Orifice meter.
8. Determination of loss of head due to sudden contraction in a pipeline.

Note: To conduct a minimum of 12 experiments by conducting a minimum of six from each section.

ELECTRICAL MACHINES - II (16EE4T08)

Preamble:

This course essentially covers AC machines, which have wide range of applications in industry. The main aim of the course is to provide a detailed analysis of operation and performance of 3-phase induction motor, 1- phase machines and synchronous machines. In addition, it also covers voltage regulation and parallel operation of synchronous generators.

Course objectives:

This Course enables the students to

- Understand the principle of operation and determine the equivalent circuit parameters of 3-phase induction motor.
- Deal with the detailed analysis of 3-phase induction motors and quantify the performance of induction motor and induction generator in terms of torque and slip.
- Understand the construction, operation and types of single phase motors, Shaded pole motor, AC Series motors and their applications for house hold/ Industrial purposes
- Study various methods of finding the regulation of non-salient and salient pole alternators
- Understand the concept of parallel operation and factors effecting the load shared by alternators
- Impart knowledge on principle of operation and factors effecting the performance of synchronous motor.

COURSE OUTCOMES: By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Determine the factors affecting the performance of 3-phase Induction Motor from its equivalent circuit.	Applying
CO2	Analyze the performance of 3-phase Induction Motor under different operating conditions using circle diagram.	Analyzing
CO3	Analyze the suitable motor such as single-phase Induction Motor and ,shaded pole motor and AC series motor for industrial applications	Analyzing
CO4	Determine the regulation of non-salient pole and salient pole alternators using various methods.	Applying
CO5	Analyze the factors affecting the load sharing of alternators running in parallel such as prime mover input and excitation	Understanding
CO6	Draw the power circles and excitation circles of synchronous motor to determine optimum operating point.	Applying

UNIT-I: 3-phase Induction Motors

Constructional details – Types of rotors - production of rotating magnetic field - principle of operation-rotor emf and rotor frequency – rotor current and pf at standstill and during running conditions – rotor power input, rotor copper loss and mechanical power developed and their interrelationship – equivalent circuit – phasor diagram

UNIT-II: Characteristics, starting and testing methods of Induction Motors

Torque equation - expressions for maximum torque and starting torque - torque slip characteristic– Speed control methods - no load and blocked rotor tests - circle diagram for predetermination of performance– starting methods- DOL, Star-delta, Auto transformer– performance characteristics - double cage and deep bar rotors - crawling and cogging- induction generator operation.

UNIT-III: Single Phase Motors

Single phase induction motors – field theory- Starting methods, Applications. Constructional features, Problems of starting–Double revolving equivalent circuit. Shaded pole motor, AC Series motor,

UNIT –IV: Synchronous generators

Constructional features of Cylindrical type and salient pole type – Armature windings –Distributed and concentrated windings – Distribution– Pitch and winding factors –E.M.F equation– Improvements of waveform and armature reaction–Voltage regulation - synchronous impedance method, MMF method and Potier triangle method–Phasor diagrams– Two reaction analysis of salient pole machines and phasor diagram. Torque angle characteristics for cylindrical and salient pole alternators.

UNIT-V: Parallel operation of synchronous generators

Parallel operation of alternators, synchronization with grid – Synchronizing power – Load sharing – Control of real and reactive power– Numerical problems.

UNIT –VI: Synchronous motors

Synchronous Motor principle and theory of operation– Methods of starting -Phasor diagram – Starting torque–Variation of current and power factor with excitation –Synchronous condenser – Mathematical analysis for power developed–Hunting and its suppression — Applications.

Preamble :

This course introduces the elements of linear control systems and their analysis. Classical methods of design using frequency response are included. The state space approach for modeling and analysis is the added feature of this course.

Course Objectives:

This course enables the students to

- Learn the mathematical modeling of physical systems to determine overall transfer function.
- Study the behavior of a control system in time domain.
- Learn the stability of control system using various techniques.
- Study the behavior of a control system in frequency domain.
- Discuss basic aspects of design and compensation of linear control systems.
- Understand the state space models of various electrical systems.

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

UNIT-I : Mathematical Modeling of Control Systems

Open Loop and closed loop control systems and their differences, Classification of control systems, Feedback Characteristics, transfer function of linear system, Differential equations of electrical networks, Translational and Rotational mechanical systems, Transfer Function of DC Servo motor - AC Servo motor - Synchro-transmitter and Receiver. Block diagram algebra – Representation by Signal flow graph - Reduction using Mason's gain formula.

UNIT-II : Time Response Analysis

Standard test signals - Time response of first order systems –Time response of second order systems - Time domain specifications - Steady state errors, Static error constants. Effect of adding poles and zeros on time domain specifications. P, PI, PD and PID control actions.

UNIT-III : Stability and Root locus Technique

The concept of stability – Routh- Hurwitz stability criterion, limitations – Root locus concept, construction of root loci.

UNIT-IV : Frequency Response Analysis

Introduction, Frequency domain specifications, Bode diagrams- transfer function. Phase margin and Gain margin-Stability Analysis. Polar Plots, Nyquist Stability.

UNIT-V : Classical control design techniques

Lag, Lead, Lag-Lead compensators, Design of compensators – using Bode plots.

UNIT-VI : State Space Analysis Of Continuous Systems

Concepts of state, state variables and state model, state space representation of transfer function, Diagonalization- Solving the Time invariant state Equations- State Transition Matrix and its Properties – Concepts of Controllability and Observability.

TEXT BOOKS:

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

UNIT-I: Thermal Power Plants

Power Plant, Types of Energy Sources, Selection of site, General layout of a thermal power plant showing paths of coal, steam, water, air, ash and flue gasses, ash handling system, Brief description of components: Boilers, Super heaters, Economizers, electrostatic precipitators steam Turbines : Impulse and reaction turbines, Condensers, feed water circuit, Cooling towers and Chimney.

UNIT-II: Hydro, Gas and Nuclear Power Plants

Hydro Power Plant: Selection of site, Layout and working, Types of hydroelectric power plants, Advantages of hydro generation.

Gas power plant: Layout, Components of a gas turbine, Open and Combined cycle power stations.

Nuclear power plants: Working principle, Components: Moderators, Control rods, Reflectors and Coolants. Types of Nuclear reactors and brief description of PWR, BWR and FBR, Radiation:

Radiation hazards and Shielding, nuclear waste disposal.

UNIT-III: Substations

Air Insulated Substations (AIS) - Indoor & Outdoor substations, Layout - Substation equipments and their purpose.

Bus bar arrangements in the Sub-Stations: Single bus bar, sectionalized single bus bar, Double bus bar arrangements.

Gas Insulated Substations (GIS) – Advantages of GIS, Comparison with AIS.

UNIT-IV: Distribution Systems

Classification, Design features, radial and ring main distribution systems, voltage drop calculations: DC distributors for radial DC distribution systems fed at single and both ends (equal / unequal voltages), stepped distributor and AC distribution, comparison of DC and AC distribution.

UNIT-V: Underground Cables

Types of Cables, Construction, Types of insulating materials, Calculation of insulation resistance, stress in insulation and power factor of cable, Numerical Problems. Capacitance of single and 3-Core belted Cables, Numerical Problems. Grading of Cables-Capacitance grading and Inter-sheath grading, Numerical Problems.

UNIT-VI: Economic Aspects of Power Generation & Tariff

Economic Aspects - Load curve, load duration and integrated load duration curves, discussion on economic aspects: connected load, maximum demand, demand factor, load factor, diversity factor, power capacity factor and plant use factor, Base and peak load plants, Numerical problems.

Tariff Methods - Costs of Generation and their division into Fixed, Semi fixed and Running Costs, Desirable Characteristics of a Tariff Method, Tariff Methods: Simple rate, Flat Rate, Block-Rate, two-part, three-part, and power factor tariff methods, Numerical problems.

L	T	P	C
3	1	0	3

Preamble:

Course Objectives:

- Explain the operation of various combinational circuits and the application of various logical operations.
- Explain the minimization techniques involved by the application of K-map.
- Understand on the design of logic circuits involved in the operation of Boolean expressions.
- Understand the significance of PLD's in industrial applications.
- Understand the importance of sequential circuits.
- Gain knowledge about the significance of designing of sequential circuits

CO	Statement	Cognitive Level
CO1	Apply the fundamental concepts of combinational circuits and the application of various logical operations.	Applying
CO2	Employ minimization techniques involved by the application of K-map.	Applying
CO3	Analyze the logic circuits.	Analyzing
CO4	Analyze the significance of PLD's in industrial applications.	Analyzing
CO5	Determine the performance of sequential circuits.	Applying
CO6	Analyze the significance of designing the sequential circuits.	Analyzing

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – I: REVIEW OF NUMBER OF SYSTEMS & CODES:

- i) Representation of numbers of different radix, conversion from one radix to another radix, $r-1$'s complements and r 's complements of signed members, problem solving.
- ii) 4 bit codes, BCD, Excess-3, 2421, 84-2-1 9's complement code etc.,
- iii) Logic operations and error detection & correction codes; Basic logic operations -NOT, OR, AND, Universal building blocks, EX-OR, EX-NOR - Gates, Standard SOP and POS, Forms, Gray code, error detection, error correction codes (parity checking, even parity, odd parity, Hamming code) NAND-NAND and NOR-NOR realizations. Floating point representation, Fixed point representation.

UNIT – II :MINIMIZATION TECHNIQUES:

Boolean theorems, principle of complementation & duality, De-morgan theorems, minimization of logic functions using Boolean theorems, minimization of switching functions using K-Map up to 6 variables, tabular minimization, problem solving (code-converters using K-Map etc..).

UNIT – III : COMBINATIONAL LOGIC CIRCUITS DESIGN :

Design of Half adder, full adder, half subtractor, full subtractor, applications of full adders, 4-bit binary subtractor, adder-subtractor circuit, BCD adder circuit, Excess 3 adder circuit, look-a-head adder circuit, Design of decoder, demultiplexer, 7 segment decoder, higher order demultiplexing, encoder, multiplexer, higher order multiplexing, realization of Boolean functions using decoders and multiplexers, priority encoder, 4-bit digital comparator.

UNIT – IV : INTRODUCTION OF PLD's :

PROM, PAL, PLA-Basics structures, realization of Boolean function with PLDs, programming tables of PLDs, merits & demerits of PROM, PAL, PLA comparison, realization of Boolean functions using PROM, PAL, PLA, programming tables of PROM, PAL, PLA.

UNIT – V : SEQUENTIAL CIRCUITS I:

Classification of sequential circuits (synchronous and asynchronous) , Level mode and Pulse mode sequential circuits, basic flip-flops, truth tables and excitation tables (nand RS latch, nor RS latch, RS flip-flop, JK flip-flop, T flip-flop, D flip-flop with reset and clear terminals).

Conversion from one flip-flop to flip-flop. Design of ripple counters, design of synchronous counters, Johnson counter, ring counter. Design of registers - Buffer register, control buffer register, shift register, bi-directional shift register, universal shift register.

UNIT – VI :SEQUENTIAL CIRCUITS II :

Finite state machine; Capabilities and limitations of FSM. Analysis of clocked sequential circuits, state diagrams, state tables, reduction of state tables and state assignment, design procedures. Realization of circuits using various flip-flops. Meelay to Moore conversion and vice-versa.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-I

Linear Wave Shaping: Highpass, lowpass RC circuits-response to sinusoidal, step, pulse, square and ramp inputs. RC circuit as differentiator and integrator.

Attenuators: Basic attenuator circuit, compensated attenuator circuit.

Switching characteristics of devices: Diode as a switch, transistor as a switch transistor at cutoff, the reverse collector saturation current I_{CBO} , its variation with the junction temperature. The transistors with in saturation. Design of transistor switch.

UNIT-II : Nonlinear wave shaping: Diode clippers, Transistor clipper, clippers at two independent levels-transfer characteristics of clippers-emitter coupled clipper, clamping operation, diode clamping circuits with source resistance and diode resistance-transient and steady state response for a square wave input, clamping circuit theorem-practical clamping circuit. Comparators.

UNIT-III: Multivibrators: Bistable Multivibrators:

A basic binary circuit-explanation. Fixed-bias transistor binary, self-biased transistor binary, binary with commutating capacitors-analysis. Non-saturated binary-symmetrical triggering, schmitt trigger circuit-emitter coupled binary circuit.

Monostable multivibrator:

Basic circuit-collector coupled monostable multivibrator- emitter coupled monostable multivibrator-triggering of monostable multivibrator.

Astable multivibrator:

The Astable collector coupled multivibrator, the Astable emitter coupled multivibrator.

UNIT-IV: Digital logic circuits

Introduction, positive and negative logic, Diode OR gate, Diode AND gate, An inverter circuit with transistor, DTL, TTL, ECL, AOI logic, NMOS logic, PMOS logic, CMOS logic - analysis and problem solving.

UNIT-V: Time base generators:

Voltage time base generators- Introduction, definitions of sweep speed error, displacement error, transmission error, various methods of generating time-base waveforms, UJT time base generator, transistor constant current sweep.

Miller time base generators: General considerations, The miller sweep- general considerations of boot strap time base generator-basic principles, transistor boot strap time base generator

UNIT-VI : Synchronization and frequency division

Pulse synchronization of relaxation devices, frequency division of the sweep circuit-synchronization of Astable, Monostable multivibrator, synchronization of sweep circuit with symmetrical signals-sine wave frequency division with a sweep circuit.

Sampling Gates: Basic operating principle, Unidirectional diode gate circuits, bi-directional gates using transistors. A bidirectional diode gate, Four-diode gate. Applications of sampling gates.

MANAGEMENT SCIENCE (16BH4T15)

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Recognize management thoughts, motivational theories and types of organization.	Understanding
CO2	Apply the concepts of operations management, such as control charts, work study, materials management for smooth functioning of production units.	Application
CO3	Appraise the role of functional management in maximizing profits.	Understand
CO4	Apply techniques of project management in controlling cost.	Application
CO5	Apply principles of strategic management for managerial decisions.	Remembering
CO6	Classify the management practices with reference to current business scenario.	Understanding

Mapping of COs with POs and PSOs														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	-	-	-	-	-	2	-	-	2	1	1	-	-	-
CO2	-	2	-	-	-	-	-	-	-	-	-	-	-	-
CO3	-	1	-	-	-	1	-	1	3	-	-	-	-	-
CO4	-	2	-	-	-	-	-	-	-	-	3	-	-	-

CO6	-	-	-	-	1	-	-	-	-	1	1	2	-	-

Unit I

Introduction to Management: Concept –nature and importance of Management – Functions of Management – Evaluation of Management thought- Theories of Motivation – Decision making Process-Designing organization structure- Principles of organization - Types of organization structure.

Unit II

Operations Management: Production Management-functions– Work study- Statistical Quality Control- Control charts (P-chart, R-chart, and C-chart). Simple problems- Material Management: Need for Inventory control- EOQ, ABC analysis (simple problems) and Types of ABC analysis (HML, SDE, VED, and FSN analysis).

Unit III

Functional Management: Concept of HRM, HRD and PMIR- Functions of HR Manager- Job Evaluation and Merit Rating, Balanced Score Card–Team Dynamics/Working in Teams - Marketing Management- Functions of Marketing – Marketing strategies based on Product Life Cycle.

Unit IV

Project Management: (PERT/CPM): Development of Network – Difference between PERT and CPM Identifying Critical Path- Probability- Project Crashing (Simple Problems).

