<b>I Semester</b>	<b>Course Code: 24011T01</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVE**

The main objectives of the course is to study parallel computing hardware and programming models, performance analysis and modeling of parallel programs

**COURSE OUTCOMES**

On completion of the course, student will be able to–		Cognitive Level
CO1	Describe different parallel architectures inter-connect networks, programming models	K3
CO2	Develop an efficient parallel algorithm to solve given problem	K4
CO3	Analyze and measure performance of modern parallel computing systems	K4
CO4	Build the logic to parallelize the programming task	K3
CO5	Apply basics of CUDA programming and parallel algorithms	K3

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

CO	PO1	PO2	PO3	PSO1	PSO2
CO1	3	1	1	2	2
CO2	3	1	1	2	2
CO3	3	1	1	1	1
CO4	3	1	1	2	2
CO5	3	1	1	2	2

Unit I	<b>Introduction:</b> Motivating Parallelism, Scope of Parallel Computing, Parallel Programming Platforms: Implicit Parallelism, Trends in Microprocessor and Architectures, Limitations of Memory, System Performance, Dichotomy of Parallel Computing Platforms, Physical Organization of Parallel Platforms, Communication Costs in Parallel Machines, Scalable design principles, Architectures: N-wide superscalar architectures, Multi-core architecture.
Unit II	<b>Parallel Programming :</b> Principles of Parallel Algorithm Design: Preliminaries, Decomposition Techniques, Characteristics of Tasks and Interactions, Mapping Techniques for Load Balancing, Methods for Containing Interaction Overheads, Parallel Algorithm Models, The Age of Parallel Processing, the Rise of GPU Computing, A Brief History of GPUs, Early GPU.
Unit III	<b>Basic Communication:</b> Operations- One-to-All Broadcast and All-to-One Reduction, All-to-All Broadcast and Reduction, All-Reduce and Prefix-Sum Operations, Scatter and Gather, All- to-All Personalized Communication, Circular Shift, Improving the Speed of Some Communication Operations. Programming shared address space platforms: threads- basics, synchronization, OpenMP programming
Unit IV	Analytical Models: Sources of overhead in Parallel Programs, Performance Metrics for Parallel Systems, and The effect of Granularity on Performance, Scalability of Parallel Systems, Minimum execution time and minimum cost, optimal execution time. Dense Matrix Algorithms: MatrixVector Multiplication, Matrix-Matrix Multiplication.

**Pragati Engineering College (Autonomous)**  
**Department of Computer Science and Engineering**

Unit V	Parallel Algorithms- Sorting and Graph : Issues in Sorting on Parallel Computers, Bubble Sort and its Variants, Parallelizing Quick sort, All-Pairs Shortest Paths, Algorithm for sparse graph, Parallel Depth-First Search, Parallel BestFirst Search. CUDA Architecture : CUDA Architecture, Using the CUDA Architecture, Applications of CUDA Introduction to CUDA C- Write and launch CUDA C kernels, Manage GPU memory, Manage communication and synchronization, Parallel programming in CUDA- C.

<b>I Semester</b>	<b>Course Code: 24011T02</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES**

1	To Develop an application for what is involved in learning from data.
2	To Demonstrate a wide variety of learning algorithms.
3	To Demonstrate how to apply a variety of learning algorithms to data.
4	To Demonstrate how to perform evaluation of learning algorithms and model selection.

**COURSE OUTCOMES**

After the completion of the course, student will be able to Learn		<b>Cognitive Level</b>
CO1	Understand Domain Knowledge for Productive use of Machine Learning and Diversity of data.	K2
CO2	Analyze Demonstrate on Supervised and Computational Learning	K3
CO3	Analyze on Statistics in learning techniques and Logistic Regression	K3
CO4	Illustrate on Support Vector Machines and Perceptron Algorithm	K4
CO5	Analyze a Multilayer Perceptron Networks and classification of decision tree	K4

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

<b>M.Tech</b>	<b>ADVANCED DATABASES AND MINING</b>	<b>L</b>	<b>P</b>	<b>C</b>
<b>I Semester</b>	<b>Course Code: 24011T04</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES**

- To Study multidisciplinary field of data mining, the general data features, techniques for data preprocessing, general implementation of data warehouses and OLAP, the relationship between data warehousing and other generalization methods
- To Study different methods of clustering such as k-means, k-medoids, db scan algorithm, role of data mining in web mining.

