Data Centers vs Cloud Computing

- ❑ **Data Centre :** Data centers stores the data and gives the access to the clients to manage the data through internet.
- ❑ **Cloud Computing :** Although Cloud provides storage services, It also provides server maintenance, software deployment, networking and Pay-as-you-go services.

What is Cloud Computing ?

- ❑ Rather than the physical storage, we use internet to access the computing services like database storage, server maintenance, software availability and networking from the cloud is called cloud computing.

Cloud Computing

Why Cloud Developed ?

What is Cloud Computing ?

Data Centers vs Cloud

Cloud Service Models

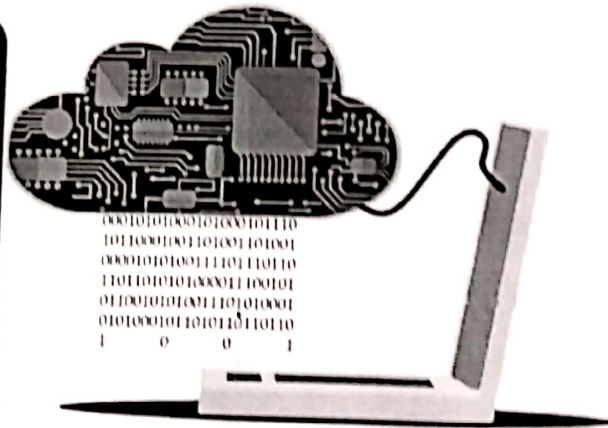

Cloud Deployment Models

Example Cloud providers

Why Cloud ?

Imagine you run a small business and need a website to showcase your products or services:

- You might need to purchase and set up a physical server to host your website. This involves hardware costs, maintenance, and expertise to manage the server.
- You'd have to estimate your server needs, potentially over-provisioning to handle peak times. This can lead to unused resources and wasted money.