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

Unit V

Entrepreneurship Management & Strategic Management: Entrepreneurship-features- Financial Institutions facilitating entrepreneurship – Startup culture.

Strategic Management: Vision, Mission, Goals, Strategy – Elements of Corporate Planning Process – Environmental Scanning – SWOT analysis Steps in Strategy Formulation and Implementation, Generic Strategy Alternatives.

Unit VI

Introduction to Contemporary Management Practices: Basic concepts of MIS, JustInTime (JIT) system, Total Quality Management (TQM), Lean Six Sigma, People Capability Maturity Model, Supply Chain Management, Evolution of Enterprise Systems, Business Process Outsourcing (BPO), Business Process Re-Engineering.

ELECTRICAL MACHINES – I LAB (16EE4L04)

Course Objective:

Able to perform the experiments which are necessary to determine the parameters and the performance characteristics of DC machines and transformers.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Determine the performance characteristics of DC machine by conducting direct and indirect tests.	Applying
CO2	Determine the performance of a single phase transformer by conducting open circuit (O.C), short circuit (S.C) tests and Sumpner's test.	Applying
CO3	Understand 3-phase to 2-phase transformation using the Scott Connection.	Understanding

Mapping of COs with POs and PSOs

CO3	3	1	-	-	-	-	-	-	2	2	-	-	2	-

ANY TEN OF THE FOLLOWING EXPERIMENTS ARE TO BE CONDUCTED

1. Speed control of DC shunt motor by Field and armature Control.
2. Swinburne's test and Brake Test on DC Shunt Motor.
3. Magnetization characteristics of DC shunt generator.
4. Load Test on DC shunt Generator.
5. Hopkinson's test on DC shunt machines.
6. Fields test on DC series machines.
7. OC & SC test on single phase transformer.
8. Direct Load test on single phase transformer.
9. Sumpner's or Back to back test on identical single phase transformers.
10. Separation of core losses of a single phase transformer.
11. Parallel operation of single Phase Transformers.
12. Scott connection of single phase transformers.

ELECTRONIC DEVICES AND CIRCUITS LAB (16EE4L05)

Course Objective:

To plot the characteristics of semi conductor devices. To analyze the operation of rectifiers (Half and Full wave) with and without filters.

COURSE OUTCOMES: By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Plot the characteristics of semi conductor devices.	Analyzing
CO2	Analyze the operation of rectifiers (Half and Full wave) with and without filters.	Analyzing
CO3	Plot the characteristics of Two stage R-C coupled Amplifier.	Analyzing
CO4	Determine the frequency response of RC-Phase Shift Oscillator using IC 741.	Applying

Mapping of COs with POs and PSOs														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1	-	-	-	-	-	-	2	-	-	-	2	1

CO4	2	1	-	-	-	-	-	-	2	-	-	-	2	1

ANY TEN OF THE FOLLOWING EXPERIMENTS ARE TO BE CONDUCTED

- Study of various devices.
 - Function Generator.
 - Digital Voltmeter.
 - Regulated Power Supply.
 - CRO front Panel.
- P-N Junction Diode Characteristics
- Zener Diode Characteristics and load characteristics.
- Rectifiers (without filter) Part A: Half – wave Rectifier
Part B: Full-wave Rectifier
- Rectifiers (with filter) Part A: Half – wave Rectifier & Shunt Capacitance Filter
Part B: Full-wave Rectifier & Shunt Capacitance Filter
- BJT Characteristics(CE Configuration) Part A: Input Characteristics
Part B: Output Characteristics
- JFET Characteristics.
- UJT Characteristics
- CRO : Lissagous figures, Gearwheel pattern and phase shift (RC)

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

10. Frequency response of CE Amplifier with and without feedback.
11. CC Amplifier – Input and Output Impedance measurements.
12. Frequency response of FET CS Amplifier

III Year –I Semester

POWER SYSTEMS– II (16EE5T13)

Preamble:

This course is an extension of Power systems–I course. It deals with basic theory of transmission lines modeling and their performance analysis. Transient in power system, improvement of power factor and voltage control are discussed in detail. It is important for the student to understand the mechanical design aspects of transmission lines, cables, insulators.

Course Objectives:

This course enables the students to

- Compute inductance/capacitance of transmission lines and to understand the concepts of GMD/GMR.
- Study the short and medium length transmission lines, their models and performance.
- Study the performance and modeling of long transmission lines.
- Learn the effect of travelling waves on transmission lines.
- Observe the factors affecting the performance of transmission lines.
- Discuss sag and tension computation of transmission lines as well as to study the performance of overhead insulators.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Compute resistance, inductance and capacitance values of transmission lines.	Applying
CO2	Analyze the performance of short and medium transmission lines.	Analyzing
CO3	Estimate the performance of long transmission lines	Analyzing
CO4	Derive expressions for reflection and refraction coefficients with various terminations of lines	Analyzing
CO5	Study the performance of transmission lines under various conditions like Skin, Proximity, Ferranti effect, Corona, Over voltages, Radio Interference...etc	Applying
CO6	Illustrate sag and tension in transmission lines and the use of different types of line insulators for voltage distribution	Applying

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-I: Transmission Line Parameters:

Conductor materials - Types of conductors – Calculation of resistance for solid conductors – Calculation of inductance for single phase and three phase– Single and double circuit lines– Concept of GMR and GMD–Symmetrical and asymmetrical conductor configuration with and without transposition–Bundled conductors–Calculation of capacitance for 2 wire and 3 wire systems – Effect of ground on capacitance – Capacitance calculations for symmetrical and asymmetrical single and three phase–Single and double circuit lines- Bundled conductors.

UNIT-II: Performance of Short and Medium Length Transmission Lines : Classification of Transmission Lines – Short, medium, long line and their model representations –Nominal-T–Nominal-Pie and A, B, C, D Constants for symmetrical and Asymmetrical Networks–Mathematical Solutions to estimate regulation and efficiency of all types of lines.

UNIT-III : Performance of Long Transmission Lines:

Long Transmission Line–Rigorous Solution – Evaluation of A,B,C,D Constants– Interpretation of the Long Line Equations, regulation and efficiency– Incident, Reflected and Refracted Waves –Surge Impedance and SIL of Long Lines–Wave Length and Velocity of Propagation of Waves – Representation of Long Lines – Equivalent-T and Equivalent Pie network models.

UNIT – IV: Power System Transients:

Types of System Transients – Travelling or Propagation of Surges – Attenuation–Distortion– Reflection and Refraction Coefficients – Termination of lines with different types of conditions – Open Circuited Line–Short Circuited Line – T-Junction– Lumped Reactive Junctions.

UNIT-V: Various Factors governing the Performance of Transmission line:

Skin and Proximity effects – Description and effect on Resistance of Solid Conductors – Ferranti effect – Charging Current –Shunt Compensation –Corona – Description of the phenomenon–Factors affecting corona–Critical voltages and power loss – Radio Interference.

UNIT-VI: Sag and Tension Calculations and Overhead Line Insulators:

Sag and Tension calculations with equal and unequal heights of towers–Effect of Wind and Ice on weight of Conductor–Stringing chart and sag template and its applications–Types of Insulators – String efficiency and Methods for improvement– Voltage distribution–Calculation of string efficiency–Capacitance grading and Static Shielding.

Text Books:

5. <http://nptel.ac.in/courses/108102047/>

PRAGATI ENGINEERING COLLEGE : SURAMPALEM (Autonomous)

UNIT-I : Measuring Instruments

Classification – Deflecting, control and damping torques – Ammeters and Voltmeters – PMMC, moving iron type, dynamometer and electro static instruments – Expression for the deflecting torque and control torque – Errors and compensations– Extension of range using shunts and series resistance - Current Transformers and Potential transformers - Ratio error and phase angle error.

UNIT-II : Measurement of Power and Energy

Single phase and three phase dynamometer wattmeter– LPF and UPF –Expression for deflecting and control torques – Extension of range of wattmeter using instrument transformers – Measurement of active and reactive powers in balanced and unbalanced three phase systems – Type of P.F. Meters – Single phase and three phase dynamometer, moving iron type- Single phase induction type energy meter – Driving torque and braking torque – errors and compensation methods –Testing by phantom loading using R.S.S. meter– Three phase energy meter – Tri vector meter – Maximum demand meters–Electrical resonance type frequency meter.

UNIT-III : Potentiometers:

Principle and operation of D.C. Crompton's potentiometer – Standardization– Measurement of unknown resistance, Current, Voltage – AC Potentiometers: polar and coordinate types –Standardization – Calibration of various types of measuring instruments, Applications.

UNIT-IV : Bridge Measurements

Methods of measuring low, medium and high resistance – Sensitivity of Wheat stone's bridge – Carey Foster's bridge– Kelvin's double bridge for measuring low resistance– Loss of charge method for measurement of high resistance – Megger– Measurement of earth resistance – Measurement of inductance – Quality Factor – Maxwell's bridge–Hay's bridge –Anderson's bridge–Measurement of capacitance and loss angle –Desauty bridge–Schering Bridge–Wagner's earthing device–Wien's bridge.

UNIT-V: Magnetic Measurements

Ballistic galvanometer – Equation of motion – Flux meter – Constructional details–Determination of B–H Loop methods of reversals six point method –AC testing – Iron loss of bar samples– Core loss measurement using bridges and potentiometers.

UNIT-VI : Digital meters

Digital Voltmeter–Successive approximation –Ramp and integrating type–Digital frequency meter, Digital phase angle meter–Digital multimeter–Digital Tachometer.

L	T	P	C
3	1	0	3

Preamble:

Course Objectives:

- Study the characteristics of various power semiconductor devices and designing the firing circuits for SCR.
- Understand the operation of single phase half and fully controlled converters.
- Study the operation of three phase fully controlled converters and semi converters.
- Analyze the operation of high frequency DC–DC converters.
- Understand the working of inverters and application of PWM techniques for voltage control.
- Study the operation of AC – AC converters.

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – I: Power Semi Conductor Devices:

Thyristors– Silicon controlled rectifiers (SCR's) – Static characteristics of SCR–Turn on and turn off methods–Dynamic characteristics of SCR. Snubber circuit design–Basic requirements of gate triggering circuits for SCR. Characteristics of power MOSFET and power IGBT.

UNIT – II : Single Phase AC- DC Converters:

1-phase half controlled rectifiers – R load and RL load with and without freewheeling diode – 1-phase fully controlled rectifiers – center tapped configuration and bridge configuration- R load and RL load with and without freewheeling diode – continuous and discontinuous conduction – Effect of source inductance and infinitely large load inductance – Dual Converter for four quadrant operation.

UNIT – III : Three Phase AC–DC Converters:

Three-phase diode bridge rectifier, natural commutation of diodes, half controlled and Fully controlled rectifiers with R and RL load with/without freewheeling diodes - Effect of source inductance.

UNIT – IV:DC–DC Converters:

Buck converter, Boost converter, Buck-Boost converter - Continuous Conduction Mode (CCM) and Discontinuous Conduction Mode (DCM) – steady state analysis - Output voltage, converter gain in CCM & DCM operation - output voltage ripple and inductor current ripple (for CCM) – Principle of forward and flyback converters (in CCM).

UNIT – V: DC–AC Converters:

Single phase half bridge and full bridge inverters–Unipolar and bipolar switching–Three phase Square wave Inverters- 120° conduction mode, 180° conduction mode –Pulse Width Modulation techniques–Quasi-square wave – Sinusoidal pulse width modulation- shoot through fault in Voltage Source Inverter (VSI) – Current Source Inverter (CSI).

UNIT – VI: AC- AC Converters:

Static V-I characteristics of TRIAC and modes of operation – 1-phase AC-AC regulator, phase angle control, integrated cycle control with R and RL loads – Continuous and discontinuous conduction-Single phase Midpoint type and Bridge type cyclo converter with R and RL loads- 3-Phase AC-AC regulators (with R load).

Preamble:

Course Objectives:

- Introduce the concepts and techniques associated with the understanding of signals and systems.
- Introduce the concept of sampling and reconstruction of signals.
- Analyze the linear systems in time and frequency domains.
- Understand the concepts of convolution and correlation of signals.
- Study Laplace transform as mathematical tool to analyze signals and systems.
- Study z-transform as mathematical tool to analyze discrete-time signals and systems.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

UNIT- I: INTRODUCTION:

Definition of Signals and Systems, Classification of Signals, Classification of Systems, Operations on signals: time-shifting, time-scaling, amplitude-shifting, amplitude-scaling. Problems on Signals and Systems. Basic Signals (impulse function, step function, signum function, ramp function, Complex exponential and sinusoidal signals). Representation of periodic signals in frequency domain using Fourier series.

UNIT –II: SAMPLING THEOREM:

Fourier transform of arbitrary signal, Fourier transform of standard signals, Fourier transform of periodic signals, properties of Fourier transforms, Fourier transforms involving impulse function and Signum function. Graphical and analytical proof for Band Limited Signals, impulse sampling, Reconstruction of signal from its samples, effect of under sampling – Aliasing, Introduction to Band Pass sampling.

UNIT-III: ANALYSIS OF LINEAR SYSTEMS:

Linear system, impulse response, Response of a linear system, Linear time invariant (LTI) system, Linear time variant (LTV) system, Transfer function of a LTI system. Filter characteristics of linear systems. Distortion less transmission through a system, Signal bandwidth, system bandwidth, Ideal LPF, HPF and BPF characteristics, Causality and Poly-Wiener criterion for physical realization, relationship between bandwidth and rise time.

UNIT –IV: CONVOLUTION AND CORRELATION OF SIGNALS:

Concept of convolution in time domain and frequency domain using integral equations. Cross-correlation and auto-correlation of functions, properties of correlation function, Energy density spectrum, Parseval's theorem, Power density spectrum, Relation between auto correlation function and energy/power spectral density function. Relation between convolution and correlation, Detection of periodic signals in the presence of noise by correlation, Extraction of signal from noise by filtering.

UNIT –V: LAPLACE TRANSFORMS:

Review of Laplace transforms, Partial fraction expansion, Inverse Laplace transform, Concept of region of convergence (ROC) for Laplace transforms, constraints on ROC for various classes of signals, Properties of L.T's, Relation between L.T's, and F.T. of a signal. Laplace transform of certain signals using waveform synthesis.

UNIT –VI: Z-TRANSFORMS:

Fundamental difference between continuous-time and discrete-time signals, discrete time signal representation using complex exponential and sinusoidal components, Periodicity of discrete time using complex exponential signal, Concept of Z- Transform of a discrete sequence. Distinction between Laplace, Fourier and Z transforms. Region of convergence in Z-Transform, constraints on ROC for various classes of signals, Inverse Z-transform, properties of Z-transforms.

DATA STRUCTURES (16CS5T12)

Learning Objectives

1. Choose the appropriate data structure and algorithm design method for a specified application.
2. Solve problems using data structures such as linear lists, stacks, queues, binary trees, heaps binary search trees, and graphs and writing programs for these solutions.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Analyze recursive algorithms.	Analyze
CO2	Design linear data structures with stacks and queues.	Create
CO3	Illustrate the operations of linked lists.	Analyze
CO4	Construct nonlinear data structures(Trees) for its applications.	Apply
CO5	Make use of graph data structure to solve real world problems.	Apply
CO6	Justify the best searching and sorting techniques for a given data set.	Evaluate

Mapping of COs with POs and PSOs														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	1	1	-	-	-	-	-	-	-	-	-	-	-
CO2	3	1	2	-	-	-	-	-	-	-	-	-	-	-
CO3	3	1	2	1	-	-	-	-	-	-	-	-	1	-

CO5	3	1	2	1	-	-	-	-	-	-	-	-	1	-
CO6	3	1	2	-	-	-	-	-	-	-	-	-	1	-

UNIT - I

Data structure- Definition, types of data structures.

