### REPORT

The **ENERGY MANAGEMENT CLUB** is an Association with **DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING** Conducted seminar presentation on **“ELECTRIC SHOCKS AND HAZARDS”**. The II Year students are actively participated in this seminar. The students were actively participated in this seminar. This Event was organized in Mechanical block.

By this event we discussed about electric shocks and how they are harm to human .

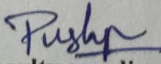

The precautions mostly we should fallow in rainy season are

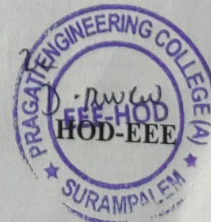

- Never Turn On or Off the Switches with Wet Hands. ...
- Prevent Dampness and Leakages of Water in the House. ...
- Shut Windows Near Plug Points When it Rains. ...
- Switch Off Electronic Devices During Thunderstorms. ...
- Switch Off the Gadgets During Power Fluctuations.

Electricity travels in closed circuits. Shock occurs when the body becomes a part of an electric circuit. Electric shock can cause direct injuries such as electrical burns, arc burns, and thermal contact burns. It can also cause injuries of an indirect or secondary nature in which involuntary muscle reaction from the electric shock can cause bruises, bone fractures, and even death resulting from collisions or falls. Shock occurs when person in contact with ground comes in contact with any of the following:

- Both wires of the electric circuit
- One wire of the energized circuit and the ground
- A metallic part that has become energized by being in contact with an energized wire.
