CLOUD COMPUTING OVERVIEW

Cloud computing is the delivery of computing services such as servers, storage, databases, networking and software over the internet.

It allows users to access resources on demand without owning or maintaining physical infrastructure.

Cloud computing provides scalability, flexibility, cost efficiency and high availability, making it suitable for businesses, educational institutions and individuals.

VIRTUALIZATION IN CLOUD COMPUTING OVERVIEW

Virtualization is the technology that enables multiple virtual machines (VMs) to run on a single physical server using a hypervisor.

It improves hardware utilization, reduces operational costs, and allows efficient allocation of computing resources.

As the foundation of cloud computing, virtualization supports resource isolation, scalability, and simplified management of cloud environments.