Recursion: Definition, Design Methodology and Implementation of recursive algorithms, Linear and binary recursion, recursive algorithms for factorial function, GCD computation, Fibonacci sequence.

UNIT - II

Stacks and Queues: Basic Stack Operations, Representation of a Stack using Arrays, Stack Applications: Infix to postfix Transformation, Evaluating Arithmetic Expressions.

Queues: Basic Queues Operations, Representation of a Queue using array, Implementation of Queue Operations using Stack, Circular Queues.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT - III

Linked Lists: Introduction, singly linked list, representation of a linked list in memory, Operations on a singly linked list, Reversing a singly linked list, Advantages and disadvantages of singly linked list, Circular linked list, Doubly linked list.

UNIT - IV

Trees: Basic tree concepts, Binary Trees: Properties, Representation of Binary Trees using arrays and linked lists, operations on a Binary tree, Binary Tree Traversals (recursive), Creation of binary tree from in, pre and post order traversals.

UNIT - V

Graphs: Basic concepts, Representations of Graphs: using Linked list and adjacency matrix, Graph algorithms, Graph Traversals (BFS & DFS), applications: Dijkstra's shortest path, Minimum Spanning Tree using Prim's Algorithm.(Algorithmic Concepts Only, No Programs required).

UNIT-VI

List Searches using Linear Search, Binary Search, Fibonacci Search

Sorting Techniques: Basic concepts, Sorting by: insertion (Insertion sort), selection (heap sort), exchange (bubble sort, quick sort), merging (merge sort) Algorithms.

ELECTRICAL MACHINES –II LAB (16EE5L06)

Course objectives:

This course enables the students to

- Understand the performance of various types of AC machines -induction motors, alternators and synchronous motors.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Assess the performance of single phase and three phase induction motors.	Analyzing
CO2	Analyze the performance of synchronous motors through X_d - X_q , V-inverted V curves.	Analyzing
CO3	Determine the regulation of 3-phase alternator by various methods.	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO2	2	3	-	-	-	-	-	-	2	-	-	-	1	2
CO3	2	2	-	-	-	-	-	-	2	-	-	-	1	2

ANY TEN OF THE FOLLOWING EXPERIMENTS ARE TO BE CONDUCTED

1. Brake test on three phase Induction Motor
2. No-load & Blocked rotor tests on three phase Induction motor
3. Regulation of a three –phase alternator by synchronous impedance & m.m.f. Methods
4. Regulation of three–phase alternator by Potier triangle method
5. V and Inverted V curves of a three—phase synchronous motor.
6. Determination of X_d and X_q of a salient pole synchronous machine
7. Equivalent circuit of single phase induction motor
8. Speed control of induction motor by V/f method.
9. Determination of efficiency of three phase alternator by loading with three phase induction motor.
10. Power factor improvement of single phase induction motor by using capacitors
11. Load test on single phase induction motor.
12. Study of three phase Slip ring Induction motor.

CONTROL SYSTEMS LAB (16EE5L07)

Course objectives:

This course enables the students to

- Understand time response of second order system and effect of different controllers on it.
- Understand the characteristics of AC servo motor, DC servo motor and synchros.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Compare theoretically calculated time domain specifications with experimental values of second order system and effect of P,PI, PID controllers on it.	Analyze
CO2	Make use of DC motor in calculating its transfer function and PLC to control stepper motor.	Create
CO3	Study the characteristics of AC servo motor, DC servo motor magnetic amplifiers, synchros, lead and lag compensators.	Analyze

Mapping of COs with POs and PSOs														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1	-	-	-	-	-	-	2	-	-	-	2	1
CO2	2	1	-	-	-	-	-	-	2	-	-	-	2	1
CO3	2	1	-	-	-	-	-	-	2	-	-	-	2	1

ANY TEN EXPERIMENTS ARE TO BE CONDUCTED

1. Time response of Second order system
2. Characteristics of Synchros
3. Programmable logic controller – characteristics of stepper motor
4. Effect of feedback on DC servo motor
5. Effect of P, PD, PI, PID Controller on a second order systems
6. Lag and lead compensation – Magnitude and phase plot
7. DC position control system
8. Transfer function of DC motor
9. Temperature controller using PID
10. Characteristics of AC servo motor
11. Characteristics of DC servo motor
12. Characteristics of magnetic amplifiers

DATA STRUCTURES LAB (16CS5L06)

Learning objectives:

This course is aimed to provide hands on experience to implement basic linear and nonlinear data structures- stack, queue, linked lists and searching & sorting techniques.

Course outcomes:

At the end of the Course, the student should be able to:

CO#	Statement	Cognitive Level
CO1	Implement linear and nonlinear data structures using C language.	Analyzing
CO2	Develop C programs for searching and sorting techniques.	Analyzing

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2	1	-	-	-	-	-	-	-	-	-	-	1
CO2	3	2	2	2	-	-	-	-	-	-	-	-	-	1

List of Experiments

1. a) Write a Program to Implement Stack Operations by using Array.
b) Write a Program to implement the operations of Queue using array.
2. Write a Program to Implement Singly Linked List and its operations.
3. a) Write a Program to Implement Stack Operations by using Linked List.
b) Write a Program to implement the operations of Queue using linked list.
4. Write a Program to Implement Circular Queue Operations by using Array.
5. Write a Program to Perform the Tree Traversal Techniques by using recursion.
6. Write a program for implementing the Depth First Search graph traversal algorithm.
7. Write a program for implementing the Breadth First Search graph traversal algorithm.
8. a) Write a Program to implement linear search algorithm.
b) Write a Program to implement binary search algorithm.
9. Write a Program to Sort the set of elements by using
 - i) Quick Sort.
 - ii) Merge Sort.

Note: Use Classes and Objects to implement the above programs.

INTELLECTUAL PROPERTY RIGHTS AND PATENTS (16BH5T16)

Unit I

Introduction to Intellectual Property Law – Evolutionary past – Intellectual Property Law Basics - Types of Intellectual Property - Innovations and Inventions of Trade related Intellectual Property Rights – Agencies Responsible for Intellectual Property Registration –WTO-WIPO- Regulatory – Over use or Misuse of Intellectual Property Rights - Compliance and Liability Issues.

Unit II

Introduction to Copyrights – Principles of Copyright – Subject Matters of Copyright – Rights Afforded by Copyright Law –Copyright Ownership – Transfer and Duration – Right to Prepare Derivative Works – Rights of Distribution – Rights of performers – Copyright Formalities and Registration – Limitations – Infringement of Copyright – International Copyright Law- Semiconductor Chip Protection Act.

Unit III

Introduction to Patent Law – Rights and Limitations – Rights under Patent Law – Patent Requirements – Product Patent and Process Patent- Ownership and Transfer – Patent Application Process and Granting of Patent – Patent Infringement and Litigation – International Patent Law – Double Patenting – Patent Searching – New developments in Patent Law

Unit IV

Introduction to Trade Mark – Trade Mark Registration Process – Post registration procedures – Trade Mark maintenance – Transfer of rights – Inter parties Proceedings – Infringement – Dilution of Ownership of Trade Mark – Likelihood of confusion – Trade Mark claims – Trade Marks Litigation – International Trade Mark Law.

Unit V

Introduction to Trade Secrets – Maintaining Trade Secret – Physical Security – Employee Access Limitation – Employee Confidentiality Agreement – Trade Secret Law – Unfair Competition – Trade Secret Litigation- Service Level Agreements – Breach of Contract – Applying State Law.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

Unit VI

Introduction to Cyber Law – Information Technology Act - Cyber Crime and E-commerce –Security-Data Security – Confidentiality –Data Privacy in India Vs Rest of the World.

Relevant Cases Shall be dealt where ever necessary.

Preamble:

Course Objectives:

- Learn the fundamentals of electric drive and different electric braking methods.
- Analyze the operation of three phase converter controlled dc motors and four quadrant operation of dc motors using dual converters.
- Discuss the converter control of dc motors in various quadrants.
- Understand the concept of speed control of induction motor by using AC voltage controllers and voltage source inverters.
- Learn the principles of static rotor resistance control and various slip power recovery schemes.
- Understand the speed control mechanism of synchronous motors

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Express the torque of drive to process requirement and different electric braking methods	Analyzing
CO2	Execute the four quadrant operation of three phase converter and dual converters	Analyzing
CO3	Analyze the Drives continuous operation at various quadrants in converter control.	Analyzing
CO4	Implementation of AC voltage controllers and voltage source inverters in the induction Motor drives for speed control mechanism.	Analyzing
CO5	Analyze the stator side control and rotor side control of three phase induction motor	Analyzing
CO6	Analyze the Control mechanism of speed requirement in industrial domain machines like synchronous motors.	Analyzing

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-I: Fundamentals of Electric Drives

Electric drive – Fundamental torque equation – Load torque components – Nature and classification of load torques – Steady state stability – Load equalization – Four quadrant operation of drive (hoist control) – Braking methods: Dynamic – Plugging – Regenerative methods.

UNIT-II: Controlled Converter Fed DC Motor Drives

Single phase Separately excited and self excited dc motor drives controlled by half and full converters – Output voltage and current waveforms – Speed-torque expressions – Speed-torque characteristics – Principle of operation of dual converters and dual converter fed DC motor drives.

UNIT-III : DC-DC Converters Fed DC Motor Drives

Single quadrant – Two quadrant and four quadrant DC-DC converter fed separately excited and self-excited DC motors – Continuous current operation – Output voltage and current waveforms – Speed-torque expressions – Speed-torque characteristics – Four quadrant operation – Closed loop operation (Block Diagram Only).

UNIT-IV: Stator side control of 3-phase Induction motor Drive

Control of Induction Motor by AC Voltage Controllers – Waveforms – Speed torque characteristics – Variable Voltage Variable Frequency control of induction motor by voltage source inverter – PWM control – Closed loop v/f control of induction motor drives (Block Diagram Only).

UNIT-V : Rotor side control of 3-phase Induction motor Drive

Static rotor resistance control – Slip power recovery schemes – Static Scherbius drive – Static Kramer drive – Performance and speed torque characteristics – Advantages – Applications.

UNIT-VI : Control of Synchronous Motors

Separate control & self control of synchronous motors – Operation of self controlled synchronous motors by VSI – Closed Loop control operation of synchronous motor drives (Block Diagram Only) – Variable frequency control – Pulse width modulation.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT –I: Per Unit Representation & Topology:

Per Unit Quantities–Single line diagram– Impedance diagram of a power system–Graph theory definition – Formation of element node incidence and bus incidence matrices – Primitive network representation – Formation of Y–bus matrix by singular transformation and direct inspection methods.

UNIT –II : Power Flow Studies

Necessity of power flow studies – Derivation of static power flow equations – Power flow solution using Gauss-Seidel Method – Newton Raphson Method (Rectangular and polar coordinates form –Decoupled and Fast Decoupled methods – Algorithmic approach – Problems on 3–bus system only.

UNIT –III : Z–Bus formulation

Formation of Z–Bus: Partial network– Algorithm for the Modification of Zbus Matrix for addition element for the following cases: Addition of element from a new bus to reference– Addition of element from a new bus to an old bus– Addition of element between an old bus to reference and Addition of element between two old buses - Modification of Z–Bus for the changes in network.

UNIT – IV: Symmetrical Fault Analysis

Transients on a Transmission line–Short circuit of synchronous machine(on no-load)– 3- Phase short circuit currents and reactances of synchronous machine–Short circuit MVA calculations -Series reactors – selection of reactors.

UNIT –V: Symmetrical Components & Fault analysis

Definition of symmetrical components - symmetrical components of unbalanced three phase systems – Power in symmetrical components – Sequence impedances – Synchronous generator – Transmission line and transformers – Sequence networks –Various types of faults LG– LL– LLG and LLL on unloaded alternator–unsymmetrical faults on power system.

UNIT – VI : Power System Stability Analysis

Elementary concepts of Steady state– Dynamic and Transient Stabilities– Description of Steady State Stability Power Limit–Transfer Reactance–Synchronizing Power Coefficient – Power Angle Curve and Determination of Steady State Stability –Derivation of Swing Equation–Determination of Transient Stability by Equal Area Criterion–Applications of Equal Area Criterion–Methods to improve steady state and transient stability.

Text Books:

L	T	P	C
3	1	0	3

Preamble: The analog circuits are developed on circuit Concept basis. The advancement of Technology in Fabrication Field gain prominence by using I.C Technology. On a Single chip millions of transistors are fabricated using Very Large Scale IC. In This context Operational Amplifies which is an analog device plays an important role for Analog IC Design. Operational Amplifies performs Mathematical operations. Therefore these Operational Amplifiers design goes into System design instead of circuit design. So Linear IC applications plays vital role in the electronic field.

This course enables the students to

- Study the types of I.C's, basic operation & performance parameters of differential amplifiers.
- Study the measuring techniques and the performance parameters of OP-AMP.
- Study the linear and non-linear applications of operational amplifiers.
- Study the analysis & design of different types of active filters using op amps.
- Study the internal structure, operation and applications of different analog ICs.
- Study the various converter circuits and their specifications.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Acquire the knowledge on operational amplifiers in the design of mathematical circuits for various applications.	Analyzing
CO2	Employ the Op-amp circuits for active filters.	Applying
CO3	Analyze the linear and non-linear characteristics of Op- amps and their applications.	Analyzing
CO4	Analyze the Filter circuits for I.C's.	Analyzing
CO5	Identify the gain bandwidth and frequency response of the amplifier configurations.	Applying
CO6	Discuss the working of operational amplifiers with linear integrated circuits.	Applying

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – I: INTEGRATED CIRCUITS:

Types, Classification of I.C's, Differential Amplifier- DC and AC analysis of Dual input Balanced output Configuration, Properties of other differential amplifier configuration - Dual Input Unbalanced Output, Single Ended Input – Balanced/ Unbalanced Output, DC Coupling and Cascade Differential Amplifier Stages, Level translator.

UNIT – II: OP-Amps:

Characteristics of OP-Amps, Integrated circuits-Types, Classification, Package Types and Temperature ranges, Power supplies, Op-amp Block Diagram, ideal and practical Op-amp Specifications, DC and AC characteristics, 741 op-amp & its features, Op-Amp parameters & Measurement, Input & Out put Off set voltages & currents, slew rate, CMRR, PSRR, drift, Frequency Compensation techniques.

UNIT – III: LINEAR and NON-LINEAR APPLICATIONS OF OP-AMPS:

Inverting and Non inverting amplifier, Integrator and differentiator, Difference amplifier, Instrumentation amplifier, AC amplifier, V to I, I to V converters, Buffers. Non- Linear function generation, Comparators, Multivibrators, Triangular and Square wave generators, Log and Anti log Amplifiers, Precision rectifiers.

UNIT – IV: ACTIVE FILTERS, ANALOG MULTIPLIERS AND MODULATORS:

Design & Analysis of Butterworth active filters – 1st order, 2nd order LPF, HPF filters. Band pass, Band reject and all pass filters. Four Quadrant Multiplier, IC 1496, Sample & Hold circuits.

UNIT – V: TIMERS & PHASE LOCKED LOOPS:

Introduction to 555 timer, functional diagram, Monostable and Astable operations and applications, Schmitt Trigger; PLL - introduction, block schematic, principles and description of individual blocks, 565 PLL, Applications of PLL – frequency multiplication, frequency translation, AM, FM & FSK demodulators. Applications of VCO (566).

