CONTENT DELIVERED IN EVENT:

Exploring innovation at the edge of artificial intelligence reveals some fascinating and cutting-edge developments. Here are several areas where AI is pushing the boundaries:

1. Generative AI

- **Text Generation:** Large language models like GPT-4 are creating human-like text, enabling advanced conversational agents, content creation, and automated writing.
- **Image and Video Generation:** AI tools like DALL-E and Stable Diffusion are generating high-quality images and even videos from textual descriptions, revolutionizing creative industries.
- **Music Composition:** AI systems are composing original music, blending genres, and creating new soundscapes.

2. AI in Robotics

- **Autonomous Robots:** Innovations in AI are enabling robots to perform complex tasks in unstructured environments, from manufacturing to household chores.
- **Swarm Robotics:** AI is being used to coordinate large groups of robots to perform tasks collectively, mimicking behaviors observed in nature.
- **Human-Robot Interaction:** Advanced AI is improving the ways robots understand and interact with humans, making them more intuitive and user-friendly.

3. Neuromorphic Computing

- **Brain-Inspired Architectures:** Neuromorphic computing aims to mimic the brain's architecture and functioning to create more efficient and powerful AI systems.
- **Energy Efficiency:** Neuromorphic chips are designed to be more energy-efficient, supporting AI applications in devices with limited power resources.

4. Explainable AI (XAI)

- **Transparency:** XAI focuses on making AI decision-making processes more transparent and understandable to humans, addressing the "black box" issue of traditional models.
- **Trust and Accountability:** By providing clear explanations of AI's decisions, XAI aims to build trust and ensure responsible use of AI technologies.

5. AI and Quantum Computing

- **Quantum Machine Learning:** Combining quantum computing with AI to solve complex problems faster and more efficiently than classical computers.

- **Optimization Problems:** Quantum algorithms have the potential to revolutionize optimization tasks, impacting industries like logistics and pharmaceuticals.

6. Synthetic Biology and AI

- **Genetic Engineering:** AI is being used to design and predict genetic modifications, advancing fields like synthetic biology and personalized medicine.
- **Biological Data Analysis:** AI systems are analyzing vast amounts of biological data, uncovering patterns and insights that drive innovation in drug discovery and genomics.

7. AI in Edge Computing

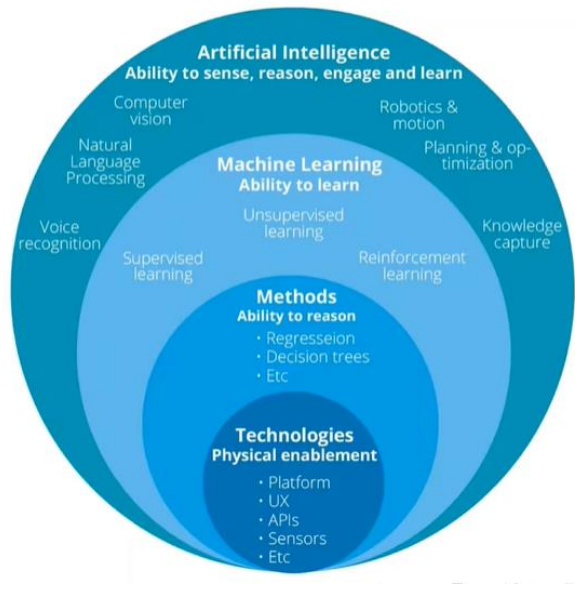

- **Real-Time Processing:** AI is being integrated into edge devices (e.g., smartphones, IoT devices) to enable real-time data processing and decision-making without relying on centralized cloud computing.
- **Privacy and Latency:** Edge AI helps address privacy concerns and reduce latency by processing data locally, enhancing user experience and security.

