### Resource person details

**Name:** SATYA MOHAN CHOWDARY G

**Designation:** ASSISTANT PROFESSOR, DEPARTMENT OF IT

Mail ID: [satyamohan.g@pragati.ac.in](mailto:satyamohan.g@pragati.ac.in)

On Day 1 discussed about Basics of DevOps with related technologies. DevOps promotes collaboration between Development and Operations team to deploy code to production faster in an automated & repeatable way. DevOps can also be defined as a sequence of development and IT operations with better communication and collaboration.

DevOps has become one of the most valuable business disciplines for enterprises or organizations. With the help of DevOps, quality, and speed of the application delivery has improved to a great extent.

On Day 2 discussed about Installation and configuration of Jenkins to test and deploy Java or Web Applications using Netbeans or Eclipse. agile developers began to embrace and promote test-driven development and continuous integration (CI). With these techniques we could automatically build source code whenever a developer checked it into a source repository, executing an exhaustive unit test suite to ensure that an application was working properly. Many test-driven developers also started doing integration testing and performance testing in a secondary CI process.

With continuous integration we could detect errors more quickly and release code much faster than we had done in previous years. It's no exaggeration to say that CI tamed the "build" side of the build-and-deploy cycle. These days many dev teams have moved beyond CI to CD, which stands for either continuous delivery or continuous deployment. Resource person begin with an overview of the CI and CD process, then setup a Java web project using Maven and Jenkins.

On Day 3 discussed about Hands-on version control tools like GIT. One of the most beautiful pieces of software we generally ever used is git. Git's revolutionary branching functionality will boost our productivity by enabling us to work on numerous projects at once. We require more than just command-line knowledge to effectively utilise Git's capability.

Although Git is not a programming language, it has grown to be crucial for programmers who use practically every language you can think of. Git has become the industry norm for version control software today. Version control is a tool used by programmers to track changes made to big codebases, go back in time if necessary, and check who made what changes. It is a key component of GitOps, which applies the agile devops paradigm to container-based systems, and it has become an essential component of agile software development.

On Day 4 discussed about Installation and configuration of Docker for creating containers of different OS images. Whenever an application needs to be deployed to Production, the required hardware machines need to be procured and all the necessary installations and set-up done. Procuring different hardware machines for different applications increased the maintenance cost and labour. So, they came up with something called Virtualization.

It is a technique of creating a Guest Operating System on top of a Host Operating System. For instance, if I built an application that needs Ubuntu OS System (Guest) to run but they have Windows OS(Host), all we need to do is install a Virtual Machine(VM) which can Host Ubuntu OS. Similarly, we can install multiple VM's to run different Operating Systems based on the capacity of my Host OS.

This method eliminates the need for separate hardware machines to run different applications written in different languages and have various dependencies.

On Day 5 discussed about Building, deployment and management of web or java application on Docker.

A sample project is developed based on a sample Java Spring application available on GitHub.

On Day 6 discussed about Installation and configuration of software configuration and provisioning using chef. The process of automating server provisioning using Chef, a powerful configuration management tool that leverages the Ruby programming language to automate infrastructure administration and provisioning.

They started by having a look at the terminology used by Chef, followed by an overview of the main language features that can be used to write recipes.

On Day 1 discussed about Introduction to MongoDB, Features of MongoDB.

A record in MongoDB is a document, which is a data structure composed of field and value pairs. MongoDB documents are similar to JSON objects. The values of fields may include other documents, arrays, and arrays of documents.

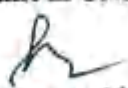

MongoDB is a scalable, flexible NoSQL document database platform designed to overcome the relational databases approach and the limitations of other NoSQL solutions. MongoDB is well known for its horizontal scaling and load balancing capabilities, which has given application developers an unprecedented level of flexibility and scalability.

MongoDB Atlas is the leading global cloud database service for modern applications. Using Atlas, developers can deploy fully managed cloud databases across AWS, Azure, or Google Cloud.