UNIT – VI: DIGITAL TO ANALOG AND ANALOG TO DIGITAL CONVERTERS:

Introduction, basic DAC techniques, weighted resistor DAC, R-2R ladder DAC, inverted R-2R DAC, and IC 1408 DAC, Different types of ADCs – parallel Comparator type ADC, counter type ADC, successive approximation ADC and dual slope ADC. DAC and ADC Specifications, Specifications AD 574 (12 bit ADC).

Text books:

1. Linear Integrated Circuits – D. Roy Choudhury, New Age International (p) Ltd, 2nd Edition, 2003.
2. Op-Amps & Linear ICs - Ramakanth A. Gayakwad, PHI, 1987.

MICROPROCESSORS AND MICROCONTROLLERS (16EC6T20)

Course objectives: The student will

1. Study the organization and architecture of 8086 Micro Processor.
2. Study addressing modes to access memory, programming principles for 8086.
3. Study the interfacing of 8086 MP with I/O as well as other devices. 4. Study 8051 micro controller architecture & I/O ports.
5. Study the concept of PIC Microcontrollers like register & I/O ports. 6. Study the concept of Programming in C for PIC microcontroller.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Analyze the concepts of architecture and key features of 8086 Microprocessor.	Analyzing
CO2	Construct the knowledge about different addressing modes & Instruction sets of 8086 microprocessor.	Applying
CO3	Understand the concept of Interfacing 8086 microprocessor with other I/O peripherals.	Understanding
CO4	Analyze the advances in Microprocessors (80386 & 80486) and their architectural differences.	Analyzing
CO5	Apply the concepts of 8051 microcontroller for simple applications.	Applying
CO6	Develop the concepts of PIC microcontroller & USART in Project applications.	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	-	-	-	1	-	-	-	-	-	-	-	1	2
CO2	3	-	1	-	1	-	-	-	-	-	-	-	1	2
CO3	3	-	-	-	1	-	-	-	-	-	-	-	1	2

CO6	3	-	-	-	1	-	-	-	-	-	-	-	1	-

UNIT-I:

Introduction to Microprocessor Architecture: Introduction and evolution of Microprocessors– Architecture of 8086–Register Organization of 8086–Memory organization of 8086– General bus operation of 8086–Introduction to 80286–80386 and 80486 and Pentium.

UNIT-II:

Minimum and Maximum Mode Operations: Instruction set, Addressing modes– Minimum and Maximum mode operations of 8086–8086 Control signal interfacing–Read and write cycle timing diagrams.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-III:

I/O Interface: 8255 PPI- Architecture of 8255–Modes of operation– Interfacing I/O devices to 8086 using 8255–Interfacing A to D converters– Interfacing D to A converters– Stepper motor interfacing– Static memory interfacing with 8086–DMA controller (8257)–Architecture– Interfacing 8257 DMA controller– Programmable Interrupt Controller (8259)–Command words and operating modes of 8259– Interfacing of 8259–Keyboard/display controller (8279)–Architecture–Modes of operation–Command words of 8279– Interfacing of 8279.

UNIT-IV:

80386 AND 80486 MICROPROCESSORS-Introduction, programming concepts, special purpose registers, memory organization, moving to protected mode, virtual mode, memory paging mechanism, architectural differences between 80386 and 80486 microprocessors.

UNIT- V:

Introduction to 8051 Micro Controller-Overview of 8051 Micro Controller– Architecture– Register set– I/O ports and Memory Organization– Interrupts–Timers and Counters–Serial Communication. Applications in power systems

UNIT- VI:

PIC Architecture-Block diagram of basic PIC 16F8XX micro controller, registers I/O ports.

Programming in C for PIC- Data types, I/O programming, logical operations, data conversion

Text Books

1. Microprocessors and Interfacing – Programming and Hardware -Douglas V Hall, SSSP Rao, 3rd Edition, Tata McGraw Hill Education Private Limited.

NEURAL NETWORKS AND FUZZY LOGIC (16EE6E01)

(Open Elective)

Preamble: This course introduces the basics of Neural Networks and essentials of Artificial Neural Networks. Also introduces Fuzzy sets and Fuzzy Logic system components and Genetic Algorithms. The Neural Network, Fuzzy Network System and Genetic Algorithms applications to Electrical Engineering is also presented. This subject is very important and useful for doing Project Work.

Course Objectives:

This course enables the students to

- Study various methods of AI.
- Study the models and architecture of artificial neural networks.
- Understand the fundamental concept of ANN and Different architectures, Learning/Training algorithms and methodologies.
- Understand the concepts of Fuzzy sets and Fuzzy logic controllers.
- Understand the basics in Genetic algorithm.
- Gain knowledge in neuro-fuzzy control and its applications in power systems and power electronics.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Analyze various models of Artificial Neuron.	Analyzing
CO2	Understand the difference between knowledge based systems and Algorithmic based systems.	Understanding
CO3	Analyze Multi-layer feed-forward network.	Analyzing
CO4	Identify classical sets with fuzzy sets.	Applying
CO5	Apply different modules of Fuzzy logic controller	Applying
CO6	Apply soft computing techniques for real-world problems.	Applying

Mapping of COs with POs and PSOs

Unit – I: Introduction to Neural Networks

Introduction, Humans and Computers, Organization of the Brain, Biological Neuron, Biological and Artificial Neuron Models, Hodgkin-Huxley Neuron Model, Integrate-and-Fire Neuron Model, Spiking neuron Model, Characteristics of ANN, McCulloch-Pitts Model, Historical Developments, Potential, Applications of ANN.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

Unit- II: Essentials of Artificial Neural Networks

Artificial Neuron Model, Operations of Artificial Neuron, Types of Neuron Activation Function, ANN Architectures, Classification Taxonomy of ANN – Connectivity, Neural Dynamics (Activation and Synaptic), Learning Strategy (Supervised, Unsupervised, Reinforcement), Learning Rules, Types of Application

Unit-III:

Multilayer feed forward Neural Networks

Credit Assignment Problem, Generalized Delta Rule, Derivation of Back propagation (BP) Training, Summary of Back propagation Algorithm, Kolmogorov Theorem, Learning Difficulties and Improvements, Radial Basis Function (RBF) Neural Network – Kohonen Self Organising feature Map (KSOM).

Associative Memories

Bidirectional Associative Memories (BAM)-Architecture of Hopfield Network: Discrete and Continuous versions, Storage and Recall Algorithm, Stability Analysis, Capacity of the Hopfield Network, Summary and Discussion of Instance/Memory Based Learning Algorithms, Applications.

UNIT- IV: Classical & Fuzzy Sets:

Introduction to classical sets - properties, Operations and relations; Fuzzy sets, Membership, Uncertainty, Operations, properties, fuzzy relations, cardinalities, membership functions.

UNIT – V:Fuzzy Logic Modules:

Fuzzy Logic System Components: Fuzzification, Membership value assignment, development of rule base and decision making system, Defuzzification to crisp sets, Defuzzification methods.

UNIT-VI : Neural network and fuzzy logic Applications

Neural network applications: Process identification, control, fault diagnosis and load forecasting.

Fuzzy logic applications: Load frequency control and Fuzzy classification

Text Books:

1. Neural Networks, Fuzzy logic, Genetic algorithms: synthesis and applications by S. Rajasekaran and G.A. Vijayalakshmi Rai – PHI Publication.

ENERGY AUDIT, CONSERVATION & MANAGEMENT (16EE6E02)

(Open Elective)

Preamble:

This is an open elective course developed to cater the current needs of the industry, this course covers topics such as energy conservation act and energy conservation. It also covers energy efficient lighting design. The student will learn power factor improvement techniques, energy efficiency. In addition, the economic aspects such as payback calculations, life cycle costing analysis is covered in this course.

Course Objectives:

This course enables the students to

- Understand energy efficiency, scope, conservation and technology.
- Design energy efficient lighting systems.
- Estimate power factor of systems and propose suitable compensation techniques.
- Understand space heating and ventilation methods.
- Calculate life cycle costing analysis and return on investment on energy efficient technologies.
- Understand the concepts and compute the economic aspects of energy consumption.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Analyze the principles of energy auditing along with energy conservation schemes and management methods.	Analyzing
CO2	Employ different illumination and energy conservation methods for effective lighting.	Applying
CO3	Acquire knowledge on power factor with improvement methods.	Applying
CO4	Differentiate space heating and ventilation methods.	Understanding
CO5	Calculate life cycle costing analysis and return on investment on energy efficient motors	Applying
CO6	Determination of recovery investment on energy efficient technologies.	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	-	-	-	-	-	-	2	3	2	3	-	-	-
CO2	2	1	-	-	-	-	1	-	-	-	-	-	-	1
CO3	3	2	1	-	-	-	-	-	-	-	-	-	-	1
CO4	2	3	-	-	-	2	-	-	-	-	-	-	-	1
CO5	3	3	1	-	-	-	-	-	-	-	1	-	-	1
CO6	1	1	-	-	-	-	-	-	-	-	3	-	-	-

UNIT-I: Energy Scenario and Basic Principles of Energy Audit, Management

Energy audit – Definitions – Concept – Types of audit –Energy index – Cost index – Pie charts – Sankey diagrams – Load profiles – Energy conservation schemes and energy saving potential– Principles of energy management – Initiating, planning, controlling, promoting, monitoring and reporting – Energy manager – Qualities and functions.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

UNIT-II : Lighting

Definition of terms and units. Luminous efficiency – Polar Curve-Calculation of illumination level – Illumination of inclined surface to beam– Luminance or brightness-Types of Lightning, Electric lighting fittings (luminaries)- Flood lightening – White Lightening and conducting polymers- Energy conservation measures.

UNIT-III: Power Factor and Energy Instruments

Power factor – Methods of improvement – Location of capacitors– Power factor with non linear loads – Effect of harmonics on Power factor –Numerical problems. Energy Instruments Watt-hour meter – Data loggers– Thermocouples – Pyrometers – Lux meters – Tong testers – Power analyzer.

UNIT – IV: Space Heating and Ventilation

Ventilation – Air-Conditioning (HVAC) and Water Heating: Introduction – Heating of buildings – Transfer of Heat-Space heating methods — Insulation – Cooling load – Electric water heating systems.

UNIT-V: Economic Aspects and Financial Analysis

Understanding energy cost - Economics Analysis – Depreciation Methods – Time value of money – Rate of return – Present worth method – Replacement analysis – Life cycle costing analysis – Energy efficient motors (basic concepts) – Economics of energy efficient motors and systems.

UNIT-VI: Computation of Economic Aspects

Need of investment, appraisal and criteria - Calculation of simple payback period–Return on investment – Net present value – Internal rate of return -Applications of life cycle costing analysis–Return on investment.

Text Books:

1. Energy efficient electric motors by John .C. Andreas, Marcel Dekker Inc Ltd–2nd edition, 1995
2. Electric Energy Utilization and Conservation by S C Tripathy, Tata McGraw hill publishing company Ltd. New Delhi.
3. Energy Conservation by P. Diwan and P. Dwivedi, Pentagon Press, 2008.
4. Industrial Energy Management: Principles and Applications by Giovanni and Petrecca, The Kluwer international series-207 (1999)

References:

	L	T	P	C
3		1	0	3

Course objectives: The main objectives of this course are:

1. To enable the student to visualize MOS fabrication technologies and to understand electrical properties of MOS, CMOS and Bi CMOS circuits.
2. To train the student to draw integrated circuit layouts and stick diagrams following Lambda based design rules.
3. To gain knowledge in Basic circuit concepts and scaling for advanced VLSI design technology.
4. To learn input and output circuits of a Chip and testing and verification in VLSI design.
5. To understand the types of Architectures, Technologies and Families related to FPGA Design
6. To provide knowledge for the students on the importance to go for Low power VLSI and design applications.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Demonstrate a clear understanding of CMOS fabrication flow and impact of electrical properties of MOS circuits in semiconductor industry.	Analyzing
CO2	Know three sets of design rules with which NMOS and CMOS design may be fabricated.	Applying
CO3	Identify the interactions between process parameters, device structures, circuit performance for system design.	Analyzing
CO4	Explain complex digital systems using VLSI design methodology through testing and verification.	Understanding
CO5	Analyze the types of FPGA's and their programming technologies, programmable logic block architectures and their interconnect.	Analyzing
CO6	Estimate the power dissipation in VLSI circuits through study of Switching capacitance, interconnect and clock.	Applying

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-I: Introduction and Basic Electrical Properties of MOS Circuits: Introduction to IC technology, Fabrication process: nMOS, pMOS and CMOS. I_{ds} versus V_{ds} Relationships, Aspects of MOS transistor Threshold Voltage, MOS transistor Trans, Output Conductance and Figure of Merit. nMOS Inverter, Pull-up to Pull-down Ratio for nMOS inverter driven by another nMOS inverter, and through one or more pass transistors. Alternative forms of pull-up, The CMOS Inverter, Latch-up in CMOS circuits, Bi-CMOS Inverter, Comparison between CMOS and BiCMOS technology.

UNIT-II: MOS and Bi-CMOS Circuit Design Processes: MOS Layers, Stick Diagrams, Design Rules and Layout, General observations on the Design rules, $2\mu\text{m}$ Double Metal, Double Poly, CMOS/BiCMOS rules, $1.2\mu\text{m}$ Double Metal, Double Poly CMOS rules, Layout Diagrams of NAND and NOR gates and CMOS inverter, Symbolic Diagrams Translation to Mask Form.

UNIT-III: Basic Circuit Concepts: Sheet Resistance, Sheet Resistance concept applied to MOS transistors and Inverters, Area Capacitance of Layers, Standard unit of capacitance, Some area Capacitance Calculations, The Delay Unit, Inverter Delays, Driving large capacitive loads, Propagation Delays, Wiring Capacitances, Choice of layers.

Scaling of MOS Circuits: Scaling models and scaling factors, Scaling factors for device parameters, Limitations of scaling, Limits due to sub threshold currents, Limits on logic levels and supply voltage due to noise and current density. Switch logic, Gate logic.

UNIT-IV: Chip Input and Output circuits: ESD Protection, Input Circuits, Output Circuits and $L(di/dt)$ Noise, On-Chip clock Generation and Distribution.

Design for Testability: Fault types and Models, Controllability and Observability, Ad Hoc Testable Design Techniques, Scan Based Techniques and Built-In Self Test techniques.

UNIT-V:

FPGA Design: FPGA design flow, Basic FPGA architecture, FPGA Technologies, FPGA families- Altera Flex 8000FPGA, Altera Flex 10FPGA, Xilinx XC4000 series FPGA, Xilinx Spartan XL FPGA, Xilinx Spartan II FPGAs, Xilinx Vertex FPGA. Case studies: FPGA Implementation of Half adder and full adder.

Introduction to synthesis: Logic synthesis, RTL synthesis, High level Synthesis.

UNIT-VI:

Introduction to Low Power VLSI Design: Introduction to Deep submicron digital IC design, Low Power CMOS Logic Circuits: Over view of power consumption, Low –power design through voltage scaling, Estimation and optimisation of switching activity, Reduction of switching capacitance. Interconnect Design, Power Grid and Clock Design.

Test books

1. Essentials of VLSI Circuits and Systems - Kamran Eshraghian, Douglas and A. Pucknell and Sholeh Eshraghian, Prentice-Hall of India Private Limited, 2005 Edition.
2. CMOS Digital Integrated Circuits Analysis and Design- Sung-Mo Kang, Yusuf Leblebici, Tata McGrawHill Education, 2003.