**COURSE OUTCOMES**

Upon completion of the course, students should be able to:		<b>Cognitive Level</b>
CO1	Apply various normal forms for designing a database schema.	K3
CO2	Examine appropriate techniques for controlling the consequences of concurrent data access and to restrict unauthorized access, and also able to perform Query Optimization.	K2
CO3	Perform OLAP operations and apply data preprocessing strategies.	K3
CO4	Analyze data visualizations, and observe the patterns that can be discovered by association rule mining.	K4
CO5	Analyze and apply the appropriate classification/clustering techniques for solving real world problems.	K4

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

Unit I	An Overview of NoSQL: Review of the Relational Model, ACID Properties, Distributed Databases: Sharding and Replication, Consistency, The CAP Theorem, NoSQL Data Models. Four Types of NoSQL Database, Value of Relational Databases, Persistent Data, Concurrency, Integration, Impedance Mismatch, Application and Integration Databases, Attack of the Clusters, The Emergence of NoSQL, Key Points.
Unit- II	MongoDB: The Document Data Model, Documents and Collections, MongoDB Use Cases, Embedded Data Models, Normalized Data, Replication via Replica Sets, MongoDB Design, MongoDB and the CAP Theorem, The MongoDB Data Manipulation Language, Transactions, Atomicity, and Documents, Durability and Journaling, Batch Processing and Aggregation, Indexing, Auto-Sharding, Shard Keys, and Horizontal Scalability, Writing to Shards, MongoDB as a File System

**Pragati Engineering College (Autonomous)**  
**Department of Computer Science and Engineering**

Unit- III	Cassandra: The Column-Family Data Model, Databases and Tables, Columns, Types, and Keys, The Data Manipulation Language, Cassandra's Architecture, Key Spaces, Replication, and Column-Families, The CAP Theorem, Consistent Hashing, Managing Cluster Nodes
Unit- IV	Data preprocessing: cleaning, transformation, reduction, filters and discretization (demonstration with weka). Data mining algorithms: association rules, mining weather data, generating item sets and rules efficiently, correlation analysis. visualization techniques (demonstration with weka)
Unit- V	Classification & Clustering: ZeroR, OneR, Naïve Bayesian and Decision trees classification and evaluation (bootstrapping and k-fold cross validation) techniques. k-means, DBSCAN and Hierarchical clustering methods (demonstration with weka).

<b>I Semester</b>	<b>Course Code: 24011T06</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES**

<b>1</b>	To Understand Smart Objects and IoT Architectures.
<b>2</b>	To learn about various IOT-related protocols
<b>3</b>	To build simple IOT Systems using Arduino and Raspberry Pi.
<b>4</b>	To understand data analytics and cloud in the context of IOT
<b>5</b>	To develop IoT infrastructure for popular applications.

**COURSE OUTCOMES**

Upon completion of the course, students should be able to:		<b>Cognitive Level</b>
CO1	Summarize on the term 'internet of things' in different contexts.	K2
CO2	Analyze various protocols for IOT.	K4
CO3	Design a PoC of an IOT system using Rasperry Pi/Arduino	K6
CO4	Apply data analytics and use cloud offerings related to IOT.	K3
CO5	Analyze applications of IOT in real time scenario	K4

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

<b>I Semester</b>	<b>Course Code: 24011T08</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES**

1	To study Computer networks starting with OSI Reference Model, Protocols at different layers with special emphasis on IP, TCP & UDP and Routing algorithms.
2	Some of the major topics which are included in this course are CSMA/CD, TCP/IP implementation, LANs/WANs, internetworking technologies, Routing and Addressing.
3	Provide the mathematical background of routing protocols.
4	Aim of this course is to develop some familiarity with current research problems and research methods in advance computer networks.