On Day 2 discussed about MongoDB Datatypes, Data Modeling in MongoDB

MongoDB supports many datatypes. Some of them are –

- **String** – This is the most commonly used datatype to store the data. String in MongoDB must be UTF-8 valid.
- **Integer** – This type is used to store a numerical value. Integer can be 32 bit or 64 bit depending upon your server.
- **Boolean** – This type is used to store a boolean (true/ false) value.
- **Double** – This type is used to store floating point values.
- **Min/ Max keys** – This type is used to compare a value against the lowest and highest BSON elements.
- **Arrays** – This type is used to store arrays or list or multiple values into one key.
- **Timestamp** – timestamp. This can be handy for recording when a document has been modified or added.
- **Object** – This datatype is used for embedded documents.
- **Null** – This type is used to store a Null value.
- **Symbol** – This datatype is used identically to a string; however, it's generally reserved for languages that use a specific symbol type.
- **Date** – This datatype is used to store the current date or time in UNIX time format. You

- can specify your own date time by creating object of Date and passing day, month, year into it.
- **Object ID** - This datatype is used to store the document's ID.
- **Binary data** - This datatype is used to store binary data.
- **Code** - This datatype is used to store JavaScript code into the document.
- **Regular expression** - This datatype is used to store regular expression.

The key challenge in data modeling is balancing the needs of the application, the performance characteristics of the database engine, and the data retrieval patterns. When designing data models, always consider the application usage of the data (i.e. queries, updates, and processing of the data) as well as the inherent structure of the data itself.

On Day 3 discussed about MongoDB Operators, MongoDB Database commands.

There are many query operators that can be used to compare and reference document fields.

## Comparison

The following operators can be used in queries to compare values:

- **\$eq**: Values are equal
- **\$ne**: Values are not equal
- **\$gt**: Value is greater than another value
- **\$gte**: Value is greater than or equal to another value
- **\$lt**: Value is less than another value
- **\$lte**: Value is less than or equal to another value
- **\$in**: Value is matched within an array

## Logical

The following operators can logically compare multiple queries.

- **\$and**: Returns documents where both queries match
- **\$or**: Returns documents where either query matches
- **\$nor**: Returns documents where both queries fail to match
- **\$not**: Returns documents where the query does not match

Collection commands, Database commands, Row commands were also discussed.

On Day 4 discussed about MongoDB Shell, MongoDB Tools

The **mongo** shell is an interactive JavaScript interface to MongoDB. You can use the **mongo** shell to query and update data as well as perform administrative operations.

**Database tools** is a collective term for tools, utilities, and assistants that can make life easier when performing database administration tasks.

While not necessary to use, database tools and utilities can save you time and effort. MongoDB has a first party collection of extremely helpful, good to know command-line

utilities that you can use in your deployment. In this article we are going to briefly mention installation and then cover the most useful utilities to know.

MongoDB separates its tools and utilities into four categories: Binary Import / Export, Data Import / Export, Diagnostic Tools, and GridFS so we'll cover them accordingly.

On Day 5 discussed about Advanced Indexing, MongoDB - Indexing Limitations, Java MongoDB Connectivity

Indexes in any database are essential in improving the performance of their data retrieval speed, and the same is true for MongoDB. By using indexes, performance in MongoDB queries becomes more efficient. Here student learnt about the different indexing techniques and their limitations.

Before starting using MongoDB in Java programs, we need to make sure that we have MongoDB CLIENT and Java set up on the machine. we need to download the jar mongodb-driver-3.11.2.jar and its dependency mongodb-driver-core-3.11.2.jar.

You can connect to and communicate with MongoDB using the `MongoClient` class.

Use the `MongoClients.create()` method to construct a `MongoClient`. As each `MongoClient` represents a thread-safe pool of connections to the database, most applications only require a single instance of a `MongoClient`, even across multiple threads.

All resource usage limits, such as max connections, apply to individual `MongoClient` instances.

On Day 6 discussed about MongoDB - ObjectID, MongoDB Cloud Manager, MongoDB Ops Manager

Cloud Manager is managed software-as-a-service where you only have to install relevant agents (monitoring, automation, or backup) in your infrastructure. Ops Manager is on-premise software that is part of an Enterprise subscription: you have to install and manage all services on your own infrastructure.