References

1. Advanced Digital Design with the Verilog HDL, Michael D.Ciletti, Xilinx Design Series, Pearson Education

ROBOTICS (16ME6E01)

Course Objectives:

To make the students aware of:

1. Robot applications, classifications, controlling systems and automation.
2. Robot components, their architecture, work envelope and types of drive systems.
3. Homogeneous transformations and Manipulator Kinematics of robots.
4. Robotic arm motion by using Mathematical approach.
5. Trajectory planning for a manipulator by avoiding obstacles and programming languages, software packages for path description to robots.
6. Functioning of sensors, actuators and Robot applications in manufacturing.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Classify the coordinate systems and control systems of a robot.	Understanding
CO2	Explain the architecture of a robot.	Understanding
CO3	Analyze kinematics of a serial manipulator.	Analyzing
CO4	Analyze dynamics of serial manipulator.	Analyzing
CO5	Develop the trajectory planning algorithms using programming languages.	Applying
CO6	Illustrate the applications of robots in manufacturing, select the actuators and feedback components for a given robot application.	Applying

Mapping of COs with POs and PSOs

CO6	1	1	-	-	2	-	-	-	-	-	-	-	-	-

UNIT – I

Introduction: Automation and Robotics, CAD/CAM and Robotics – An over view of Robotics – present and future applications – classification by coordinate system and control system.

UNIT – II

Components of the Industrial Robotics: Function line diagram representation of robot arms, common types of arms. Components, Architecture, number of degrees of freedom – Requirements and challenges of end effectors, determination of the end effectors, comparison of Electric, Hydraulic and Pneumatic types of locomotion devices.

UNIT – III

Motion Analysis: Homogeneous transformations as applicable to rotation and translation – problems.

Manipulator Kinematics: Specifications of matrices, D-H notation joint coordinates and world coordinates Forward and inverse kinematics – problems.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – IV

Differential transformations and manipulators , Jacobians–problems. **Dynamics:** Lagrange – Euler and Newton – Euler formulations – Problems.

UNIT V

General considerations in path description and generation Trajectory planning and avoidance of obstacles, path planning, Skew motion, joint integrated motion – straight line motion – Robot programming, languages and software packages-description of paths with a robot programming languages.

UNIT VI

Robot actuators and Feedback components:

Actuators: Pneumatic, Hydraulic actuators, electric & stepper motors.

Feedback components: position sensors – potentiometers, resolvers, encoders – Velocity sensors.

Robot Application in Manufacturing: Material Transfer - Material handling, loading and unloading Processing - spot and continuous arc welding & spray painting - Assembly and Inspection.

UNIX AND SHELL PROGRAMMING (16CS6E03)

Learning Objective:

Introduction to UNIX Operating System and its File System and to gain an understanding of important aspects related to the SHELL and the process utilities and service utilities.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Make use of basic Unix commands.	Applying
CO2	Analyze file system architecture to organize the file system.	Analyzing
CO3	Analyze shell command line structure	Analyzing
CO4	Design of filters in AWK language.	Analyzing
CO5	Implement commands using Shell Programming.	Analyzing
CO6	Create IPC between parent- child in Linux environment	Applying

CO5	3	3	1	-	2	-	-	-	-	-	-	-	-	1
CO6	1	1	-	-	2	-	-	-	-	-	-	-	-	1

UNIT-I

Introduction to UNIX -Brief History-What is Unix-Unix Components-Using Unix-Commands in Unix-Some Basic Commands-Command Substitution-Giving Multiple Commands.

UNIT-II

The File system –The Basics of Files-What’s in a File-Directories and File Names-Permissions-I Nodes-The Directory Hierarchy, File Attributes and Permissions-The File Command knowing the File Type-The chmod Command Changing File Permissions-The chown Command Changing the Owner of a File-The chgrp Command Changing the Group of a File.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-III

Using the Shell-Command Line Structure-Met characters-Creating New Commands-Command Arguments and Parameters-Program Output as Arguments-Shell Variables- -More on I/O Redirection- Looping in Shell Programs.

UNIT-IV

Filters-The Grep Family-Other Filters-The Stream Editor Sed-The AWK Pattern Scanning and processing Language-Good Files and Good Filters.

UNIT-V

Shell Programming-Shell Variables-The Export Command-The Profile File a Script Run During Starting-The First Shell Script-The read Command-Positional parameters-The \$? Variable knowing the exit Status-More about the Set Command-The Exit Command-Branching Control Structures-Loop Control Structures-The Continue and Break Statement

UNIT-VI

The Process-The Meaning-Parent and Child Processes-Types of Processes-More about Foreground and Background processes-Internal and External Commands-Process Creation-The Trap Command-The stty Command-The Kill Command-Job Control.

TEXT BOOKS:

1. The Unix programming Environment by Brain W. Kernighan & Rob Pike, Pearson.

OOPS through JAVA (16IT6E03)

COURSE OBJECTIVES:

- To make the students understand the fundamentals of Java programming and how to use Java to write applications.
- To train the learners to implement and use inheritance and polymorphism, including interfaces and abstract classes, Packages.
- To make the students to design appropriate Exception Handling in Java methods.
- To make the students to understand the concepts of Threads, Files and I/O Streams, Applets in java.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Write, debug, and document well-structured java applications.	Remembering
CO2	Implement java classes from specifications.	Applying
CO3	Build applications by using Inheritance.	Analyzing
CO4	Write programs by using threads and exception handling.	Analyzing
CO5	Develop applets.	Analyzing
CO6	Explore AWT and event handling package.	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	-	-	-	1	-	-	-	-	-	-	-	-	-
CO2	2	1	-	-	2	-	-	-	-	-	-	-	-	-
CO3	3	2	1	-	2	-	-	-	-	-	-	-	-	1
CO4	2	3	-	-	2	-	-	-	-	-	-	-	-	1
CO5	3	3	1	-	2	-	-	-	-	-	-	-	-	1
CO6	1	1	-	-	2	-	-	-	-	-	-	-	-	1

UNIT I:

Introduction to OOP: Introduction, Need of Object Oriented Programming, Principles of Object Oriented Languages, C++ vs. Java, Applications of OOP, History of JAVA, Java Virtual Machine, Java Features, Program structures, Installation of JDK1.6 Variables , Primitive Data types, Identifiers- Naming Conventions, Keywords, Literals.

UNIT II:

Programming Constructs Operators- Binary, Unary and ternary, Expressions, Precedence rules and Associative, Primitive Type Conversion and Casting, Flow of control- Conditional, loops., **Classes and Objects-** Classes, Objects, Creating Objects, Methods, constructors-Constructor overloading, cleaning up unused objects-Garbage collector, Class variable and Methods-Static keyword, this keyword, Arrays, Command line arguments.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM (Autonomous)

UNIT III:

Inheritance: Types of Inheritance, Deriving classes using extends keyword, Method overloading, super keyword, final keyword, Abstract class

Interfaces, Packages and Enumeration: Interface-Extending interface, Interface vs. Abstract classes, Packages-Creating packages, using Packages, Access protection, java.lang package.

UNIT IV:

Exceptions & Assertions – Introduction, Exception handling techniques-try...catch, throw, throws, finally block, user defined exception, Exception Encapsulation and Enrichment, Assertions

Multi-Threading: java.lang.Thread, the main Thread, Creation of new threads, Thread priority, Multithreading- Using isAlive() and join(), Synchronization, suspending and Resuming threads, Communication between Threads

UNIT V:

Input/output: reading and writing data, java.io package

Applets- Applet class, Applet structure, An Example Applet Program, Applet Life Cycle, paint(), update() and repaint().

UNIT VI:

Event Handling: Introduction, Event Delegation Model, java.awt.event Description, Sources of Events, Event Listeners, Adapter classes, Inner classes

Abstract Window Toolkit: Why AWT?, java.awt package, Components and Containers, Button, Label, Checkbox, Radio buttons, List boxes, Choice boxes, Text field and Text area, container classes, Layouts, Menu, Scroll bar

POWER ELECTRONICS LAB (16EE6L08)

Course objectives:

This course enables the students to

- Study the characteristics of various power electronic devices and analyze firing circuits and commutation circuits of SCR.
- Analyze the performance of single-phase half and three-phase full converters with both resistive and inductive loads.
- Understand the operation of AC voltage controller with resistive and inductive loads.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Study the characteristics of SCR, MOSFET, IGBT and firing circuits of SCR.	Analyzing
CO2	Analyze the operation of AC-DC, DC-AC and AC-AC converters.	Analyzing
CO3	Compare forced commutation circuits of SCR	Analyzing

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	2	-	-	1	-	-	-	2	-	-	-	2	1
CO2	2	3	1	-	1	-	-	-	2	-	-	-	2	1
CO3	2	2	-	-	1	-	-	-	2	-	-	-	1	1

ANY TEN OF THE FOLLOWING EXPERIMENTS ARE TO BE CONDUCTED

1. Study of Characteristics of SCR, MOSFET & IGBT.
2. Gate triggering circuits for SCR's.
3. Single -Phase half controlled bridge converter with R and RL loads.
4. Single -Phase AC Voltage Controller with R and RL Loads.
5. Single -Phase Cyclo-converter with R and RL loads.
6. Single -Phase Bridge Inverter with R Load.
7. Three- Phase full converter with RL load.
8. Four quadrant operation of chopper.
9. Three -phase PWM inverter.
10. Forced commutation circuits (Class A, Class B, Class C, Class D).
11. Single phase Dual converter with R & RL loads (Circulating & Non-Circulating modes).
12. PWM Inverter based speed control of Induction motor.

ELECTRICAL MEASUREMENTS LAB (16EE6L09)

Course objectives:

This course enables the students to

- Understand the correct function of electrical parameters and calibration of voltage, current, single phase and three phase power and energy, and measurement of electrical characteristics of resistance, inductance and capacitance of a circuit through appropriate methods.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:		
CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Measure the electrical parameters voltage, current, power, energy and electrical characteristics of resistance, inductance and capacitance.	Applying
CO2	Measure the parameters of inductive coil.	Applying
CO3	Calibration and testing of LPF Wattmeter, Energy meter and Dynamometer type power factor meter.	Applying

Mapping of COs with POs and PSOs														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO2	2	2	-	-	-	-	-	-	1	-	-	-	1	1
CO3	2	2	1	-	-	-	-	-	1	-	-	-	1	1

ANY TEN OF THE FOLLOWING EXPERIMENTS ARE TO BE CONDUCTED

1. Testing of single phase Energy Meter using phantom loading.
2. Calibration of dynamometer type UPF wattmeter using phantom loading.
3. Calibration of PMMC ammeter and voltmeter using Crompton D.C. Potentiometer.
4. Measurement of resistance and Determination of Tolerance using Kelvin's double Bridge.
5. Capacitance Measurement using Schering bridge.
6. Inductance Measurement using Anderson bridge.
7. Measurement of reactive power in 3-phase balanced loads using single phase wattmeter.
8. Calibration of LPF wattmeter by direct loading.
9. Measurement of 3- phase active power using single watt meter and C.Ts.
10. Calibration of Dynamometer Type Power Factor Meter.
11. Measurement of choke coil Parameters by using 3-ammeter and 3-Voltmeter method.
12. Measurement of Active Power by 3 Voltmeter and 3 Ammeter methods.

PROFESSIONAL ETHICS AND HUMAN VALUES (16BH6T17)

Unit I

Professional Ethics and Human values: Ethics -History of Ethics-Types of Ethics, Professional Ethics and its forms-Significance-Personal ethics vs Professional Ethics, Morals, Values – Integrity – Work Place Ethics and Business Ethics –Ethics in HRM, Finance, Marketing Management – Civic Virtue –Respect for others – Living Peacefully – Caring – Sharing – Honesty –Courage – Value time –Co-operation – Commitment – Empathy – Self-confidence – Spirituality- Character.

Unit II

Engineering Ethics: Engineering Ethics-Meaning & Purpose of Engineering Ethics-Consensus and Controversy –Profession, Professional and Professionalism –Key Characteristics of Engineering Professionals–Professional Roles to be played by an Engineer-Self Interest, Customs and Religion- Ethical Theories-Meaning & Uses of Ethical Theories-Types of Inquiry -Theories of moral Development-Kohlberg’s Theory – Gilligan’s Argument –Heinz’s Dilemma.

Unit III

Engineering as Social Experimentation: Comparison with Standard Experiments – Knowledge gained – Conscientiousness – Relevant Information – Learning from the Past – Engineers as Managers, Consultants, and Leaders – Accountability – Role of Codes – Codes and Experimental Nature of Engineering- Ethical issues involved in Clinical Trials.

Unit IV

Engineers’ Responsibility for Safety and Risk: Concept of Safety-Types of Safety, Risk-Types of Risks, Voluntary v/s Involuntary Risk- Short term v/s Long term Consequences-Expected Probability- Reversible Effects- Threshold Levels for Risk- Delayed v/s Immediate Risk- Safety and the Engineer – Designing for Safety – Risk-Benefit Analysis-Accidents.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

Unit V

Engineers Responsibilities and Rights: Collegiality-Techniques for Achieving Collegiality –Loyalty -Two Senses of Loyalty-obligations of Loyalty-Misguided Loyalty – professionalism and Loyalty- Professional Rights –Professional Responsibilities – confidential and proprietary information-Conflict of Interest-solving conflict problems - Ethical egoism-Collective bargaining-Confidentiality-Acceptance of Bribes/Gifts when is a Gift and a Bribe-examples of Gifts v/s Bribes-problem solving-interests in other companies-Occupational Crimes-industrial espionage-price fixing-endangering lives-Whistle Blowing-types of whistle blowing-when should it be attempted-preventing whistle blowing.

Unit VI

Global Issues: Globalization-Problems of globalization- Cross-culture Issues-Environmental Ethics-Computer Ethics-computers as the instrument of Unethical behavior-computers as the object of Unethical Acts-autonomous computers-computer codes of Ethics-Weapons Development-Ethics and Research-Analyzing Ethical Problems in Research-Food and Drug Adulteration.

Relevant case studies shall be dealt where ever necessary.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – I : Selection of Motors

Choice of motor, type of electric drives, starting and running characteristics– Speed control–Temperature rise–Applications of electric drives–Types of industrial loads–continuous–Intermittent and variable loads–Load equalization.

UNIT – II : Illumination fundamentals

Introduction, terms used in illumination–Laws of illumination–Polar curves– Integrating sphere–Lux meter–Discharge lamps, Mercury Vapour and Sodium Vapour lamps – Lumen or flux method of Calculation–Sources of light

UNIT – III : Various Illumination Methods

Comparison between tungsten filament lamps and fluorescent tubes–Basic principles of light control– Types and design of lighting and flood lighting–LED lighting, principle of operation, street lighting and domestic lighting – Conservation of energy.

UNIT – IV: Electric Heating and Welding

Advantages and methods of electric heating–Resistance heating, induction heating and dielectric heating, Arc Furnaces- Direct arc furnaces and Indirect arc furnaces.

Electric welding–Resistance and arc welding–Electric welding equipment– Comparison between AC and DC Welding.

UNIT – V : Electric Traction – I

System of electric traction and track electrification– Review of existing electric traction systems in India– Special features of traction motor– Mechanics of train movement–Speed–time curves for different services – Trapezoidal and quadrilateral speed time curves.

UNIT – VI : Electric Traction – II

Calculations of tractive effort– power –Specific energy consumption for given run–Effect of varying acceleration and braking retardation–Adhesive weight and braking, retardation adhesive weight and coefficient of adhesion–Principles of energy efficient motors.