**COURSE OUTCOMES**

Upon completion of the course, students should be able to:		Cognitive Level
CO1	Illustrate reference models with layers, protocols and interfaces.	K2
CO2	Describe the routing algorithms, Sub netting and Addressing of IP V4 and IPV6.	K2
CO3	Describe and Analysis of basic protocols of computer networks, and how they can be used to assist in network design and implementation.	K4
CO4	Describe the concepts Wireless LANs, WIMAX, IEEE 802.11, Cellular telephony and Satellite networks	K6
CO5	Describe the emerging trends in networks-MANETS and WSN	K2

<b>I Semester</b>	<b>Course Code: 24RM1T01</b>	<b>2</b>	<b>0</b>	<b>2</b>

**COURSE OBJECTIVES**

1	To analyze the Effective literature studies approaches, analysis, Plagiarism, Research ethics.
2	Able understand problem, Scope and objectives of research problem.
3	To learn and understand Traditional knowledge Case Studies, IPR and IITs

**COURSE OUTCOMES**

At the end of the course, student will be able to:		<b>Cognitive Level</b>
CO1	Demonstrate the research and its types, Reviewing literature. Identifying and defining research problem.	K3
CO2	Explaining research design methods, sampling techniques	K5
CO3	Evalating and development of measuring instruments, data collection and analysis methods	K5
CO4	Show the IPR protection provides an incentive to inventors for further research work and Investment in R & D, which leads to creation of new and better products, and in turn brings about, Economic growth and social benefits.	K2
CO5	Identify Research proposal, research report and evaluating research	K3

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

<b>CO</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PSO1</b>	<b>PSO2</b>

CO2	3	3	3	3	3
CO3	3	3	3	3	3
CO4	3	3	3	3	3
CO5	3	3	3	3	3

Unit I	Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem, Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations
Unit- II	Effective literature studies approaches, analysis, Plagiarism, Research ethics, Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

**Pragati Engineering College (Autonomous)**  
**Department of Computer Science and Engineering**

Unit- III	Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT
Unit- IV	Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications
Unit- V	New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

<b>Text Books</b>

<b>M.Tech</b>	<b>HIGH PERFORMANCE COMPUTING LABORATORY - 1</b>	<b>L</b>	<b>P</b>	<b>C</b>
<b>I Semester</b>	<b>Course Code: 24011L01</b>	<b>0</b>	<b>4</b>	<b>2</b>

**COURSE OBJECTIVES**

The main objectives of the course is to

1	To implement the concepts of Parallel Processing..
2	To develop Optimization techniques for serial code
3	To design Parallel Computing Paradigms.
4	To Implement Parallel Programming using OpenMP and MPI.

**COURSE OUTCOMES**

Upon completion of the course, students should be able to:		<b>Cognitive Level</b>
CO1	Understand the role of HPC in science and engineering.	K2
CO2	Be familiar with popular parallel programming paradigms	K2
CO3	Understand commonly used HPC platforms with particular reference to Cluster system.	K2

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

<b>CO</b>	<b>PO1</b>	<b>PO2</b>	<b>PO3</b>	<b>PSO1</b>	<b>PSO2</b>
CO1	3	3	3	2	3
CO2	3	3	2	3	2
CO3	3	3	3	3	2

**List of Experiments:**

1	Get familiar with OpenMP environment
2	Executing simple programs with OpenMp (vector addition, dot product)
3	Design and implement parallel Breadth First Search and Depth First search based on existing algorithms using OpenMP. Use a Tree or an undirected graph for BFS and DFS.
4	Write a program to implement parallel Bubble sort and Merge sort using OpenMP. Use existing algorithms and measure the performance of sequential and parallel algorithms.
5	Implement Min, Max, Sum and Average operations using Parallel Reduction
6	Write a CUDA Program for -Addition of two large vectors, -Matrix multiplication using CUDA C
7	Mini Project: Evaluate performance enhancement of parallel Quick sort Algorithm using MPI

**Pragati Engineering College (Autonomous)**

<b>M.Tech</b>	<b>Machine Learning Laboratory</b>	<b>L</b>	<b>P</b>	<b>C</b>
<b>I Semester</b>	<b>Course Code: 24011L02</b>	<b>0</b>	<b>4</b>	<b>2</b>

**COURSE OBJECTIVE**

This course will enable students to learn and understand different Data sets in implementing the machine learning algorithms.