## ADVANCED MACHINING PROCESSES

**PROF. MANAS DAS**

Department of Mechanical Engineering  
IIT Guwahati

**TYPE OF COURSE** : Rerun / Elective / UG / PG

**COURSE DURATION** : 8 weeks (23 Aug' 21 - 15 Oct' 21)

**EXAM DATE** : 24 Oct 2021

**INTENDED AUDIENCE** : Intended for UG and PG students who plan to take up this subject as their future research area. Also, for practitioner in industries who want to implement new development technologies in advanced machining to their factory.

**INDUSTRIES APPLICABLE TO** : Bharat Heavy Electricals Limited (BHEL), Hindustan Aeronautics Limited (HAL), Defense Research and Development Organization (DRDO), Die manufacturing industries, Automobile industries, Machine Tool industries, Precision medical equipment manufacturing industries, High precision optics and semiconductor industries

### COURSE OUTLINE :

There is a need for machine tools and processes which can accurately and easily machine the most difficult-to-machine materials and workpieces with intricate and accurate shapes. In order to meet these challenges, a number of newer material removal processes have now been developed to the level of commercial utilization. These newer methods are also called unconventional in the sense that conventional tools are not employed for metal cutting. Instead, energy in its direct form is used to remove the material from the workpiece. This course aims at bringing the students up-to-date with the latest technological developments and research trends in the field of unconventional / nontraditional / modern machining processes.

### ABOUT INSTRUCTOR :

Prof. Manas Das is an Assistant Professor in the Department of Mechanical Engineering, Indian Institute of Technology Guwahati, India since 2012. He received his Masters and Ph.D. degree from Mechanical Engineering Department, IIT Kanpur. His research areas include Advanced Finishing and Nano-finishing Processes, Magnetorheological Finishing (MRF) Process, Advanced/Non-traditional Machining Processes, Micromachining processes. Dr. Das has published more than 20 papers in reputed journal and conferences. He has also written 2 book chapters in the area of surface finishing. Presently, he is supervising 5 Ph.D. students in the broad area of manufacturing.

### COURSE PLAN :

# INSPECTION AND QUALITY CONTROL IN MANUFACTURING

**PROF. KAUSHIK PAL**

Department of Mechanical Engineering  
IIT Roorkee

**TYPE OF COURSE** : Refun I Elective I UG/PG

**COURSE DURATION** : 4 weeks (15 Feb' 21 - 12 Mar' 21)

**EXAM DATE** : 24 Apr 2021

**PRE-REQUISITES** : None

**INTENDED AUDIENCE** : UG & PG students of Mechanical Engg., Automobile Engg., Welding Engg., Metallurgy, Chemical Engg., Aerospace Engg., Material Science, Manufacturing and Production Engg. etc. R&D personals in industries.

**INDUSTRIES APPLICABLE TO** : Manufacturing based Industries: TATA Motors, ISRO, DRDO, Railways, BHEL, IOCL, Bharat Forge, Larsen and Toubro, Mahindra & Mahindra, etc.

## COURSE OUTLINE :

In manufacturing, quality control is a process that ensures customers receive products free from defects and meet their requirements. Inspection and measurement is needed during production for quality control because of the inherent variability introduced by the machines, tools, raw materials, and human operators which causes variations in the different quality characteristics (length, diameter, thickness, tensile strength, surface finish etc.) of the product. Inspection and testing is very important in maintaining a certain quality level in the product during production. It helps to control the quality of products by fixing the sources of defects immediately after they are detected. Several non-destructive inspection methods also help to perform in-service inspection to avoid any catastrophic failure and predict the remaining life of the product.

## ABOUT INSTRUCTOR :

Prof. Kaushik Pal is an Associate Professor in Department of Mechanical and Industrial Engineering, IIT Roorkee since 2012. He has obtained his Ph.D Degree (2009) from IIT, Kharagpur and then joined in Gyeongsang National University, South Korea for pursuing Post-Doc research. His fields of interests are surface modification of nano-materials and use of such materials in different electronic, mechanical and bio-medical applications. Currently, he is acting as reviewer of several internationally known journals and an active member of National Academy of Sciences, American Chemical Society (ACS) and Royal Society of Chemistry (RSC). Also, he is the recipient of Brain Korea (BK-21) fellowship award and DAAD fellowship award.