RENEWABLE ENERGY SOURCES (16EE7T21)

Preamble:

This course gives a flavor of renewable sources and systems to the students. It introduces solar energy its radiation, collection, storage and its applications. This covers generation, design, efficiency and characteristics of various renewable energy sources including solar, wind, hydro, biomass, fuel cells and geothermal systems.

Course Objectives:

This course enables the students to

- Study the solar radiation data, extra terrestrial radiation, radiation on earth's surface.
- Understand the solar thermal collections.
- Study the solar photo voltaic systems.
- Observe the maximum power point techniques in solar PV and wind energy.
- Get knowledge on wind energy conversion systems, Betz coefficient, tip speed ratio.
- Study basic principle and working of hydro, tidal, biomass, geothermal and fuel cell systems.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Analyze solar radiation data, extraterrestrial radiation, radiation on earth's surface.	Analyzing
CO2	Develop solar thermal collections.	Applying
CO3	Develop maximum power point techniques in solar photo voltaic systems.	Analyzing
CO4	Explain wind energy conversion systems, Betz coefficient, tip speed ratio and develop maximum power point techniques in wind.	Analyzing
CO5	Explain basic principle and working of hydro, tidal, and wave energy	Analyzing
CO6	Explain basic principle and working of biomass, fuel cell and geothermal systems.	Analyzing

Mapping of COs with POs and PSOs

CO5	3	2	1	1	-	-	1	-	-	-	-	1	-	1
CO6	3	2	1	1	-	-	1	-	-	-	-	1	-	-

UNIT-I : Fundamentals of Energy Systems and Solar energy

Energy conservation principle – Energy scenario (world and India) – various forms of renewable energy - Solar radiation: Outside earth's atmosphere – Earth surface – Analysis of solar radiation data – Geometry – Radiation on tilted surfaces – instruments for measuring solar radiation and sun shine.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM (Autonomous)

UNIT-II : Solar Thermal Systems

Liquid flat plate collectors: Performance analysis –Transmissivity– Absorptivity product collector efficiency factor – Collector heat removal factor. Introduction to solar air heaters – Concentrating collectors, solar pond and solar still – solar thermal plants.

UNIT-III : Solar Photovoltaic Systems

Solar photovoltaic cell, module, array – construction – Efficiency of solar cells – Developing technologies – Cell I-V characteristics – Equivalent circuit of solar cell – Series resistance – Shunt resistance – Applications and systems – Balance of system components - System design: storage sizing – PV system sizing – Maximum power point techniques: Perturb and observe (P&O) technique – Hill climbing technique.

UNIT-IV: Wind Energy

Sources of wind energy - Wind patterns – Types of turbines –Horizontal axis and vertical axis machines - Kinetic energy of wind – Betz coefficient – Tip–speed ratio – Efficiency – Power output of wind turbine – Selection of generator(synchronous, induction) – Maximum power point tracking – wind farms – Power generation for utility grids.

UNIT-V : Hydro and Tidal power systems

Basic working principle – Classification of hydro systems: Large, small, micro – measurement of head and flow – Energy equation – Types of turbines. Tidal power – Basics – Kinetic energy equation – Turbines for tidal power -Wave power – Basics – Kinetic energy equation – Wave power devices – Linear generators.

UNIT-VI : Biomass, fuel cells and geothermal systems

Biomass Energy: Fuel classification – Pyrolysis – Direct combustion of heat – Different digesters and sizing.

Fuel cell: Classification of fuel for fuel cells – Fuel cell voltage– Efficiency – V-I characteristics.

Geothermal: Classification – Dry rock and hot acquifer – Energy analysis – Geothermal based electric power generation.

POWER SYSTEMS OPERATION AND CONTROL (16EE7T22)

Preamble:

This subject deals with Economic operation of Power Systems, Hydrothermal scheduling and modeling of turbines, generators and automatic controllers. It emphasizes on single area and two area load frequency control and reactive power control.

Course Objectives:

The course enables the students to

- Understand optimal dispatch of generation with and without losses.
- Study the optimal scheduling of hydro thermal systems.
- Solve the unit commitment problem using priority ordering and dynamic programming approach.
- Model power-frequency dynamics for studying the load frequency control for single area system with and without controllers
- Study the load frequency control for two area system with and without controllers
- Understand the reactive power control and compensation of transmission lines.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Assess the optimum allocation of generation among Generators for economic operation of the power system	Analyzing
CO2	Estimate the optimal scheduling of hydro thermal systems using various methods	Analyzing
CO3	Identify the optimal scheduling of optimal unit commitment problem	Applying
CO4	Analyze the importance of the frequency and modeling of power plant.	Analyzing
CO5	Apply the importance of PID controllers in single area and two area systems.	Applying
CO6	Identify suitable compensating equipment for reactive power control and Series and/or Shunt compensation of transmission lines.	Applying

Mapping of COs with POs and PSOs

CO6	3	1	1	2	-	-	-	-	-	-	1	-	1	2

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

UNIT-I: Economic Operation of Power Systems

Optimal operation of Generators in Thermal power stations, – Heat rate curve – Cost Curve – Incremental fuel and Production costs – Input–output characteristics – Optimum generation allocation with line losses neglected – Optimum generation allocation including the effect of transmission line losses – Loss Coefficients – General transmission line loss formula.

UNIT-II: Hydrothermal Scheduling

Optimal scheduling of Hydrothermal System: Hydroelectric power plant models – Scheduling problems – Short term hydrothermal scheduling problem.

UNIT-III: Unit Commitment

Optimal unit commitment problem – Need for unit commitment – Constraints in unit commitment – Cost function formulation – Solution methods – Priority ordering – Dynamic programming.

UNIT-IV: Load Frequency Control-I

Modeling of steam turbine – Generator – Mathematical modeling of speed governing system – Transfer function – Modeling of Hydro turbine –Necessity of keeping frequency constant – Definitions of Control area – Single area control system – Block diagram representation of an isolated power system – Steady state analysis – Dynamic response – Uncontrolled case.

Proportional plus Integral control of single area and its block diagram representation – Steady state response.

UNIT-V: Load Frequency Control-II

Block diagram development of Load Frequency Control of two area system uncontrolled controlled case. Tie-line bias control. Load Frequency Control and Economic dispatch control.

UNIT-VI: Reactive Power Control

Overview of Reactive Power control – Reactive Power compensation in transmission systems – Advantages and disadvantages of different types of compensating equipment for transmission systems – Load compensation – Specifications of load compensator – Uncompensated and compensated transmission lines: Shunt and series compensation – Need for FACTS controllers.

POWER SYSTEM PROTECTION (16EE7T23)

Preamble:

To introduce different types of protection equipments and schemes for the protection of power system equipment.

Course Objectives:

This course enables the students to

- Study the different types of protection equipments in the power system.
- Understand the operation of circuit breakers and relays and their applications.
- Get Knowledge on the protection for generator and transformer in the power system.
- Understand the concept of static and digital relays for more accuracy and speed.
- Understand the concept of protection for Feeder and Bus bar in the power system
- Understand concept of protection against over voltage and grounding.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Identify the basic protection equipment types in power systems.	Applying
CO2	Analyze the working operation and construction of different types of circuit breakers and relays.	Analyzing
CO3	Propose the different types of protection schemes for generator and transformer in the power systems.	Applying
CO4	Identify the different types of protection schemes for feeders and bus bars in the power systems.	Applying
CO5	Compare the static, digital and electromagnetic relays for protection purpose.	Understanding
CO6	Examine the various scenarios for protection against over voltage and grounding.	Analyzing

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO3	1	1	1	-	-	-	-	-	-	-	-	1	1	1
CO4	1	1	1	-	-	-	-	-	-	-	-	1	-	1
CO5	1	1	1	-	-	-	-	-	-	-	-	1	1	1
CO6	1	1	1	-	-	-	-	-	-	-	-	1	1	1

UNIT-I: Fuses and Circuit Breakers:

Basics of protection and its significance.

Fuses: Introduction, types of fuses, ratings and specifications, HRC fuses and applications.

Circuit Breakers: Miniature Circuit Breaker (MCB)– Elementary principles of arc interruption– Restrike Voltage and Recovery voltages– Restrike phenomenon– Average and Max. RRRV– Current chopping and Resistance switching– Introduction to oil circuit breakers– Description and operation of Air Blast– Vacuum and SF6 circuit breakers– CB ratings and specifications– Auto reclosures.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-II: Electromagnetic Protection:

Relay connection– Balanced beam type attracted armature relay– induction disc and induction cup relays– Torque equation– Relays classification– Instantaneous– DMT and IDMT types– Applications of relays: Over current/under voltage relays– Directional relays– Differential relays and percentage differential relays– Universal torque equation– Distance relays: Impedance– Reactance– Mho and offset mho relays– Characteristics of distance relays and their comparison.

UNIT-III: Generator and Transformer Protection:

Protection of generators against stator faults– Rotor faults and abnormal conditions– restricted earth fault and inter turn fault protection.

Protection of transformers: Percentage differential protection– Design of CT's ratio– Buchholz relay protection.

UNIT-IV: Feeder and Bus bar Protection:

Protection of lines: Over current– Carrier current and three zone distance relay using impedance relays– Translay relay–Protection of bus bars– Differential protection

UNIT-V: Static and Digital Relays:

Static relays: Static relay components–Static over current relay– Static distance relay.

Digital relays: Micro processor based digital relays.

UNIT-VI: Protection against over voltage and grounding:

Generation of over voltages in power systems– Protection against lightning over voltages– Valve type and zinc–Oxide lightning arresters– Insulation coordination– Basic Insulation Level (BIL) – impulse ratio– Standard impulse test wave– volt time characteristics– Grounded and ungrounded neutral systems–Effects of ungrounded neutral on system performance– Methods of neutral grounding: Solid–resistance–Reactance–Arcing grounds and grounding Practices.

(Elective-I)

To develop the strategies for controlling the electrical motor drives it is crucial to have complete knowledge on modeling of electrical machines.

This course enables the students to

- Apply the modeling of dc and ac machines using Kron's primitive machine.
- Apply mathematical modeling concept to DC Machine.
- Understand the concept of phase transformation and to apply mathematical modelling of single phase induction machines.
- Analyze the performance of three phase Induction Machine.
- Evaluates the performance characteristics of machine in d-q modeling.
- Analyse the controlling strategies of different machines.

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Describe the generalized machine theory for all electrical machines.	Understanding
CO2	Develop the mathematical modeling of dc machine.	Analyzing
CO3	Apply the linear transformation and phase transformation on electrical machines	Applying
CO4	Apply mathematical modeling to Induction machines models.	Applying
CO5	Analyze control strategies based on dynamic modeling of 3-phase synchronous machine.	Analyzing
CO6	Analyze BLDC Machine, switched reluctance machine based on mathematical modeling.	Analyzing

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – I: Basic concepts of Modeling

Basic Two-pole Machine representation - Commutator machines, 3-phase synchronous machine with and without damper bars and 3-phase induction machine, Kron's primitive Machine-voltage, current and Torque equations.

UNIT – II: DC Machine Modeling

Mathematical model of separately excited D.C motor – Steady State analysis-Transient analysis-Sudden application of Inertia Load-Transfer function of Separately excited D.C Motor- Mathematical model of Series motor, Shunt motor-Linearization Techniques for small perturbations.

UNIT- III: Reference frame theory & Modeling of single phase Induction Machines

Linear transformation-Phase transformation - three phase to two phase transformation (abc to dq0) and two phase to three phase transformation dq0 to abc -Power equivalence-Mathematical modeling of single phase induction machines.

UNIT – IV: Modeling of three phase Induction Machine

Generalized model in arbitrary reference frame-Electromagnetic torque-Derivation of commonly used Induction machine models- Stator reference frame model-Rotor reference frame model-Synchronously rotating reference frame model-state space model with flux linkages as variables.

UNIT –V: Modeling of Synchronous Machine

Synchronous machine inductances–voltage equations in the rotor's dq0 reference frame, electromagnetic torque-current in terms of flux linkages-three phase synchronous machine model.

UNIT –VI: Modeling of Special Machines

Modeling of PM Synchronous motor, modeling of BLDC motor, modeling of Switched Reluctance motor.

L	T	P	C
3	1	0	3

(Elective-I)

This subject aims to study state space, describing function, phase plane and stability analysis including controllability and observability. It also deals with modern control and optimal control systems.

This course enables the students to

- Review of the state space representation of a control system
- Study the concept of controllability and observability.
- Analysis of a nonlinear system using Describing function approach and Phase plane analysis.
- Study the Lyapunov's method of stability analysis of a system.
- Understand the concept of calculus of variation.
- Formulation of linear quadratic optimal regulator (LQR) problem by parameter adjustment and solving riccati equation.

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-I : State space analysis:

State Space Representation – Solution of state equation – State transition matrix, –Canonical forms – Controllable canonical form – Observable canonical form, Jordan Canonical Form.

UNIT-II : Controllability & Observability:

Tests for controllability and observability for continuous time systems –Time varying case – Time invariant case –Principle of duality – Controllability and observability form Jordan canonical form and other canonical forms – Effect of state feedback on controllability and observability.

UNIT-III : Describing function analysis

Introduction to nonlinear systems, Types of nonlinearities, describing functions, Introduction to phase–plane analysis.

UNIT-IV :Stability analysis

Stability in the sense of Lyapunov – Lyapunov’s stability and Lyapunov’s instability theorems – Direct method of Lyapunov for the linear and nonlinear continuous time autonomous systems.

UNIT-V : Calculus of variations

Minimization of functional of single function – Constrained minimization –Minimum principle – Control variable inequality constraints – Control andstate variable inequality constraints – Euler lagrangine equation.

UNIT-VI : Optimal control

Linear quadratic optimal regulator (LQR) problem formulation – Optimalregulator design by parameter adjustment (Lyapunov method) – Optimal regulator design by continuous time algebraic riccati equation (CARE) - Optimal controller design using LQG framework.

INDUSTRIAL AUTOMATION AND CONTROL (16EE7D03)

(Elective-I)

Preamble:

This subject aims to study structure & components Industrial Automation systems. It also deals with architectural levels of Industrial controls.

Course Objectives:

This course enables the students to

- Understand the significance of PLC in industrial applications.
- Study the basic instructions in PLC.
- Study the Data manipulation, math instructions and registers.
- Know the applications of PLC.
- Understand the basics of SCADA.
- Know the protocols involved in SCADA for industrial applications.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Interpret the concept of PLC in industrial applications.	Applying
CO2	Distinguish the working of PLC with the help of a Ladder diagram.	Analyzing
CO3	Setup PLC registers for effective utilization in different applications.	Applying
CO4	Arrange the programs with ladder diagrams for appropriate applications of PLC	Applying
CO5	Distinguish the architecture of SCADA and importance of SCADA in critical infrastructure	Applying
CO6	Initiate the debug and test the programs developed for digital and analog operations.	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	1	2	1	-	-	-	-	-	-	-	2	-	2
CO2	3	2	1	2	2	-	-	-	-	-	-	2	2	2
CO3	3	2	1	1	-	-	-	-	-	-	-	2	-	2
CO4	3	2	2	2	2	-	-	-	-	-	-	2	2	2
CO5	3	-	2	-	-	-	-	-	-	-	-	2	-	2
CO6	3	-	2	-	-	-	-	-	-	-	-	2	-	1

UNIT-I: Introduction to PLC

Role of automation in Industries, benefits of automation, Necessity of PLC, Definition, PLC system, PLC Input and output modules (along with Interfaces), CPU, programmers and monitors, power supplies, Solid state memory , advantages and disadvantages

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

UNIT-II: PLC Instructions

Programming equipment, Various techniques of programming, proper construction of ladder diagram, basic components and their symbols in ladder diagram, Boolean logic and relay logic. Timer and counter-types along with timing diagrams, Timer instructions and Counter instructions- Counter Applications, Combining counter and timer functions.