**COURSE OUTCOMES**

Upon successful completion of the course, the student will be able to:		<b>Cognitive Level</b>
CO1	Design and Develop Python programs for various Learning algorithms	K2
CO2	Apply appropriate data sets to the Machine Learning algorithms	K3
CO3	Develop Machine Learning algorithms to solve real world problems	K4

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

CO	PO1	PO2	PO3	PSO1	PSO2
CO1	3	3	3	3	2
CO2	3	3	2	2	3
CO3	3	3	3	3	3

**List of Experiments**

1	Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
2	For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
3	Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
4	Exercises to solve the real-world problems using the following machine learning methods: a) Linear Regression b) Logistic Regression c) Binary Classifier
5	Develop a program for Bias, Variance, Remove duplicates, Cross Validation
6	Write a program to implement Categorical Encoding, One-hot Encoding
7	Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets.
8	Write a program to implement k-Nearest Neighbor algorithm to classify the iris data set. Print both correct and wrong predictions.
9	Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.
10	Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.
11	Apply EM algorithm to cluster a Heart Disease Data Set. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
12	Exploratory Data Analysis for Classification using Pandas or Matplotlib.
13	Write a Python program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set.
14	Write a program to Implement Support Vector Machines and Principle Component Analysis.
15	Write a program to Implement Principle Component Analysis.

<b>M.Tech</b>	<b>WRITING FOR RESEARCH PAPER</b>	<b>L</b>	<b>P</b>	<b>C</b>
<b>I Semester</b>	<b>Course Code: 24011A01</b>	<b>2</b>	<b>0</b>	<b>0</b>

**COURSE OBJECTIVES**

1	To improve your writing skills and level of Readability
2	Learn about what to write in each section
3	Understand the skills needed when writing a Title

**COURSE OUTCOMES**

At the end of the course, student will be able to		Cognitive Level
CO1	Understand writing skills and level of readability	K2
CO2	Analyzing about what to write in each section	K4
CO3	Applying the skills needed when writing a Title	K3
CO4	Analyzing the skills needed for writing	K4
CO5	Evalating skills needed to write the results	K5

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

<b>II Semester</b>	<b>Course Code: 24012T10</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVE**

To study the fundamentals of neural networks as well as some advanced topics such as recurrent neural networks, long short term memory cells and convolution neural networks.

**COURSE OUTCOMES**

After completion of course, students would be able to:		<b>Cognitive Level</b>
CO1	Explore feed forward networks and Deep Neural networks	K2
CO2	Mathematically understand the deep learning approaches and paradigms	K2
CO3	Apply the deep learning techniques for various applications	K3
CO4	Understand the concepts of CNN and RNN	K2
CO5	Implement Interactive Applications of Deep Learning	K3

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

<b>II Semester</b>	<b>Course Code: 24012T11</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES**

1	Understanding of the computational properties of natural languages and the commonly used algorithms for processing linguistic information.
2	Examines NLP models and algorithms using both the traditional symbolic and the more recent statistical approaches.
3	To describe the application based on natural language processing and to show the points of syntactic, semantic and pragmatic processing.