## COURSE PLAN :

## Inspection and Quality Control in Manufacturing

### COURSE OUTLINE

In manufacturing, quality control is a process that ensures customers receive products free from defects and meet their requirements. Inspection and measurement is needed during production for quality control because of the inherent variability introduced by the machines, tools, raw materials, and human operators which causes variations in the different quality characteristics (length, diameter, thickness, tensile strength, surface finish etc.) of the product. Inspection and testing is very important in maintaining a certain quality level in the product during production. It helps to control the quality of products by fixing the sources of defects immediately after they are detected. Several non-destructive inspection methods also help to perform in-service inspection to avoid any catastrophic failure and predict the remaining life of the product.

### TOPICS COVERED

Week 1 : Introduction, Fundamental Concept of Quality, Role of Inspection and Measurement for Quality Control in Manufacturing, Need of Inspection, Inspection types and Principles, Design for Inspection, Destructive Inspection, Testing of Composite Materials

Week 2 : Non-destructive Inspection-I: Visual Inspection, Dye Penetrant Inspection, Magnetic Particle Inspection, Eddy Current Inspection, Ultrasonic Testing

Week 3 : Non-destructive Inspection-II: Acoustic Emission Inspection, Radiography, Leak Testing, Thermographic Non-destructive Testing, Advanced, Non-destructive Techniques, NDT Standards, Safety in NDT

Week 4 : Engineering Metrology: Linear Measurement, Angular Measurement, Measurement of Surface Finish, Screw Thread Metrology, Gear Measurement, Miscellaneous Measurements

## ELECTRONICS AND COMMUNICATION ENGINEERING DEPARTMENT

A.Y: 2020-21

### An Introduction to Coding Theory

#### COURSE OUTLINE

Error control coding is an indispensable part of any digital communication system. In this introductory course, we will discuss theory of linear block codes and convolutional codes, their encoding and decoding techniques as well as their applications in real world scenarios. Starting from simple repetition codes, we will discuss among other codes: Hamming codes, Reed Muller codes, low density parity check codes, and turbo codes. We will also study how from simple codes by concatenation we can build more powerful error correcting codes.

#### TOPICS COVERED

Week 1: Introduction to error control coding

Week 2: Decoding of linear block codes

**INTENDED AUDIENCE :** Students in any branch of mathematics/science/engineering, 1st year

**PRE-REQUISITES :** School level mathematics.

**INDUSTRIES APPLICABLE TO :** This course should be of value to any company requiring programming skills.

**COURSE OUTLINE:**

This course is an introduction to programming and problem solving in Python. It does not assume any prior knowledge of programming. Using some motivating examples, the course quickly builds up basic concepts such as conditionals, loops, functions, lists, strings and tuples. It goes on to cover searching and sorting algorithms, dynamic programming and backtracking, as well as topics such as exception handling and using files. As far as data structures are concerned, the course covers Python dictionaries as well as classes and objects for defining user defined datatypes such as linked lists and binary search trees.

**ABOUT INSTRUCTOR:**

Prof. Madhavan Mukund studied at IIT Bombay (BTech) and Aarhus University (PhD). He has been a faculty member at Chennai Mathematical Institute since 1992, where he is presently Professor and Director. His main research area is formal verification. He has active research collaborations within and outside India and serves on international conference programme committees and editorial boards of journals. He has served as President of both the Indian Association for Research in Computing Science (IARCS) (2011-2017) and the ACM India Council (2016-2018). He has been the National Coordinator of the Indian Computing Olympiad since 2002. He served as the Executive Director of the International Olympiad in Informatics from 2011-2014. In addition to the NPTEL MOOC programme, he has been involved in organizing IARCS Instructional Courses for college teachers. He is a member of ACM India's Education Committee. He has contributed lectures on algorithms to the Massively Empowered Classroom (MEC) project of Microsoft Research and the QEEE programme of MHRD.