UNIT-III: Other Instructions

Data manipulation – Data transfer operation – Data compare instruction – Data manipulation programs – Numerical data I/O interfaces – Math instructions- Sequential instructions – Sequence programs – Shift registers – Word shift registers.

UNIT-IV: Applications of PLC

PLC interface to various circuits : Measurement of temperature, Tank level control, ON OFF temperature control, elevator, Alarm Monitor, car parking Motors Controls: AC Motor starter, AC motor overload protection, DC motor controller, Variable speed (Variable Frequency) AC motor Drive. Ladder diagram for process control – PID controller.

UNIT-V: SCADA Systems:

Introduction to Supervisory Control and Data Acquisition, typical SCADA system Architecture, Communication requirements. Features, advantages, disadvantages and applications of SCADA.

UNIT-VI: SCADA Protocols

Open systems interconnection (OSI) Model, TCP/IP protocol, DNP3 protocol, IEC61850 layered architecture, Control and Information Protocol (CIP), Device Net, Control Net, Ether Net/IP, Flexible Function Block process (FFB), Process Field bus (Profibus).

INSTRUMENTATION (16EE7D04)
(Elective-I)

Preamble:

To enrich the students to acquire knowledge about various types of data/ information transmission methods and different types of display devices. To provide knowledge on various types of transducers, Wave analyzers their construction and functioning.

Course Objectives:

This course enables the students to

- Study about different types of signal and data processing techniques.
- Understand the classification of transducers.
- Obtain knowledge in evaluation of strain, torque, displacement, velocity, angular velocity, temperature, pressure and vacuum using transducer.
- Understand the concept of measuring frequency, phase with oscilloscopes.
- Study about wave analyzer and their practical applications and usage.
- Obtain knowledge in sensors and their usage.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Describe the characteristics of measuring system and analyze the signal processing techniques	Applying
CO2	Identify the various transducers used for various applications.	Analyzing
CO3	Illustrate the ways to measure parameters such as strain, velocity, temperature, pressure etc	Applying
CO4	Demonstrate the construction of C.R.O, data acquisition, display and storage	Applying
CO5	Discuss the operation of wave analyzers, harmonic analyzers, spectrum analyzers	Applying
CO6	Describe operation of different sensors and their usage.	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO2	2	2	1	1	-	-	-	-	-	-	-	-	1	-
CO3	2	2	-	-	-	-	-	-	-	-	-	-	-	-
CO4	2	1	1	1	-	-	-	-	-	-	-	-	1	-
CO5	2	1	-	-	-	-	-	-	-	-	-	-	1	1
CO6	2	1	1	1	-	-	-	-	-	-	-	1	-	1

UNIT-I: Signals and their representation

Measuring Systems, Performance Characteristics, – Static characteristics – Dynamic Characteristics – Errors in Measurement – Gross Errors – Systematic Errors – Statistical analysis of random errors – Signal and their representation – Standard test, periodic, aperiodic, modulated signal – Sampled data pulse modulation and pulse code modulation.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM (Autonomous)

UNIT-II: Transducers

Definition of transducers – Classification of transducers – Advantages of Electrical transducers – Characteristics and choice of transducers – Principle operation of resistor, inductor, LVDT and capacitor transducers – LVDT Applications – Strain gauge and its principle of operation – Gauge factor – Thermistors – Thermocouples – Synchros – Piezoelectric transducers – Photo diodes.

UNIT-III : Measurement of Non-Electrical Quantities

Measurement of strain – Gauge Sensitivity – Displacement – Velocity – Angular Velocity – Acceleration – Force – Torque – Measurement of Temperature, Pressure, Vacuum, Flow rate, Liquid level.

UNIT-IV : Oscilloscopes

Cathode ray oscilloscope – Time base generator – Horizontal and vertical amplifiers – Measurement of phase and frequency – Lissajous patterns – Digital Storage Oscilloscope- Sampling – Analog and digital type data loggers.

UNIT-V: Signal Analyzers

Wave Analyzers – Frequency selective analyzers – Heterodyne – Application of Wave analyzers – Harmonic Analyzers – Total Harmonic distortion – Spectrum analyzers – Basic spectrum analyzers – Spectral displays – Vector impedance meter – Q meter- Peak reading and RMS voltmeters.

UNIT-VI: Sensors

Sensors Hall effect sensors, Eddy current sensors, Fiber-optic sensors – Voltage Sensor, Semiconductor sensors, Film sensors– Nano sensors, laser - acoustic - magnetic, fiber optic and tactile sensors.

L	T	P	C
3	1	0	3

Preamble:

Power quality is a major problem for utilities and customers. Customers using sensitive critical loads need quality power for proper operation of the electrical equipment. It is important for the student to learn the power quality issues and improvement measures provided by the utility companies. This course covers the topics on voltage and current imperfections, harmonics, voltage regulation, power factor improvement, distributed generation, power quality monitoring and measurement equipment.

Course Objectives:

This course enables the students to

- Learn different types of power quality phenomena.
- Identify sources for voltage sag, voltage swell, interruptions, transients, long duration over voltages and harmonics in a power system.
- Describe power quality terms and study power quality standards.
- Learn the principle of voltage regulation and power factor improvement methods.
- Explain the relationship between distributed generation and power quality.
- Understand the power quality monitoring concepts and the usage of measuring instruments.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Identify the different problems related to power quality.	Applying
CO2	Explore the power quality terms as per IEEE and IEC standards.	Analyzing
CO3	Analyze over voltage protection and voltage regulation with improvement devices.	Analyzing
CO4	Apply different solutions for harmonic distortion with effect on power factor.	Applying
CO5	Demonstrate the distribution generator with power quality issues.	Applying
CO6	Examine the different instruments used to power quality measurements as per standards	Analyzing

Mapping of COs with POs and PSOs

[illegible]

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

UNIT-I: Introduction

Overview of power quality – Concern about the power quality – General classes of power quality and voltage quality problems – Transients – Long-duration voltage variations – Short-duration voltage variations – Voltage unbalance – Waveform distortion – Voltage fluctuation – Power frequency variations.

UNIT-II: Voltage imperfections in power systems

Power quality terms – Voltage sags – Voltage swells and interruptions – Sources of voltage sag, swell and interruptions – Nonlinear loads – IEEE and IEC standards. Source of transient over voltages – Principles of over voltage protection – Devices for over voltage protection – Utility capacitor switching transients.

UNIT-III: Voltage Regulation and power factor improvement:

Principles of regulating the voltage – Device for voltage regulation – Utility voltage regulator application – Capacitor for voltage regulation – End-user capacitor application – Regulating utility voltage with distributed resources – Flicker – Power factor penalty – Static VAR compensations for power factor improvement.

UNIT- IV : Harmonic distortion and solutions

Voltage distortion, Current distortion – Harmonics vs Transients – Harmonic indices – Sources of harmonics – Effect of harmonic distortion – Impact of capacitors, transformers, motors and meters – Point of common coupling – Passive and active filtering.

UNIT-V: Distributed Generation and Power Quality

Resurgence of distributed generation – DG technologies – Interface to the utility system – Power quality issues and operating conflicts – DG on low voltage distribution networks.

UNIT-VI : Monitoring and Instrumentation

Power quality monitoring and considerations – Historical perspective of PQ measuring instruments – PQ measurement equipment – Assessment of PQ measuring data – Application of intelligent systems – PQ monitoring standards.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – I: Permanent magnet materials and PMDC motors

Introduction-classification of permanent magnet materials used in electrical machines-minor hysteresis loop and recoil line-Stator frames of conventional dc machines-Development of electronically commutated dc motor from conventional dc motor-Permanent-magnet materials and characteristics- B-H loop and demagnetization characteristics - Temperature effects: reversible and irreversible losses-high temperature effects-reversible losses-Irreversible losses recoverable by magnetization-Mechanical properties, handling and magnetization – Applications of PMDC motors.

UNIT-II: Stepper Motors

Classification of stepper motors – Hybrid and Variable Reluctance Motor (VRM) -Construction and principle of hybrid type synchronous stepper motor – Different configuration for switching the phase windings control circuits for stepper motors – Open loop and closed loop control of 2-phase hybrid stepping motor. Construction and principle of operation of Variable Reluctance Motor (VRM) – Single stack and multiple stack – Open loop control of 3- phase VR Stepper Motor- Applications.

UNIT – III: Switched Reluctance Motors

Construction – Comparison of conventional and switched reluctance motors – Design of stator and rotor pole arcs – Torque producing principle and torque expression –Different converter configurations for SRM – Drive and power circuits for SRM – Position sensing of rotor – Applications of SRM.

UNIT – IV: Square Wave Permanent Magnet Brushless DC Motor

Types of constructions – Surface mounted and interior type permanent magnet – Principle of operation of BLDC motor. Torque and EMF equations – Torque speed characteristics – Performance and efficiency-Square wave brushless motors with 120°and 180° magnetic areas commutation.

UNIT –V: Sine wave Permanent Magnet Brushless Motor

Torque and EMF equations – Phasor Diagram – Circle diagram – Torque/speed characteristics – Comparison between square wave and sine wave permanent magnet motors - Applications.

UNIT – VI: Linear Induction Motors (LIM)

Construction– principle of operation–Double sided LIM from rotating type Induction Motor –Schematic of LIM drive for traction – Development of one sided LIM with back iron equivalent circuit of LIM.

Text Books:

OPTIMIZATION TECHNIQUES
(for EEE)
(Elective – II)

Course Objectives:

Students will learn:

- Constraint functions in terms of design variables and its optimization.
- To state single variable and multi variable optimization problems, without and with constraints.
- To impart linear programming technique to an optimization problem.
- To study and explain nonlinear programming techniques.
- Evolutionary programming techniques.
- Principles of Swarm Optimization methods.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Analyze the optimization problem in consideration with constraints.	Analyzing
CO2	Apply classical optimization techniques to minimize or maximize a multi-variable objective function.	Understanding
CO3	Analyze a mathematical model and apply linear programming technique for optimal solutions.	Analyzing
CO4	Determine nonlinear programming for different cases.	Applying
CO5	Apply genetic algorithms for simple electrical problems.	Applying
CO6	Solve practical problems using Swarm Optimization methods.	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	2	1	1	-	-	-	-	-	-	-	-	1	1
CO2	1	1	1	1	-	-	-	-	-	-	-	-	1	1
CO3	1	1	1	1	-	-	-	-	-	-	-	-	1	1

CO5	1	1	1	1	-	-	-	-	-	-	-	-	1	1
CO6	1	1	2	1	-	-	-	-	-	-	-	-	1	1

UNIT – I:

Introduction and Classical Optimization Techniques: Statement of an Optimization problem – design vector – design constraints – constraint surface – objective function – objective function surfaces – classification of Optimization problems.

UNIT – II:

Classical Optimization Techniques Single variable Optimization – multi variable Optimization without constraints – necessary and sufficient conditions for minimum/maximum – multivariable Optimization with equality constraints. Solution by method of Lagrange multipliers – multivariable Optimization with inequality constraints – Kuhn – Tucker conditions.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – III:

Linear Programming Standard form of a linear programming problem – geometry of linear programming problems – definitions and theorems – solution of a system of linear simultaneous equations – pivotal reduction of a general system of equations – motivation to the simplex method – simplex algorithm – Duality in Linear Programming – Dual Simplex method.

UNIT – IV:

Nonlinear Programming: Unconstrained cases - One – dimensional minimization methods: Classification, Fibonacci method and Quadratic interpolation method - Univariate method, Powell’s method and steepest descent method. Constrained cases - Characteristics of a constrained problem, Classification, Basic approach of Penalty Function method; Basic approaches of Interior and Exterior penalty function methods. Introduction to convex Programming Problem.

UNIT – V:

Introduction to Evolutionary Methods: Evolutionary programming methods - Introduction to Genetic Algorithms (GA)– Control parameters –Number of generation, population size, selection, reproduction, crossover and mutation – Operator selection criteria – Simple mapping of objective function to fitness function – constraints – Genetic algorithm steps – Stopping criteria –Simple examples.

UNIT – VI:

Introduction to Swarm Intelligence Systems: Swarm intelligence programming methods - Basic Partial Swarm Optimization – Method – Characteristic features of PSO procedure of the global version – Parameters of PSO (Simple PSO algorithm – Operators selection criteria – Fitness function constraints) – Comparison with other evolutionary techniques – Engineering applications of PSO.

POWER SYSTEMS AND SIMULATION LAB (16EE7L10)

Course objectives:

This course enables the students to

- Impart the practical knowledge of functioning of various power system components and determination of various parameters and simulation LFC and Economic dispatch.
- Simulate Boost converter, Buck converter.
- Simulate lossy transmission line.
- Perform analysis of single machine connected to infinite bus (SMIB).

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Examine the sequence parameters of 3 phase transformers and alternators by direct and indirect methods.	Analyzing
CO2	Obtain the two-port parameters of transmission network and to calibrate the tong tester.	Understanding
CO3	Analyze and Simulate the model of lossy transmission line, transformer and its connected machine at transient condition.	Analyzing
CO4	Analyze the response of various power system components and determination of various parameters and simulation LFC and Economic dispatch.	Applying

Mapping of COs with POs and PSOs

CO3	3	2	1	1	2	-	-	-	1	-	1	2	2	1
CO4	3	2	1	1	2	-	-	-	1	-	1	2	2	1

ANY FIVE EXPERIMENTS ARE TO BE CONDUCTED FROM EACH PART

PART – A: Hardware Based

1. Sequence impedances of 3 phase Transformer.
2. Sequence impedances of 3 phase Alternator by Fault Analysis.
3. Sequence impedances of 3 phase Alternator by Direct method.
4. ABCD parameters of Transmission network.
5. Dielectric strength of Transformer oil.
6. Calibration of Tong Tester

PART – B: Simulation Based (using MATLAB)

1. Transient analysis of single machine connected to infinite bus (SMIB).
2. Modeling of transformer and simulation of lossy transmission line.
3. Load frequency control with and without control
4. Economic load dispatch with & without losses.
5. Load flow studies using Gauss-seidel method
6. Load flow studies using N-R method.

CO3	3	3	-	-	-	-	-	-	-	-	-	-	2	2

LIST OF EXPERIMENTS

PART- A:

8086 Assembly Language Programming using Assembler Directives

1. Sorting
2. Multibyte addition/subtraction
3. Sum of squares/cubes of a given n-numbers
4. Addition of n-BCD numbers
5. Factorial of given n-numbers
6. Multiplication and Division operations
7. Stack operations
8. BCD to Seven segment display codes

PART- B:

8086 Interfacing

1. Hardware/Software Interrupt Application
2. A/D Interface through Intel 8255
3. D/A Interface through Intel 8255
4. Keyboard and Display Interface through Intel 8279
5. Generation of waveforms using Intel 8253/8254

PART- C:

8051 Assembly Language Programs

1. Finding number of 1's and number of 0's in a given 8-bit number
2. Addition of even numbers from a given array
3. Ascending / Descending order
4. Average of n-numbers

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

PART-D: (Minimum of 3 Experiments has to be performed)

8051 Interfacing

1. Switches and LEDs
2. 7-Segment display (multiplexed)
3. Stepper Motor Interface
4. Traffic Light Controller

Equipment Required:

- a) Regulated Power supplies
- b) Analog/Digital Storage Oscilloscopes
- c) 8086 Microprocessor kits
- d) 8051 microcontroller kits
- e) ADC module
- f) DAC module
- g) Stepper motor module
- h) Keyboard module
- i) LED, 7-Segment Units
- j) Digital Multimeters
- k) ROM/RAM Interface module
- l) Bread Board etc.