**COURSE OUTCOMES**

After completion of this course		<b>Cognitive Level</b>
CO1	Understanding a given text with basic Language features	K2
CO2	Creating an innovative application using NLP components	K6
CO3	Evaluating a rule based system to tackle morphology/syntax of a language	K5
CO4	Analyzing a tag set to be used for statistical processing for real-time applications	K4
CO5	Evaluate, Compare and contrast the use of different statistical approaches for different types of NLP applications.	K5

<b>II Semester</b>	<b>Course Code: 24012T13</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES**

This course is aimed at enabling the students to

- |   |  |
|---|--|
| 1 | Provide an overview of an exciting growing field of big data analytics.  |
| 2 | Introduce the tools required to manage and analyze big data like Hadoop, No SQL, Map Reduce, HIVE, Cassandra, Spark.       |
| 3 | Teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability. |
| 4 | Optimize business decisions and create competitive advantage with BigData analytics  |

**COURSE OUTCOMES**

After the completion of the course, student will be able to		Cognitive Level
CO1	Illustrate big data and its use cases from selected business domains.	K4
CO2	Interpret the applicability of NoSQL databases using Cassandra	K3
CO3	Analyze the big data using Hadoop, MapReduce, Hive and Apache Spark	K4
CO4	Implement real time processing with Spark Streaming for data intensive applications.	K4
CO5	Analyse the data analytics process with a case study	K3

Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

CO	PO1	PO2	PO3	PSO1	PSO2

<b>M.Tech</b>	<b>INFORMATION SECURITY</b>	<b>L</b>	<b>P</b>	<b>C</b>
<b>II Semester</b>	<b>Course Code: 24012T15</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVE**

To learn different encryption techniques along with hash functions, MAC, digital signatures and their use in various protocols for network security and system security.

**COURSE OUTCOMES**

Upon completion of this course, the students will be able to:		<b>Cognitive Level</b>
CO1	Identify the basic concepts of cryptography.	K3
CO2	Classify the symmetric encryption techniques.	K3
CO3	Apply various public key cryptography techniques, implement Hashing and Digital Signature.	K4
CO4	Design authentication applications and analyze network security protocols	K2
CO5	Apply security mechanisms to detect and prevent various attacks.	K3

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

<b>M.Tech</b>	<b>SOFTWARE RELIABILITY</b>	<b>L</b>	<b>P</b>	<b>C</b>
<b>II Semester</b>	<b>Course Code: 24012T16</b>	<b>3</b>	<b>0</b>	<b>3</b>

**COURSE OBJECTIVES**

The main objectives of the course is to

1	Understand the concepts and metrics related to software reliability.
2	Learn techniques for measuring, predicting, and improving software reliability.
3	Explore various models used in the analysis of software reliability.
4	Develop skills in designing reliable software systems.
5	Investigate practical applications and challenges in software reliability.

**COURSE OUTCOMES**

Upon completion of the course, students should be able to:		<b>Cognitive Level</b>
CO1	Explain the concepts and importance of software reliability.	K3
CO2	Apply statistical techniques for reliability measurement and prediction.	K3
CO3	Implement software reliability models and analyze their outputs.	K4
CO4	Design and implement strategies for improving software reliability.	K2
CO5	Evaluate the impact of software reliability on overall system performance.	K5

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

<b>II Semester</b>	<b>Course Code: 24012L03</b>	<b>0</b>	<b>4</b>	<b>2</b>

**COURSE OBJECTIVES**

1	Translate user requirements into the overall architecture and implementation of new systems and Manage Project and coordinate with the Client.
2	Writing optimized front end code HTML and JavaScript
3	Design and implementation of Robust and Scalable Front End Applications.

**COURSE OUTCOMES**

On completion of this course, the student will be able to		<b>Cognitive Level</b>
<b>CO1</b>	Implement the Basic Concepts of Web & Markup Languages.	K4
<b>CO2</b>	Develop web Applications using Scripting Languages Frameworks.	K3
<b>CO3</b>	Build applications using Express JS and Node JS frameworks	K4

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

**List of Experiments:**

<b>Experiment-1</b>	Develop static pages (using only HTML) of an online Book store. The pages should resemble: www.amazon.com. The website should consist of the following pages. Home page Registration and user Login, User profile page, Books catalog Shopping cart, Payment by credit card Order Confirmation
<b>Experiment-2</b>	Write an HTML page including any required JavaScript that takes a number from text field in the range of 0 to 999 and shows it in words. It should not accept four and above digits, alphabets and special characters.
<b>Experiment-3</b>	Develop and demonstrate JavaScript with POP-UP boxes and functions for the following problems: a) Input: Click on Display Date button using on click ( ) function Output: Display date in the textbox b) Input: A number n obtained using prompt Output: Factorial of n number using alert c) Input: A number n obtained using prompt Output: A multiplication table of numbers from 1 to 10 of n using alert Input: A number n obtained using prompt and add another number using confirm Output: Sum of the entire n numbers using alert

