A Tribute to Theoretical Physist Stephen Hawking on his 80th Birth Anniversary

(AT ECE DEPARTMENT IN ASSOCIATION WITH IETE STUDENT CHAPTER)
PROGRAMME SCHEDULE ON 07-01-2023

TIMINGS	COMPETITIONS
2:00AM – 2:00PM	Quiz (online mode)
10:00AM-11:00AM	Essay Writing
Topic:	Contribution towards Science and his Research
11:30AM-2:00PM	Articulation
Topic:	Concept of Penrose-Hawking's theorems, Black hole information Paradox

Venue: ECE Department, Pragati Engineering College

Stephen Hawkings:

Stephen Hawking, in full Stephen William Hawking, (born January 8, 1942, Oxford, Oxfordshire, England—died March 14, 2018, Cambridge, Cambridgeshire), English theoretical physicist whose theory of exploding black holes drew upon both relativity theory and quantum mechanics. He also worked with space-time singularities.

Hawking studied physics at University College, Oxford (B.A., 1962), and Trinity Hall, Cambridge (Ph.D., 1966). He was elected a research fellow at Gonville and Caius College at Cambridge. In the early 1960s Hawking contracted amyotrophic lateral sclerosis, an incurable degenerative neuromuscular disease. He continued to work despite the disease's progressively disabling effects. Hawking worked primarily in the field of general relativity and particularly on the physics of black holes.

[Stephen Hawking experiencing zero gravity](#)

In 1971 he suggested the formation, following the big bang, of numerous objects containing as much as one billion tons of mass but occupying only the space of a proton. These objects, called mini black holes, are unique in that their immense mass and gravity require that they be ruled by the laws of relativity, while their minute size requires that the laws of quantum mechanics apply to them also. In 1974 Hawking proposed that, in accordance with the predictions of quantum theory, black holes emit subatomic particles until they exhaust their energy and finally explode. Hawking's work greatly spurred efforts to theoretically delineate the properties of black holes, objects about which it was previously thought that nothing could be known. His work was also important because it showed these properties' relationship to the laws of classical thermodynamics and quantum mechanics.

Contribution Towards Science: In his research, he found that if this universe started with the Big Bang, then it would end with the Big Bang. He also explained Albert Einstein's theory of relativity. Using the General Theory of Relativity and Quantum Theory together, he gave us the concept of Hawking Radiation in which we came to know that Black Holes do not always exist, they leave the Hawking Radiation continuously. Hawking also explained the concept of Penrose– Hawking theorems, Blackhole information paradox, Micro black hole, Primordial black hole, Chronology protection conjecture, Soft hair (No hair theorem), Bekenstein–Hawking formula, Hawking energy, Hawking-Page phase transition.
