## TECHNOLOGY IN EDUCATION

9/10

- Technology is the most part in our lives. In the old days there was a letter to communicate each other. By growing day by day the technology was being changed more.
- Now a days the people were communicating early through by smart phones. By education in olden days there was no phone to attend in the room video call meetings. By developing the all new using technology we can communicate as we explain about studies any other through the world wide.
- Education is the most important in our life. By using technology now a days we can easily able to understand. day by day a new technology was developing by the people. By conducting online seminar, quiz and many other participations on education it was early communicate with others. These days the people were using more technology to implement their new ideas on their education. But the olden days people suffered a lot because there is no technology in that time. By after a long centuries growing the days up the technology was implemented in the world wide countries.

## TECHNOLOGY IN EDUCATION

Education has become the basic necessity as of basic needs. These days, education is becoming an integral part in our life. So, technology is playing a crucial role in making that education accessible to everyone. Education system has evolved tremendously by the growing technology.

Previously, education was only available in physical forms but with the increase in technology, we've been acquiring it through various platforms. Education is getting updated, the way it is being taught is updated, the way of approach has updated with the evolved technology.

One can be able to acquire knowledge from anyone in anytime to anywhere. This helps in achieving adequate knowledge. Large numbers of platforms, vast materials, huge courses are being provided. Some platforms are for free of cost which helps all classes of people to grasp knowledge irrespective of financial status.

Technology is not only making education accessible to everyone but is shaping everyone to understand the purpose: critical thinking (as it has enormous problems).

---

## Report:

- On 13<sup>th</sup> March 2024, SparkWIT club of Department of IT, Pragati Engineering college commemorated Essay writing competition on "Technology in Education".
- Educational technology is the combined use of computer hardware, software, and educational theory and practice to facilitate learning.
- The role of technology in education is immense. The learning process for the students becomes easier as the technology progresses. Technologies that are used in schools and colleges such as having computer labs, and using high-end devices and instruments make it easy for students to understand the concepts.
- The practical knowledge of the students improves when they see things happen. It becomes easy for them to relate the theory with practicals . There are also educational games that prepare young kids for school. Most of the concepts become when they see the animations and when their favorite cartoon characters are used. Technology is a boon in the educational system.
- Technology has a positive impact on student engagement, according to research. It can help educators create exciting, engaging and memorable lessons. Needless to say, higher engagement makes pupils more motivated and makes lessons more enjoyable for both students and teachers.
