(AUTONOMOUS)

DEPARTMENT OF INFORMATION TECHNOLOGY & CSE(CYBER SECURITY)

Date:25-08-2026

CIRCULAR

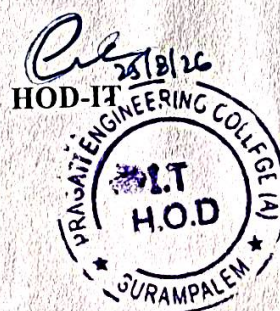

It is hereby informed to all the II B.Tech students of Information Technology (IT) and Computer Science & Engineering (Cyber Security) that our department is organizing a Two-Day Workshop on "MICROSOFT AZURE: ADVANCED CLOUD ARCHITECTURE, INFRASTRUCTURE & ENGINEERING" on 28-08-2026 and 29-08-2026.

All II B.Tech IT and CSE (Cyber Security) students are required to attend the workshop without fail with your own laptop. The workshop will be conducted in offline mode.

Mode: Offline

Venue: F-15

FACULTY CO-ORDINATOR

Department of Information Technology & CSE (Cyber Security)

REPORT

Topic: MICROSOFT AZURE: ADVANCED CLOUD ARCHITECTURE,
INFRASTRUCTURE & ENGINEERING

Date: 28-08-2026 to 29-08-2026

Venue: F-15

Microsoft Azure is Microsoft's cloud computing platform that provides a wide range of services for developing, deploying, and managing applications through Microsoft-managed data centers.

Azure supports different cloud computing models such as Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). It also supports modern technologies including containers, Kubernetes, serverless computing, artificial intelligence, Internet of Things (IoT), big data, and DevOps.

The concept of Advanced Cloud Architecture, Infrastructure & Engineering deals with designing complete cloud environments rather than using individual cloud services. It focuses on how compute, storage, networking, security, databases, monitoring, automation, and application services work together.

Azure Cloud Architecture

Cloud architecture represents the overall structure of a cloud-based system. It describes how different resources communicate with each other and how applications are deployed and managed.

A typical Azure application may contain:

Users → Internet → Load Balancer → Application → Database → Storage

For example, when a user accesses an online shopping application:

1. The user sends a request through the Internet.
2. Azure networking services receive the request.
3. A load balancer distributes traffic.
4. Application servers process the request.
5. The application communicates with a database.
6. Product images and other files may be stored in Azure Storage.
7. Monitoring services continuously monitor the application.

This architecture can be expanded with security, caching, backup, analytics, and automated deployment.

Azure Compute

Compute services provide the processing power required to run applications.

Important Azure compute services include:

Azure Virtual Machines

Virtual Machines provide virtualized servers in the cloud.

They are useful when organizations need significant control over:

- Operating system

PRAGATI ENGINEERING COLLEGE

(AUTONOMOUS)

Learning is Supreme Duty

DEPARTMENT OF INFORMATION TECHNOLOGY & CSE(CYBER SECURITY)

- Software
- Networking
- Storage
- Server configuration

Azure Networking:

Networking is one of the most important components of Azure architecture.

Azure Virtual Network:

An Azure Virtual Network (VNet) provides an isolated networking environment for Azure resources.

A VNet can contain:

- Subnets
- Virtual machines
- Network interfaces
- Route tables
- Network security controls

Azure Database Services

Azure provides both relational and NoSQL database services.

Azure SQL Database

A managed relational database service based on Microsoft SQL Server technology.

It can be used for:

- Banking applications
- E-commerce
- Enterprise applications
- Student management systems
- Business applications
