PRAGATI ENGINEERING COLLEGE

(AUTONOMOUS)
DEPARTMENT OF INFORMATION TECHNOLOGY

Date: 19-08-2023

CIRCULAR

It is hereby informed to all the Students of II& III B.Tech. that "CLOUD COMPUTING" club of IT Department in association with Career Guidance cell organizing a seminar on "**CLOUD SECURITY**" on 18-08-2023. The students who are interested should register through the following link:

Registration link for the session:
https://forms.gle/9b3yLYw42HvXWqSz8
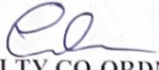

Mode: Offline

Time: 1 PM to 2.30 PM

Venue: Seminar Hall-1

FACULTY CO-ORDNATOR

The session **"CLOUD SECURITY"** was taught by Sri Sai Akshitha Manepalli (21A31A0595), Peddireddy Tejeswara Reddy (21A31A04B7) & B Akhil (21A31A1235).

Here are the pictures of our online meeting that we've conducted:-
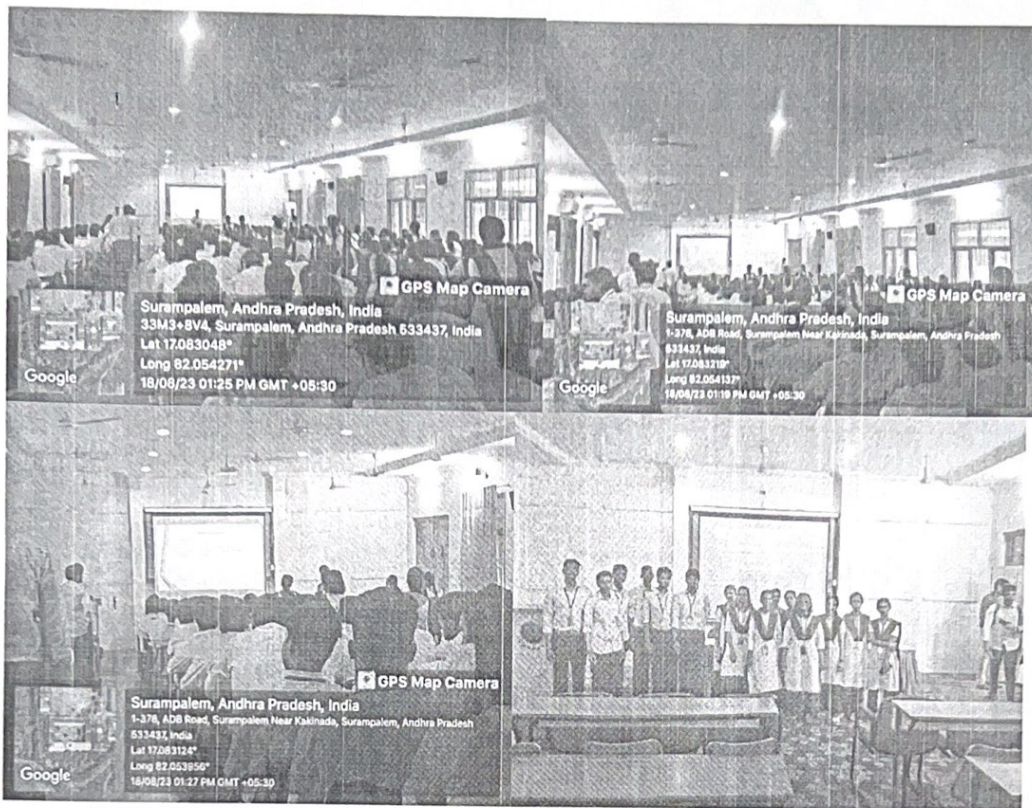

INTRODUCTION TO CLOUD SECURITY :

- In today's interconnected digital landscape, businesses and individuals are increasingly relying on cloud computing to streamline operations, enhance collaboration, and drive innovation. Cloud computing offers unparalleled flexibility, scalability, and convenience, enabling organizations to access resources and services on-demand. However, with this convenience comes a critical responsibility – safeguarding the data and applications that reside within the cloud.
- As organizations migrate their operations to the cloud, it's essential to understand the unique security challenges that arise and to implement robust strategies to mitigate potential risks.
- Cloud security refers to the practice of safeguarding data, applications, services, and infrastructure that are hosted in cloud computing environments. It encompasses a set of strategies, technologies, policies, and

procedures designed to protect cloud-based resources from unauthorized access, data breaches, data loss, and other security threats

CLOUD SECURITY IS ALL ABOUT :

1. **Data Protection:** Cloud security revolves around safeguarding sensitive information, ensuring data confidentiality, integrity, and availability.
2. **Shared Responsibility:** Both cloud providers and users share the responsibility for security, with providers managing infrastructure and users securing applications and data.
3. **Encryption:** Encryption is fundamental, ensuring data remains unreadable to unauthorized parties during storage and transmission.
4. **Access Control:** Robust identity and access management (IAM) ensures only authorized users can access resources and data.

PILLARS OF CLOUD SECURITY :

1. IDENTITY
2. ACCESS
3. VISIBILITY
4.

IDENTITY :

- The most crucial step in a data security plan is the evaluation of identity. In any governance system, understanding identity is essential to determine who gets access to what. For example, governments need to identify who is and who is not a citizen to accurately provide benefits afforded to nationals, such as voting. Data governance works in the same way. Data management is defined by who gets access to what data. Recognize identity correctly, and a large majority of data security challenges will be solved from the off

-

ACCESS :

- Once you have determined *who* needs access to data, the next step is to manage *what* data
- they can access. That requires granting privilege to your sensitive information- far and away the most challenging aspect of a data security strategy.
- For example, at the airport, TSA security determines *who* needs access to the terminals by identifying people with flight tickets. However, they also manage *what* terminal those people have the right to enter based on their flight information

VISIBILITY :

- With on-premises security, it is challenging to Survile the data environment because it is protected by a range of disparate technologies that are not inherently designed for unification. The beauty of cloud security is that its services are all seamlessly integrated.
- It has to visible for their respective owners
- For example In the Instagram some people have private accounts and those private accounts are only visible to the accounts which are followed back by this private accounts not to any others

CONCLUSION :

- We Have to Secure our Personal Data For to do not Attacked by the Hackers
- Aadhaar Card is not only our basic identity card it contains our Fingerprints,IRIS,Address,Phone number, and it contains every informatinon about us
- So we have protect those type of Informative things by using Strong security and etc…