DIGITAL CONTROL SYSTEMS (16EE8T24)

Preamble:

In recent years digital controllers have become popular due to their capability of accurately performing complex computations at high speeds and versatility in leading nonlinear control systems. In this context, this course focuses on the analysis and design of digital control systems.

Course Objectives:

This course enables the students to

- Understand the concepts of digital control systems and assemble various components associated with it.
- Study the theory of z-transformations and application for the mathematical analysis of digital control systems.
- Represent the discrete-time systems in state-space model and evaluation of state transition matrix.
- Examine the stability of the system using different tests.
- Study the conventional method of analyzing digital control systems in the w-plane.
- Study the design of state feedback control by “the pole placement method.”

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Apply the concept of sample and hold operation to digital systems.	Applying
CO2	Identify the Z-transforms to Digital systems.	Applying
CO3	Examine the performance of digital control systems with the concept of state space.	Analyzing
CO4	Examine the stability of digital control systems.	Analyzing
CO5	Analyze controllers to meet the desired performance by conventional methods.	Applying
CO6	Develop the controller by pole-placement technique for desired system behavior.	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	-	-	-	-	-	-	-	-	-	-	-	-	1
CO2	3	2	-	-	-	-	-	-	-	-	-	-	-	1
CO3	3	2	-	-	-	-	-	-	-	-	-	-	-	1
CO4	3	2	-	-	-	-	-	-	-	-	-	-	-	1
CO5	3	2	1	-	-	-	-	-	-	-	-	-	-	1
CO6	3	2	1	-	-	-	-	-	-	-	-	-	-	1

UNIT-I : Introduction and signal processing

Introduction to analog and digital control systems – Advantages of digital systems – Signals and processing – Sample and hold devices – Sampling theorem and data reconstruction – Frequency domain characteristics of zero order hold.

UNIT-II : Z-transformations

Z-Transforms – Theorems – Inverse z-transforms – Formulation of difference equations – Block diagram representation – Pulse transfer functions, open loop and closed loop responses.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-III : State space analysis and the concepts of Controllability and observability

State Space Representation of discrete time systems – State transition matrix and methods of evaluation – Discretization of continuous – Time state equations – Concepts of controllability and observability – Tests.

UNIT-IV : Stability analysis

Mapping between the S-Plane and the Z-Plane – Primary strips and Complementary Strips – Stability criterion – Modified routh's stability criterion and jury's stability test.

UNIT-V : Design of discrete-time control systems by conventional methods

Transient and steady state specifications – Design using frequency response in the ω -plane for lag and lead compensators – Root locus technique in the z- plane.

UNIT-VI : State feedback controllers:

Design of state feedback controller through pole placement – Necessary and sufficient conditions – Ackerman's formula.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – I : Basic Concepts of DC Transmission

Economics & Terminal equipment of HVDC transmission systems: Types of HVDC Links – Apparatus required for HVDC Systems – Comparison of AC&DC transmission – Application of DC Transmission System – Planning - Recent trends in DC transmission.

UNIT – II: Analysis of HVDC Converters

Choice of Converter configuration – Analysis of Graetz – Characteristics of 6-Pulse & 12-Pulse converters –3 phase converters – Y-Y & Y- Δ configurations - performance.

UNIT – III: Converter & HVDC System Control

Principle of DC Link Control – Converters Control Characteristics – Firing angle control –Current and extinction angle control – Effect of source inductance on the system – Starting and stopping of DC link - Power Control.

UNIT – IV: Reactive Power Control in HVDC

Reactive Power Requirements in steady state – Conventional and alternate control strategies -Sources of reactive power – AC Filters– Shunt capacitors – Synchronous condensers- Modeling of DC Links-DC Network-DC Converter-Controller Equations-Solution of DC load flow –solution of AC-DC Power flow-Simultaneous method-Sequential method.

UNIT – V: Converter Faults & Protection

Converter faults – protection against over current and over voltage in converter station – surge arresters – smoothing reactors – DC breakers –Audible noise-space charge field-corona effects on DC lines-Radio interference.

Harmonics

Generation of Harmonics – Characteristic harmonics – Non-Characteristic harmonics – Calculation of Harmonic components -Adverse effects of harmonics– Calculation of voltage & current harmonics – Effect of Pulse number on harmonics.

UNIT – VI: Filters

Types of AC filters, Design of Single tuned filters –Design of High pass filters.

ELECTRICAL DISTRIBUTION SYSTEMS (16EE8T26)

Preamble:

This subject deals with the general concept of distribution system and planning, substations and feeders as well as discusses distribution system analysis, protection and coordination, voltage control and power factor improvement.

Course Objectives:

This course enables the students to

- Learn different factors of Distribution system.
- Study and design the substations and distribution systems.
- Determination of voltage drop and power loss.
- Study the distribution system protection and its coordination.
- Understand the effect of compensation on P.F improvement.
- Study the effect of voltage control on distribution system.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Analyze the characteristics and components of electric power distribution systems and its planning.	Analyzing
CO2	Understand suitable layout and components for a sub-station	Understanding
CO3	Analyze the impact of economical factors on distribution systems	Analyzing
CO4	Compare the protective devices used in distribution system and their coordination.	Analyzing
CO5	Demonstrate reactive power control and Power factor improvements of the system.	Applying
CO6	Analyze the equipment used for voltage control in a distribution system.	Analyzing

Mapping of COs with POs and PSOs

CO2	3	2	2	-	-	-	2	-	-	-	-	-	1	1
CO3	3	3	2	-	-	-	1	-	-	-	-	-	-	-
CO4	3	3	1	-	-	-	-	-	-	-	-	-	-	-
CO5	3	3	2	-	-	2	-	-	-	-	-	-	1	1
CO6	3	3	2	-	-	-	-	-	-	-	-	-	-	1

UNIT-I: General Concepts

Introduction to Distribution systems–Load modeling and characteristics - Coincidence factor – Contribution factor loss factor – Relationship between the load factor and loss factor – Classification of loads (Residential, commercial, Agricultural and Industrial) and their characteristics.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-II: Substations

Location of substations: Rating of distribution substation – Service area with ‘n’ primary feeders – Benefits and methods of optimal location of substations.

Distribution Feeders

Design Considerations of distribution feeders: Radial and loop types of primary feeders – Voltage levels – Feeder loading – Basic design practice of the secondary distribution system.

UNIT-III: System Analysis

Voltage drop and power-loss calculations: Derivation for voltage drop and power loss in lines- Uniformly distributed loads and non-uniformly distributed loads – Three phase balanced primary lines.

UNIT-IV: Protection

Objectives of distribution system protection – Types of common faults and procedure for fault calculations – Protective devices: Principle of operation of fuses – Circuit reclosures – Line sectionalizers and circuit breakers. Coordination of protective devices: General coordination procedure – Various types of co-ordinated operation of protective devices- Residual current circuit breaker (RCCB)

UNIT-V: Compensation for Power Factor Improvement

Capacitive compensation for power-factor control – Different types of power capacitors – shunt and series capacitors – Effect of shunt capacitors (Fixed and switched) – Power factor correction – Capacitor allocation – Economic justification – Procedure to determine the best capacitor location

UNIT-VI: Voltage Control

Voltage Control: Equipment for voltage control – Effect of series capacitors– Effect of AVB/AVR –Line drop compensation

HIGH VOLTAGE ENGINEERING (16EE8D07)

(Elective-III)

Preamble:

High Voltage Engineering is the foremost pre-requisite course for most of the subjects in Electrical Engineering. To meet the demand of the electricity, this subject plays a vital key role in the power engineering. This course introduces the development of the theory for generation and measurement of High Voltage.

Course Objectives:

This course enables the students to

- Study the electric field distribution and computation in different configuration of electrode systems.
- Understand the HV breakdown phenomena in gases, liquids and solids dielectric materials.
- Understand the operating principles of HVDC, AC & Impulse voltages and currents.
- Study the various techniques in measurement of HVDC, AC & Impulse voltages and currents.
- Learn the insulating characteristics of dielectric materials.
- Study the various techniques of HV equipments for testing.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Measure the performance of high voltages with regard to different configurations of electrode systems.	Applying
CO2	Analyze the theory of breakdown and withstand phenomena of all types of dielectric materials.	Analyzing
CO3	Differentiate the operating principles of HVDC, AC & Impulse voltages and currents.	Analyzing
CO4	Understand the various techniques in measurement of HVDC, AC & Impulse voltages and currents	Understanding
CO5	Compare dielectric property of material used for HV equipment.	Analyzing
CO6	Identify the techniques of testing various equipment's used in HV engineering	Applying

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2	2	1	-	-	-	-	-	-	-	-	-	1
CO2	3	2	2	1	-	-	-	-	-	-	-	-	-	1
CO3	3	3	2	1	-	-	-	-	-	-	-	-	-	1
CO4	3	3	1	-	-	-	-	-	-	-	-	-	-	1
CO5	3	3	2	1	-	-	-	-	-	-	-	-	-	1
CO6	3	3	2	-	-	-	-	-	-	-	-	-	-	1

UNIT – I Introduction to High Voltage Technology:

Electric Field Stress – Uniform and non-uniform field configuration of electrodes – Estimation and control of electric Stress – Numerical methods for electric field computation.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT – II Break down phenomenon in gaseous, liquid and solid insulation:

Gases as insulating media – Collision process – Ionization process – Townsend's criteria of breakdown in gases – Paschen's law – Liquid as Insulator – Pure and commercial liquids – Breakdown in pure and commercial liquid – Intrinsic breakdown – Electromechanical breakdown – Thermal breakdown – Breakdown of solid dielectrics in practice – Breakdown in composite dielectrics used in practice.

UNIT – III Generation of High voltages and High currents:

Generation of DC and AC high voltages–impulse voltages –impulse currents –switching voltages.

UNIT – IV Measurement of high voltages and High currents:

Measurement of high DC, AC and Impulse voltages –Measurement of high currents- DC, AC and Impulse.

UNIT – V Non-destructive testing of material and electrical apparatus:

Measurement of DC resistivity – Measurement of dielectric constant and loss factor – Partial discharge measurements.

UNIT – VI High voltage testing of electrical apparatus:

Testing of insulators and bushings – Testing of isolators and circuit breakers – Testing of cables – Testing of transformers – Testing of surge arresters- Radio Interference measurements.

Text Books:

1. High Voltage Engineering by M.S.Naidu and V. Kamaraju – TMH Publications, 3rd Edition.
2. High Voltage Engineering : Fundamentals by E.Kuffel, W.S. Zaengl, J. Kuffel by Elsevier, 2nd Edition.

PRAGATI ENGINEERING COLLEGE : SURAMPALEM

(Autonomous)

Unit-I : Introduction to FACTS

Power flow in an AC System – Loading capability limits – Dynamic stability considerations – Importance of controllable parameters – Basic types of FACTS controllers – Benefits from FACTS controllers – Requirements and characteristics of high power devices – Voltage and current rating – Losses and speed of switching – Parameter trade-off devices.

Unit-II : Voltage source and Current source converters

Concept of voltage source converter(VSC) – Single phase bridge converter – Square-wave voltage harmonics for a single-phase bridge converter – Three-phase full wave bridge converter– Three-phase current source converter – Comparison of current source converter with voltage source converter.

Unit-III : Shunt Compensators-1

Objectives of shunt compensation – Mid-point voltage regulation for line segmentation – End of line voltage support to prevent voltage instability – Improvement of transient stability – Power oscillation damping.

Unit-IV : Shunt Compensators-2

Thyristor Switched Capacitor (TSC), Thyristor controlled reactor (TCR), TSC-TCR, FC-TCR, SVC, STATCOM- Regulation slope, transfer function and dynamic performance – Transient stability enhancement and power oscillation damping– Operating point control and summary of compensation control.

Unit V : Series Compensators

Static series compensators: Concept of series capacitive compensation – Improvement of transient stability – Power oscillation damping – Functional requirements. GTO thyristor controlled Series Capacitor (GSC) – Thyristor Switched Series Capacitor (TSSC) and Thyristor Controlled Series Capacitor (TCSC).

Unit-VI : Combined Controllers

Schematic and basic operating principles of Unified Power Flow Controller (UPFC) – Application on transmission lines.

POWER SYSTEM DEREGULATION (16EE8D09)
(Elective-III)

Preamble:

This course introduces the concepts and issues of power system reforms and aims at computation of Available Transfer Capability (ATC), Congestion Management, Electricity Pricing, Ancillary services Management and Power system operation in competitive Environment.

Course Objectives:

This course enables the students to

- Understand the fundamentals of power system deregulation and restructuring.
- Study available transfer capability.
- Get Knowledge on congestion management
- Study various electricity pricing methods.
- Understand the operation of power system in deregulated environment.
- Study the importance of Ancillary services management.

COURSE OUTCOMES : By the end of the Course, the Student will be able to:

CO	Description	BLOOMS TAXONOMY LEVEL
CO1	Understand the power system deregulation and restructuring.	Understanding
CO2	Examine the different methods of transfer capability.	Analyzing
CO3	Explain the transmission congestion management.	Understanding
CO4	Calculate the electricity pricing in deregulated environment.	Applying
CO5	Develop the power system operation in deregulated environment.	Applying
CO6	Identify the importance of ancillary services	Understanding

Mapping of COs with POs and PSOs

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1	2	1	-	-	-	-	-	-	-	-	1	1
CO2	2	1	2	1	-	-	-	-	-	-	-	-	1	1
CO3	2	1	2	1	-	-	-	-	-	-	-	-	1	1
CO4	2	1	1	1	-	-	-	-	-	-	-	-	1	1
CO5	2	1	2	1	-	-	-	-	-	-	-	-	1	1
CO6	2	1	2	1	-	-	-	-	-	-	-	-	1	1

UNIT-I : Over View of Key Issues in Electric Utilities

Introduction –Restructuring models–Independent system operator(ISO)– Power Exchange –Market operations–Market Power–Standard cost– Transmission Pricing – Congestion Pricing – Management of Inter zonal/Intrazonal Congestion. Difference between integrated power system and restructured power system

PRAGATI ENGINEERING COLLEGE : SURAMPALEM
(Autonomous)

UNIT-II : Oasis: Open Access Same–Time Information System

Structure of OASIS –Processing of Information–Transfer capability on OASIS–Definitions Transfer Capability Issues–ATC–TTC–TRM– CBM calculations– Methodologies to calculate ATC.

UNIT-III: Congestion Management

Introduction to congestion management–Methods to relieve congestion- Bid, Zonal and Node Congestion Principles

UNIT-IV :Electricity Pricing

Introduction–Electricity price volatility electricity price indexes– Challenges to electricity pricing– Construction of forward price curves– Short–time price forecasting.

UNIT-V : Power System Operation in Competitive Environment

Introduction –Operational planning activities of ISO–The ISO in pool markets–The ISO in bilateral markets–Operational planning activities of a GENCO.

UNIT-VI : Ancillary Services Management

Introduction – Reactive power as an ancillary service – A review – Synchronous generators as ancillary service providers.