8. Ethics and AI Policy Innovation

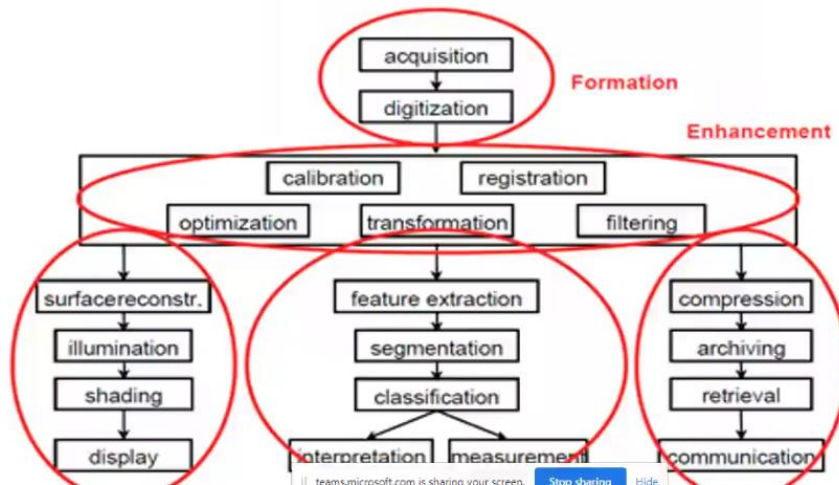

- **Ethical AI Frameworks:** Development of frameworks and guidelines to ensure ethical AI deployment, focusing on fairness, accountability, and transparency.
- **Global Collaboration:** International efforts to create standards and policies for AI development and use, promoting responsible innovation.

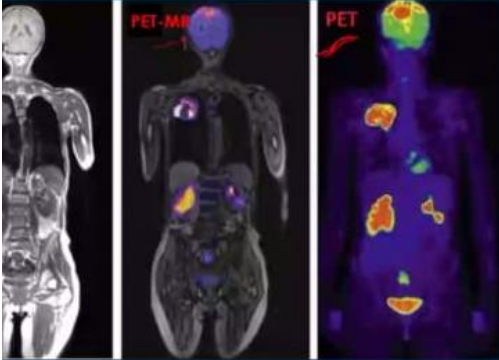

These innovations represent just a slice of the cutting-edge developments in AI. Each area is evolving rapidly, with ongoing research pushing the boundaries of what AI can achieve. If any of these topics particularly intrigue you, we can dive deeper into that area!

An Overview

Medical Image Processing

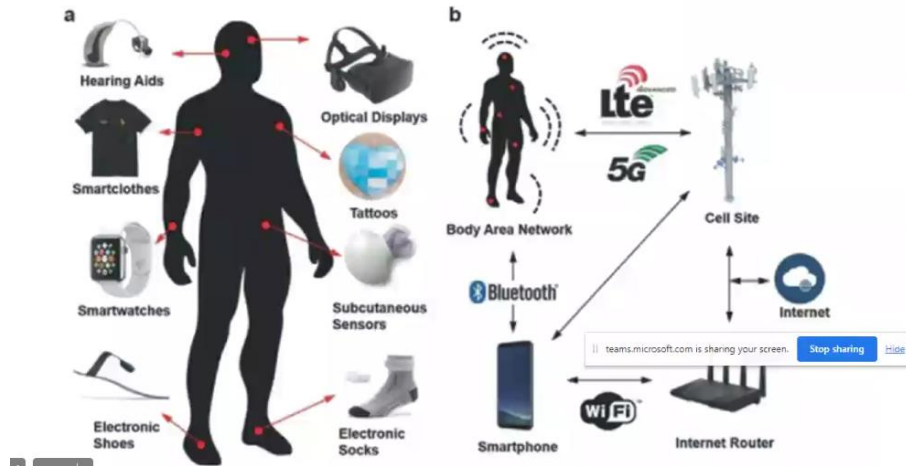

1. **X-ray:** Uses x-rays from a stationary source to create 2D image
2. **CT:** Uses x-rays in a circular source to create 3D Images in slices
3. **MRI:** Uses changes in magnetic fields to create 3D Images
4. **Ultrasound:** Uses sound waves to create 2D & 3D Images
5. **Nuclear Medicine:** Uses radiation from gamma ray emitting radiol isotopes injected into patient to generate 2D and 3D pictures
 - a) **Gamma Camera:** Generates 2D pictures
 - b) **Cardiac Cameras:** Specifically designed for generating 3D pictures of the heart
 - c) **SPECT:** Generates 3D pictures
6. **PET:** Uses radiation from positron emitting radiol isotopes injected into the patient to generate 3D pictures

Innovation at the Edge of Artificial intelligence

Speaker:-

Mr. Venkat Ramana Goud Kuna
IT Consultant, Global Knowledge Technologies

Date:- 16-07-2024, Timings:- 1:00 pm to 3:00 pm
@Seminar Hall - 1

Head of the Department
Dr. A. Radha Krishna
Faculty Coordinators
Mrs.L.Yamuna
Mrs.A.Srujana jyothi

Student Coordinators
B. Swathi Sri (22A31A4217)