**Pragati Engineering College (Autonomous)**  
**Department of Computer Science and Engineering**

<b>Experiment-4</b>	Create a simple visual bean with a area filled with a color. The shape of the area depends on the property shape. If it is set to true then the shape of the area is Square and it is Circle, if it is false. The color of the area should be changed dynamically for every mouse click.
<b>Experiment-5</b>	Create an XML document that contains 10 users information. Write a Java Program, which takes User Id as input and returns the user details by taking the user information from XML document using DOM parser or SAX parser.
<b>Experiment-6</b>	Develop and demonstrate PHP Script for the following problems: a) Write a PHP Script to find out the Sum of the Individual Digits. b) Write a PHP Script to check whether the given number is Palindrome or not
<b>Experiment-7</b>	Implement the following in CSS a) Implementation of 'get' and 'post' methods. b) Implementation in colors, boarder padding. c) Implementation button frames tables, navigation bars.
<b>Experiment-8</b>	Implement the web applications with Database using a) PHP, b) Servlets and c) JSP.
<b>Experiment-9</b>	Write a program to design a simple calculator using a) JavaScript b) PHP c) Servlet and d) JSP.
<b>Experiment-10</b>	Create registration and login forms with validations using Jscript query.
<b>Experiment-11</b>	Jscript to retrieve student information from student database using databaseconnectivity.
<b>Experiment-12</b>	Implement the following in React JS a) Using React Js creating constructs data elements. b) Using React Js implementations DoM.
<b>Experiment-13</b>	Implement the following in Angular JS a) Angular Js data binding. b) Angular JS directives and Events. c) Using angular Js fetching data from MySQL.
<b>Experiment-14</b>	Develop and demonstrate Invoking data using Jscript from Mongo DB
<b>Experiment-15</b>	Create an Online fee payment form using JScript and MangoDB.

<b>M.Tech</b>	<b>DEEP LEARNING LABORATORY</b>	<b>L</b>	<b>P</b>	<b>C</b>
<b>II Semester</b>	<b>Course Code: 24012L04</b>	<b>0</b>	<b>4</b>	<b>2</b>

**COURSE OBJECTIVE**

Understand the context of neural networks and deep learning

**COURSE OUTCOMES**

Upon successful completion of the course, the student will be able to:		Cognitive Level
<b>CO1</b>	Implement deep neural networks to solve real world problems	K3
<b>CO2</b>	Choose appropriate pre-trained model to solve real time problem	K3
<b>CO3</b>	Interpret the results of two different deep learning models	K3

K1- Remembering, K2- Understanding, K3-Applying, K4- Analyzing, K5- Evaluating, K6- Creating

CO	PO1	PO2	PO3	PSO1	PSO2
CO1	3	1	2	2	2
CO2	3	1	2	2	2
CO3	3	1	2	2	2

**Software Packages required:**

1) Keras 2) Tensorflow 3) PyTorch

**List of Experiments:**

Experiment-1	Implement multilayer perceptron algorithm for MNIST Hand written Digit Classification.
Experiment-2	Design a neural network for classifying movie reviews (Binary Classification) using IMDB dataset
Experiment-3	Design a neural Network for classifying news wires (Multi class classification) using Reuters dataset.
Experiment-4	Build a Convolution Neural Network for MNIST Hand written Digit Classification.
Experiment-5	Build a Convolution Neural Network for simple image (dogs and Cats) Classification
Experiment-6	Use a pre-trained convolution neural network (VGG16) for image classification
Experiment-7	Implement one hot encoding of words or characters.
Experiment-8	Implement word embeddings for IMDB dataset.
Experiment-9	Implement a Recurrent Neural Network for IMDB movie review classification problem.
