NEURAL NEWS-NEWS LETTER

JUN 2023-DEC 2023

VOL #3

FROM H.O.D'S DESK

The Vision of the CSE(AI&ML) Department :

To emerge as a center of technical expertise in the field of Computer Science and Engineering – Artificial Intelligence & Machine Learning by producing globally competent professionals with technical & research capabilities, ethical values and team spirit.

The Mission of the CSE (AI&ML) Department :

DM1: To produce competent software professionals in the field of AI.

DM2: To induce application oriented and research capabilities using Machine Learning in students for the betterment of society.

DM3: To inculcate ethics and human values in students to adapt to the dynamism in the field of computing technology.

Application of Grey Wolf Optimizer (GWO) strategy for Malware Analysis

Year : 2023 | Volume : 01 | Issue : 02 | Page : 43-53

By Manas Kumar Yogi¹, Yamuna Mundru²

1. Assistant Professor, Department of computer science and engineering, Pragati Engineering College (Autonomous), Andhra Pradesh, India
2. Assistant Professor, CSE-AI& ML Department, Pragati Engineering College (Autonomous), Andhra Pradesh, India

Abstract
 The ever-evolving landscape of cybersecurity necessitates continuous advancements in malware analysis techniques. This study explores the deployment of the Grey Wolf Optimizer (GWO) algorithm as a novel bio-inspired optimization mechanism to address the challenges posed by modern malware threats. The primary objective is to enhance various facets of malware analysis, including feature selection, parameter optimization, and the overall efficacy of malware detection models. The study begins by introducing the GWO algorithm, elucidating its fundamental principles and mechanisms. It subsequently details how GWO can be effectively adapted to the realm of malware analysis, emphasizing its role in improving the selection of discriminative features and optimizing the parameters of machine learning models. In pursuit of empirical validation, a comprehensive experimental setup is presented, featuring diverse malware datasets, well-defined evaluation metrics, and baseline models for performance comparison. The experimental results unveil compelling findings: the deployment of GWO consistently yields substantial enhancements in the accuracy and resilience of malware detection systems. Notably, GWO exhibits remarkable effectiveness in addressing the dynamic and polymorphic nature of contemporary malware, making it a valuable asset for real-time threat identification. The significance of these discoveries has broad implications for both research and practical use in the realm of cybersecurity. The deployment of GWO emerges as a potent strategy for fortifying the capabilities of malware detection systems, rendering them more adaptive and proficient in discerning emerging threats. Furthermore, this study underscores the importance of exploring innovative, nature-inspired approaches, such as GWO, to keep pace
